OF

BIRDS' EGGS

IN THE

BRITISH MUSEUM
(NATURAL HISTORY).

VOLUME IV.

CARINATÆ (PASSERIFORMES continued).

BY

EUGENE W. OATES.

ASSISTED BY

CAPT. SAVILE G. REID.

LONDON:

PRINTED BY ORDER OF THE TRUSTEES.

SOLD BY

LONGMANS & Co., 39 PATERNOSTER ROW, E.C.;

B. QUARITCH, 15 PICCADILLY, W.; DULAU & Co., 37 SOHO SQUARE, W.;

KEGAN PAUL & Co., 43 GERRARD STREET, W.;

AND AT THE

BRITISH MUSEUM (NATURAL HISTORY), CROMWELL ROAD, S.W.

1905.

P R E F A C E.

I HAVE again been indebted to Captain Savile G. Reid for his assistance in the preparation of the present volume, and for the additions which he has made to Mr. Oates' original MSS. The valuable collections which the Museum has received during the past two years have greatly added to the importance of the present volume. The donations of Mr. W. Radcliffe Saunders and Mr. C. B. Rickett have been especially valuable.

E. RAY LANKESTER,
Director.

British Museum (Natural History),
February 22, 1905.

INTRODUCTION.

THE fourth volume of the Catalogue of Eggs corresponds with the fourth volume of Dr. Bowdler Sharpe's 'Hand-list of Birds.'

The total number of species is 620, and the number of eggs catalogued 14,917, as shown in the following table:—

Family.	No. of species.	No. of specimens of eggs.
Timeliidæ	166	1873
Troglodytidæ	37	481
Cinclidæ	8	105
Mimidæ	21	306
Turdidæ	73	3795
Sylviidæ	149	5173
Vireonidæ	12	93
Ampelidæ	2	56
Artamidæ	9	129
Vangidæ	2	11
Prionopidæ	17	144
Laniidæ	65	1466
Paridæ	37	702
Chamæidæ	1	3
Regulidæ	5	250
Sittidæ	11	232
Certhiidæ	5	98
Total	<u>620</u>	<u>14,917</u>

I am indebted to Mr. W. R. Ogilvie-Grant for much kind assistance in cataloguing and arranging the specimens in the present volume.

SAVILE G. REID.

February 20, 1905.

CATALOGUE
OF
BIRDS' EGGS.
VOL. IV.

Sub-Class **CARINATÆ.**

Order PASSERIFORMES.

Sub-Order *ACROMYODI* (continued).

PASSERES NORMALES (*continued*).

Family TIMELIIDÆ.

Genus **ORTHONYX**, *Temm.*

Orthonyx temmincki, *Vig. & Horsf.*

- Orthonyx spinicaudus*, *Gould, Handb. Birds Austr.* i. p. 607 (1865);
North, Nests & Eggs Austr. Birds, p. 151 (1889).
Orthonyx spinicauda, *Sharpe, Cat. Birds B. M.* vii. p. 329 (1883); *Campbell, Nests & Eggs Austr. Birds*, i. p. 252 (1901).
Orthonyx temmincki, *Sharpe, Hand-l.* iv. p. 2 (1903).

The eggs of the Spine-tailed Log-runner are of an elliptical form, moderately glossy, and of a plain white colour. Three eggs measure respectively: 1·07 by ·76; 1·13 by ·8; 1·17 by ·8.

|--------------------------------------|-------------|
| 1. New South Wales (<i>Wilson</i>) | Gould Coll. |
| 2. New South Wales (<i>Allen</i>). | Gould Coll. |

Genus **CINCLOSOMA**, *Vig. & Horsf.*

Cinclosoma punctatum (*Lath.*).

- Cinclosoma punctatum*, *Thien. Fortpflanz. ges. Vög.* tab. xxvii. fig. 6 (1845-54); *Gould, Handb. Birds Austr.* i. p. 433 (1865); *Sharpe, Cat. Birds B. M.* vii. p. 332 (1883); *North, Nests & Eggs Austr.*

Birds, p. 151, pl. xi. fig. 10 (1889); *Nehrke. Kat. Eiersamml.* p. 58 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 254, pl. 10 (1901); *Sharpe, Hand-l.* iv. p. 2 (1903).

The eggs of the Spotted Ground-bird in the Collection vary in form from an elongated to a broad oval. They have a considerable amount of gloss. The ground is cream-coloured, and this is rather closely and evenly spotted and blotched with olive-brown and very dark chocolate, and equally numerous underlying markings of pale purple-grey. They measure from 1.25 to 1.42 in length, and from .91 to .96 in breadth.

Cinclosoma castanonotum, Gould.

(Plate III. fig. 14.)

Cinclosoma castanotis, *Thien. Fortpflanz. ges. Vög.* tab. xxvii. fig. 7, a, b (1845-54).

Cinclosoma castaneonotum, *Gould, Handb. Birds Austr.* i. p. 435 (1865).

Cinclosoma castanonotum, *Sharpe, Cat. Birds B. M.* vii. p. 333 (1883); *Campbell, Nests & Eggs Austr. Birds*, i. p. 256 (1901); *Sharpe, Hand-l.* iv. p. 2 (1903).

The eggs of the Chestnut-backed Ground-bird vary from a regular to a blunt oval form and very closely resemble in coloration the eggs of *C. punctatum*, being perhaps on the average rather more thickly spotted. Five specimens measure from 1.18 to 1.25 in length, and from .88 to .90 in breadth.

Genus **EUPETES**, Temm.

Eupetes pulcher, Sharpe.

Eupetes castanonotus, *Salvad. pt.*; *Sharpe, Cat. Birds B. M.* vii. p. 340 (1883).

Eupetes pulcher, *Sharpe, Hand-l.* iv. p. 3 (1903).

An egg of the Chestnut-backed *Eupetes* in the Collection is of a broadish oval form. The ground-colour is pale pinkish brown, somewhat heavily marked at the larger end with underlying blotches of purple-grey, a few longitudinal streaks and dashes of which colour also occur on the other parts of the surface; the overlying blotches, also longitudinal, of rich brown are evenly and not very thickly distributed over the whole egg. It measures 1.15 by .87 inch.

|---------------------|---------------------|
| 1. S.E. New Guinea. | Mr. E. Weiske [C.]. |
|---------------------|---------------------|

Eupetes incertus, Salvad.

Eupetes incertus, Sharpe, Cat. Birds B. M. vii. p. 341 (1883); id. Hand-l. iv. p. 13 (1903).

An egg of Salvadori's *Eupetes* in the Collection is white, with a few underlying markings of pale lavender at the larger end, the whole surface being sparingly dotted with dark madder-brown, larger spots of which colour occur somewhat more thickly towards the larger end. It is of a regular oval form, and measures 1·13 by ·82 inch.

1. S.E. New Guinea.

Mr. E. Weiske [C.].

Eupetes lorix, Salvad.

(Plate III. fig. 11.)

Eupetes lorix, Sharpe, Hand-l. iv. p. 3 (1903).

The only egg of the Black-throated *Eupetes* in the Collection is of a regular oval form, with a very slight amount of gloss. The ground-colour is a warm pinkish brown; it is sparingly marked, at the larger end chiefly, with longitudinal blotches of purple-grey, the surface-markings being rich brown, mostly collected together at the larger end in the form of an interrupted ring or zone of blotches and spots. It measures 1·28 by ·95 inch.

1. S.E. New Guinea.

Mr. E. Weiske [C.].

Genus DRYMAÆDUS, Gould.***Drymaedus superciliaris, Gould.***

(Plate III. fig. 16.)

Drymodes superciliaris, Gould, Handb. Birds Austr. i. p. 291 (1865); North, Nests & Eggs Austr. Birds, p. 107 (1889).

Drymaedus superciliaris, Sharpe, Cat. Birds B. M. vii. p. 344 (1883); Campbell, Nests & Eggs Austr. Birds, i. p. 262 (1901); Sharpe, Hand-l. iv. p. 4 (1903).

The eggs of the Eastern Scrub-Robin are of a broad, blunt oval shape, and they have a small amount of gloss. The ground is of a dull white colour; in one egg this is very thickly speckled and spotted with brown and pale purple; in a second egg the ground is spotted and blotched with brown and pale purple, and far more of the ground is visible than in the first egg. Two eggs measure respectively: ·98 by ·68; 1·02 by ·7.

2. Cape York, Australia, 17th Nov.
(*J. Macgillivray*).

Gould Coll.

Genus **HYLACOLA**, Gould.**Hylacola cauta**, Gould.

(Plate III. fig. 17.)

Hylacola cauta, Gould, *Handb. Birds Austr.* i. p. 347 (1865); Sharpe, *Cat. Birds B. M.* vii. p. 347 (1883); Nehrke, *Kat. Eiersamml.* p. 58 (1899); Campbell, *Nests & Eggs Austr. Birds*, i. p. 264, pl. 11 (1901); Sharpe, *Hand-l.* iv. p. 4 (1903).

An egg of the Rufous-rumped Ground-Wren in the Collection is of a broad oval shape and moderately glossy. It is of a purplish-brown colour, mottled, almost entirely at the broad end, with a darker shade of the same. It measures .86 by .65.

1. Gippsland, Victoria. F. A. Philbrick, Esq., K.C. [P.].

Genus **PSOPHODES**, Vig. & Horsf.**Psophodes crepitans** (Lath.).

Psophodes crepitans, Gould, *Handb. Birds Austr.* i. p. 312 (1864); Sharpe, *Cat. Birds B. M.* vii. p. 350 (1883); North, *Nests & Eggs Austr. Birds*, p. 72, pl. viii. fig. 7 (1889); Nehrke, *Kat. Eiersamml.* p. 58 (1899); Campbell, *Nests & Eggs Austr. Birds*, i. p. 265, pl. 11 (1901); Sharpe, *Hand-l.* iv. p. 5 (1903).

The eggs of the Coach-whip Bird are of a regular oval form and are almost devoid of gloss. The ground is of an exceedingly pale greenish-white colour or pale greenish blue, and this is sparingly marked, except at the broad end of the egg, where the markings are more numerous and form an indistinct cap, with specks, spots, small blotches, and short scrawls of black and underlying pale purple. They measure from 1.08 to 1.2 inch in length, and from .78 to .83 in breadth.

Genus **TROCHALOPTERUM**, *Blyth*.

Trochalopterum variegatum (*Vig.*).

(Plate III. fig. 19.)

Trochalopterum variegatum, *Sharpe, Cat. Birds B. M.* vii. p. 359 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 95 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 59 (1889); *Sharpe, Hand-l.* iv. p. 6 (1903).

The eggs of the Eastern Variegated Laughing-Thrush are of an oval form, and they possess a considerable amount of gloss. The ground is of a greenish-blue colour, and this is speckled and spotted with reddish and yellowish brown, of varying degrees of intensity. In some eggs the markings are spread all over the shell, but are most numerous at the thick end; in others the markings are restricted to one or two large spots and a very few specks, and these are so dark as to appear to be of a black colour. The eggs vary from 1 to 1·15 in length, and from ·76 to ·82 in breadth.

***Trochalopterum phœniceum* (*Gould*).**

(Plate I. fig. 1.)

Trochalopterum phœniceum, *Sharpe, Cat. Birds B. M.* vii. p. 371 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 93 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 58 (1889); *Nehrk. Kat. Eiersamml.* p. 59 (1890); *Sharpe, Hand-l.* iv. p. 8 (1903).

The eggs of the Crimson-winged Laughing-Thrush vary from a narrow to a broad oval form, and they have a large amount of gloss. The ground-colour is of a pale blue, and this is sparingly marked with an infinite variety of spots, blotches, dashes, scrawls, and hieroglyphic-like lines of chocolate-brown, reddish brown and black. Intermingled with these are some small underlying spots of pale purple. Although the markings are larger and more numerous at the large end than elsewhere, there is no general tendency for these to coalesce and form a cap. The eggs measure from .98 to 1.15 in length, and from .7 to .82 in breadth.

| 1. Kuatun, Fohkien, China, June | C. B. Rickett, Esq. [P]. |
| (<i>J. D. La Touche</i>). | |

Genus **ARGYA**, *Less*.

The eggs of the birds of this genus are normally of a regular oval form, but it is not unusual to meet with eggs which are of an elliptical or spheroidal shape. They are highly glossy.

The eggs of all are of a rather dark unspotted blue, varying in intensity of tint even in those of the same species. In fact, when large series of eggs are examined, it will be found that a gradual blending of colour takes place between the eggs of one species and those of another. The eggs also vary immensely in size.

Argya subrufa (Jerd.).

(Plate I. fig. 2.)

Argya subrufa, Sharpe, *Cat. Birds B. M.* vii. p. 390 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 109 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 74 (1889); *Nehrke. Kat. Eiersamml.* p. 59 (1899); *Sharpe, Hand-l.* iv. p. 11 (1903).

Three eggs of the Large Rufous Babbler measure respectively :
 .96 by .74; .96 by .74; .95 by .74.

Pomatorhinus temporalis, Vig. & Horsf.

Pomatorhinus trivirgatus, *Thien. Fortpflanz. ges. Vög.* tab. xxvii. fig. 9, a, b (1845-54).

Pomatostomus temporalis, *Gould, Handb. Birds Austr.* i. p. 479 (1865); *North, Nests & Eggs Austr. Birds*, p. 154, pl. ix. fig. 7 (1889).

Pomatorhinus temporalis, *Ramsay, Trans. Phil. Soc. N.S.W.* 1865, pl. i. fig. 1; *Sharpe, Cat. Birds B. M.* vii. p. 418 (1883); *Nehrke, Kat. Eiersamml.* p. 60 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 270, pl. 11 (1901); *Sharpe, Hand-l.* iv. p. 14 (1903).

The eggs of the Australian Scimitar Babbler are for the most part nearly elliptical, but some are of a long oval form. The shell has a fine texture and considerable gloss. The ground-colour is of a pale creamy-buff, and this is covered with a network of hair-lines, veins, and smudges of very dark purplish brown. The markings for the most part extend across the shell, producing in many cases the appearance of marble. They measure from 1.02 to 1.21 in length, and from .72 to .80 in breadth.

Pomatorhinus superciliosus, Vig. & Horsf.

Pomatorhinus superciliosus, *Thien. Fortpflanz. ges. Vög.* tab. xxvii. fig. 8 (1845-54); *Ramsay, Trans. Phil. Soc. N.S.W.* 1865, p. 318, pl. i. fig. 2; *Sharpe, Cat. Birds B. M.* vii. p. 419 (1883); *Nehrke, Kat. Eiersamml.* p. 60 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 272, pl. 11 (1901); *Sharpe, Hand-l.* iv. p. 14 (1903).

Pomatostomus superciliosus, *Gould, Handb. Birds Austr.* i. p. 482 (1865); *North, Nests & Eggs Austr. Birds*, p. 156 (1889).

The eggs of the Australian White-browed Scimitar Babbler vary from a rounded to a regular oval form; some are glossy, others very

slightly so. They are of the same type as the eggs of *P. temporalis*, but smaller. The ground-colour varies from greyish olive to light brown, and this is marked, more or less thickly, with hair-lines, veins and smudges of deep brown or black. They measure from .90 to 1.02 in length, and from .65 to .75 in breadth.

| 1. Kuatun, Fohkien, China, 26th April (<i>J. D. La Touche</i>). | C. B. Rickett, Esq. [P.]. |

Pomatorhinus hypoleucus (Blyth).

Pomatorhinus hypoleucus, Sharpe, *Cat. Birds B. M.* vii. p. 428 (1883); Oates, *Fauna Brit. Ind., Birds*, i. p. 126 (1889); Stuart Baker, *Journ. Bombay Nat. Hist. Soc.* viii. p. 179 (1893); Sharpe, *Hand-l.* iv. p. 15 (1903).

Three eggs of the Aracan Scimitar Babbler are pure white and glossy, but vary considerably in form: one is of a narrow oval, the

second almost perfectly elliptical, and the third of the regular oval type. They measure respectively: 1·01 by ·72; 1·01 by ·73; 1·06 by ·76.

3. Hailakandy, Cachar, 12th April. E. C. Stuart Baker, Esq. [C.].

Pomatorhinus erythrogenys, Vig.

Pomatorhinus erythrogenys, *Sharpe, Cat. Birds B. M.* vii. p. 430 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 124 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, p. 87 (1889); *Nehrke, Kat. Eiersamml.* p. 90 (1899); *Sharpe, Hand-l.* iv. p. 16 (1903).

The eggs of the Rusty-cheeked Scimitar Babbler are mostly of a broad oval form, but some are elliptical and others biconical. The amount of gloss is variable, some eggs being very glossy and others almost devoid of it. The eggs are spotless white, and measure from 1 to 1·2 in length, and from ·73 to ·85 in breadth.

Pomatorhinus maclellandi, Jerdon.

Pomatorhinus maclellandi, *Sharpe, Cat. Birds B. M.* vii. p. 431 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 125 (1889); *Stuart Baker, Journ. Bombay Nat. Hist. Soc.* viii. p. 179 (1893); *Sharpe, Hand-l.* iv. p. 16 (1903).

The eggs of McClelland's Scimitar Babbler in the Collection are of a regular oval form, with considerable gloss, and pure white. They measure from 1·05 to 1·04 in length, and from ·72 to ·79 in breadth.

3. Ninglo Peak, N. Cachar (4500 ft.), E. C. Stuart Baker, Esq. [C.].
16th May.

Genus XIPHORHAMPHUS, Blyth.

Xiphorhamphus superciliaris, Blyth.

Xiphorhamphus superciliaris, *Sharpe, Cat. Birds B. M.* vii. p. 433 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 128 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 89 (1889); *Sharpe, Hand-l.* iv. p. 16 (1903).

The eggs of the Slender-billed Scimitar Babbler are of a somewhat

narrow oval shape, fairly glossy and pure white. Four eggs measure from 1 to 1.05 in length, and from .7 to .75 in breadth:

2. Mongphoo, Darjiling (*J. Gammie*). Hume Coll.
2. Sikhim, 7000 feet, 29th April * Hume Coll.
(*J. G.*).

Genus **GARRULAX**, *Less.*

The eggs of this genus are unspotted, and vary in colour from dark blue, through all intermediate shades of blue, to pure white.

Garrulax leucolophus, *Hardw.*

Garrulax leucolophus, *Sharpe, Cat. Birds B. M.* vii. p. 435 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 77 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 47 (1889); *Nehrk. Kat. Eiersamml.* p. 60 (1899); *Sharpe, Hand-l.* iv. p. 17 (1903).

The eggs of the Himalayan White-crested Laughing-Thrush are mostly very short broad ovals, and some of them are spheroidal in shape. They are very glossy and pure white. They measure from 1.03 to 1.15 in length, and from .8 to .95 in breadth.

Genus **CALAMANTHUS**, *Gould*.

Calamanthus fuliginosus (*Vig. & Horsf.*).

Calamanthus fuliginosus, *Gould, Handb. Birds Austr.* i. p. 388 (1865); *Sharpe, Cat. Birds B. M.* vii. p. 501 (1883); *North, Nests & Eggs Austr. Birds*, p. 147 (1889); *Nehrke. Kat. Eiersamml.* p. 62 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 278, pl. 11 (1901); *Sharpe, Hand-l.* iv. p. 25 (1903).

The eggs of the Australian Striated Babbler are of a pointed oval shape and very glossy. They are of a pinkish-buff colour, blotched

and clouded, especially at the broad end, with purplish brown and lavender. They measure from .85 to .9 in length, and from .67 to .71 in breadth.

Calamanthus campestris (*Gould*).

(Plate I. fig. 11.)

Calamanthus campestris, *Gould, Handb. Birds Austr.* i. p. 389 (1865); *Sharpe, Cat. Birds B. M.* vii. p. 502 (1883); *North, Nests & Eggs Austr. Birds*, p. 148 (1889); *Nehrke, Kat. Eiersamml.* p. 62 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 279 (1901); *Sharpe, Hand-l.* iv. p. 25 (1903).

The eggs of the Australian Field Babbler resemble those of *C. fuliginosus*, but are somewhat more richly coloured. Two specimens, however, in the Collection are of a light chocolate colour, with a darker zone round the broad end of the egg. Specimens measure from .75 to .82 in length, and from .57 to .62 in breadth.

Genus **CINCLORHAMPHUS**, *Gould*.

Cinclorhamphus cruralis (*Vig. & Horsf.*).

Cinclorhamphus cruralis, *Gould, Handb. Birds Austr.* i. p. 394 (1865); *Sharpe, Cat. Birds B. M.* vii. p. 498 (1883); *North, Nests & Eggs Austr. Birds*, p. 152 (1889); *Nehrke, Kat. Eiersamml.* p. 62 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 275, pl. 11 (1901); *Sharpe, Hand-l.* iv. p. 26 (1903).

Cinclorhamphus cantillans, *Gould, tom. cit.* p. 395; *Ramsay, Ibis*, 1866, p. 328.

The eggs of the Australian Black-breasted Babbler are of a pointed oval shape, moderately glossy, and of very variable size. They are of two types: in one, the commonest, the ground-colour is pinkish white, thickly speckled and mottled with rufous and lavender or lilac; in the other the ground-colour is pinkish white, mottled with pale lavender only. Specimens measure from .87 to 1.02 in length, and from .66 to .7 in breadth.

Cinclorhamphus rufescens (*Vig. & Horsf.*).

Ptenoedus rufescens, *Gould, Handb. Birds Austr.* i. p. 397 (1865).

Cinclorhamphus rufescens, *Sharpe, Cat. Birds B. M.* vii. p. 500 (1883); *North, Nests & Eggs Austr. Birds*, p. 153 (1889); *Nehrke, Kat. Eiersamml.* p. 62 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 276, pl. 11 (1901); *Sharpe, Hand-l.* iv. p. 26 (1903).

The eggs of the Australian Rufous Babbler vary from blunt to pointed oval in shape, are moderately glossy and variable in size. The ground-colour ranges from pinkish white to salmon-pink, and this is thickly speckled and blotched with rich chestnut and lavender. The markings are fine on some examples, coarse and blotchy on others. The largest specimen in the Collection measures .9 by .7; the smallest .8 by .6.

Genus **TIMELIA**, *Horsf.*

Timelia jerdoni, *Wald.*

(Plate I. fig. 19.)

Timelia pileata, *Sharpe, Cat. Birds B. M.* vii. p. 507 (1883) [part.]; *Oates, Fauna Brit. Ind., Birds*, i. p. 132 (1889) [part.]; *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 90 (1889); *Nehrke, Kat. Eiersamml.* p. 62 (1899).

Timelia jerdoni, *Sharpe, Hand-l.* iv. p. 26 (1903).

The eggs of Jerdon's Red-capped Babbler are normally of a broad oval form, but a few are lengthened and some approach the spheroidal shape. They have a considerable amount of gloss.

The ground is white, and this is pretty thickly speckled and blotched, more so at the thicker end than elsewhere, with reddish brown and chocolate-brown. Intermingled with these markings are numerous small spots of underlying pale purple. The eggs measure from .7 to .75 in length, and from .55 to .6 in breadth.

Genus **PYCTORHIS**, *Hodgs.*

Pyctorhis sinensis (*Gmel.*).

(Plate I. figs. 16 & 18.)

Pyctorhis sinensis, *Sharpe, Cat. Birds B. M.* vii. p. 510 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 137 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 95 (1889); *Nehrk. Kat. Eiersamml.* p. 62 (1899); *Sharpe, Hand-l.* iv. p. 26 (1903).

The eggs of the Yellow-eyed Babbler are mostly of a short broad oval form, very frequently almost spherical, and very glossy. The ground varies from a pinkish white to a rich salmon-pink, with underlying spots and blotches of lavender-grey. The surface-markings are of a rich chestnut, reddish-brown or maroon colour, and vary much in shape and distribution over the shell. In one, not uncommon, type, these consist of dots and small specks, and occasionally streaks, thickly spread over the whole egg. In another type, the markings consist of large confluent clouds, smears and blotches, combined with a few lines. In a third type, the markings consist of well-defined spots, scrawls, and hieroglyphic-like figures, somewhat sparingly distributed over the shell. The eggs measure from .65 to .8 in length, and from .53 to .68 in breadth.

Pyctorhis nasalis, Legge.

Pyctorhis nasalis, Legge, *Birds Ceylon*, p. 512, pl. 34. fig. 4 (1879); Sharpe, *Cat. Birds B. M.* vii. p. 512 (1883); Oates, *Fauna Brit. Ind., Birds*, i. p. 138 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 98 (1889); Sharpe, *Hand-l.* iv. p. 26 (1903).

The eggs of the Ceylon Yellow-eyed Babbler in the Collection closely resemble those of the first type of the preceding species, being somewhat thickly spotted and blotched with rich reddish brown. They measure respectively: .71 by .57; .72 by .57.

2. Ceylon, 10th April (*A. L. Butler*). Crowley Bequest.

Genus *OPHRYDORNIS*, Büttikofer.

Ophrydornis albigularis (Blyth).

(Plate I. fig. 22.)

Dumetia albigularis, Legge, *Birds Ceylon*, p. 505 (1879).

Dumetia albigularis, Sharpe, *Cat. Birds B. M.* vii. p. 514 (1883); Oates, *Fauna Brit. Ind., Birds*, i. p. 134 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 94 (1889); *Nehrk. Kat. Eiersamml.* p. 62 (1899).

Ophrydornis albigularis, Sharpe, *Hand-l.* iv. p. 27 (1903).

The eggs of the Small White-throated Babbler are of an elongated oval form, and glossy. The ground is white, occasionally tinged with pink, and this is closely speckled with a profusion of deep reddish-brown spots, which are more frequent at the larger end than elsewhere and form a zone or cap, more or less distinct.

A few pale purple specks are also spread over the shell. The eggs measure from .66 to .8 in length, and from .5 to .55 in breadth.

Genus **DUMETIA**, *Blyth*.

Dumetia hyperythra (*Frankl.*).

Dumetia hyperythra, *Sharpe, Cat. Birds B. M.* vii. p. 515 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 133 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 92 (1889); *Sharpe, Hand-l.* iv. p. 27 (1903).

The eggs of the Rufous-bellied Babbler closely resemble those of the preceding species, but they are smaller, and somewhat broader in relation to their length. The ground-colour varies from white to a pronounced pink, and the markings on many eggs are much coarser than on those of the allied species. The eggs measure from .6 to .7 in length, and from .5 to .56 in breadth.

Genus **PELLORNEUM**, *Swains.***Pellorneum mandellii**, *Blanf.*

- Pellorneum nipalense*, *Sharpe, Cat. Birds B. M.* vii. p. 518 (1883); *Nehrck. Kat. Eiersamml.* p. 62 (1899).
Pellorneum mandellii, *Oates, Fauna Brit. Ind., Birds*, i. p. 140 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 99 (1889); *Stuart Baker, J. Bomb. N. H. Soc.* viii. p. 180 (1893); *Sharpe, Hand-l.* iv. p. 29 (1903).

The eggs of Mandelli's Spotted Babbler are of a blunt oval shape, and exhibit a slight gloss. The ground is white, and this is very thickly speckled with chocolate-brown and reddish brown. These markings are larger and more numerous at the thick end of the egg, where they usually form an indistinct cap. The shell is also marked with some pale purple underlying specks. The eggs measure from .81 to .9 in length, and from .61 to .66 in breadth.

Genus **BERNIERIA**, *Bonap.*

Bernieria madagascariensis (*Gmel.*).

(Plate I. fig. 17.)

Bernieria madagascariensis, *Milne-Edwards & Grandidier, Hist. Nat. Madag., Ois.* p. 349 (1879); *Cowan, Proc. R. Phys. Soc. Edin.* vii.

p. 148 (1882); *Sharpe, Cat. Birds B. M.* vii. p. 529 (1883); *Nehr. Kat. Eiersamml.* p. 63 (1899); *Sharpe, Hand-l.* iv. p. 31 (1903).

The eggs of the Madagascar Babbler are of a narrow, pointed oval form, and have a considerable amount of gloss. There are two types in the Collection, and the eggs of one differ considerably from those of the other. Those of one type at first sight appear to be of a uniform bright chestnut-colour. When closely examined, however, they will be found to be very closely mottled with chestnut on a somewhat lighter ground of the same. Each of the eggs is marked with a few black lines. The eggs of the second type have a much lighter ground-colour, varying from pinkish cream to pale chestnut, and this is clouded and blotched with deep chestnut or maroon-brown, sparingly in some cases and rather thickly in others. They measure from .88 to .94 in length, and from .62 to .65 in breadth.

Genus **TURDINUS**, *Blyth*.

Turdinus abbotti (*Blyth*).

Turdinus abbotti, *Sharpe, Cat. Birds B. M.* vii. p. 541 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 154 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 103 (1889); *Nehr. Kat. Eiersamml.* p. 63 (1899); *Sharpe, Hand-l.* iv. p. 32 (1903).

The eggs of Abbott's Babbler are of a very broad, blunt oval form, and are highly glossy. The ground is of a pale salmon-pink colour, and this is sparingly marked with roundish spots, scrawls and hieroglyphic-like marks of rich chestnut. About the larger end there are also many spots of a pale purple colour. The eggs measure from .73 to .85 in length, and from .6 to .66 in breadth.

(Plate II. fig. 1.)

Turdinus sepiarius, *Sharpe, Cat. Birds B. M.* vii. p. 544 (1883); *Nehr. Kat. Eiersamml.* p. 63 (1899); *Sharpe, Hand-l.* iv. p. 32 (1903).

An egg of Horsfield's Babbler is of a blunt oval form, and fairly glossy. The ground-colour is salmon-pink, and on this there are some irregular blotches of light reddish brown and also some very

conspicuous and bold hieroglyphic-like scrawls of very dark reddish brown towards the larger end. There are also a few underlying markings of lavender-grey. The measurements are $\cdot 85$ by $\cdot 62$.

1. Lawang, Java, 5th Nov. (*J. White-head*). Crowley Bequest.

***Turdinus macrodactylus* (Strickl.).**

Turdinus macrodactylus, *Hume, Stray Feath.* viii. p. 60 (1879); *Sharpe, Cat. Birds B. M.* vii. p. 548 (1883); *id. Hand-l.* iv. p. 34 (1903).

The eggs of Strickland's Babbler in the Collection are of a blunt oval form, and only moderately glossy. The ground is white, and this is spotted, streaked and smeared with rich maroon and pale pink. Some of the markings resemble scrawls and hieroglyphics. In addition, and at the large end of the egg, there are numerous spots and blotches of dull purple. The eggs bear a close general resemblance to those of *T. abbotti*, but are very much larger. They measure respectively: $\cdot 92$ by $\cdot 7$; $\cdot 96$ by $\cdot 68$.

2. Klang, Malay Peninsula, 12th April (*W. Davison*). Hume Coll.

Genus **DRYMOCHÆRA**, *Finsch.*

Drymochæra badiceps*, *Finsch.

(Plate II. fig. 5.)

Drymochæra badiceps, *Nehr. J. f. O.* 1879, pp. 399, 404; *Sharpe, Cat. Birds B. M.* vii. p. 550 (1883); *Nehr. Kat. Eiersamml.* p. 63 (1899); *Sharpe, Hand-l.* iv. p. 36 (1903).

Two eggs of the Fijian Babbler in the Collection vary considerably in colour as well as size. The smaller of the two is of a very rich dark tint of reddish chocolate, with a still darker but indistinct cap at the larger end, and highly glossy. The larger is of a uniform chocolate-colour without the admixture of red as in the smaller one, and there is a larger and less indistinct zone of a darker shade at the larger end; the surface is only moderately glossy. The respective measurements are $\cdot 71$ by $\cdot 55$ and $\cdot 81$ by $\cdot 59$.

1. Fiji Islands. Crowley Bequest.

Genus **DRYMOCATAPHUS**, *Blyth.*

***Drymocataphus capistratus* (Temm.).**

(Plate II. fig. 3.)

Drymocataphus capistratus, *Sharpe, Cat. Birds B. M.* vii. p. 553 (1883); *Nehr. Kat. Eiersamml.* p. 63 (1899); *Sharpe, Hand-l.* iv. p. 36 (1903).

The eggs of the Javan Black-capped Babbler are of a regular oval shape, and have a small amount of gloss. The colour is pale pink, clouded with a darker shade of pink and very light chestnut. Overlying these there are also hieroglyphic-like scrawls and spots of dark reddish brown irregularly distributed, and a few similar underlying markings of purplish grey. They measure respectively: .85 by .62; .87 by .62; .90 by .65.

1. Java, 24th April. Crowley Bequest.
2. Java, 25th May. Crowley Bequest.

Drymcataphus nigricapitatus (Eyton).

Drymcataphus nigricapitatus, Sharpe, *Cat. Birds B. M.* vii. p. 554 (1883); Oates, *Fauna Brit. Ind., Birds*, i. p. 145 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 102 (1889); Sharpe, *Hand-l.* iv. p. 36 (1903).

The eggs of the Malayan Black-capped Babbler in the Collection are of an elliptical form and exhibit a considerable amount of gloss. The ground, of which very little is visible, is of a creamy-white colour, and this is thickly freckled and mottled with brown and underlying pale purple, the two colours being of about equal extent. They measure respectively: .82 by .61; .81 by .62.

2. Klang, Malay Peninsula, 3rd April Hume Coll.
(W. Davison).

Drymcataphus capistratoides (Strickl.).

(Plate II. fig. 4.)

Drymcataphus capistratoides, Sharpe, *Cat. Birds B. M.* vii. p. 555 (1883); *id. Hand-l.* iv. p. 36 (1903).

Two eggs of the Bornean Black-capped Warbler are of an elliptical form and glossy. The ground-colour is light grey, almost entirely covered with freckles and streaks of brown and pale purple, these forming a more or less distinct cap at one end. They measure respectively: .9 by .64; .86 by .61.

2. Borneo (*Sir Hugh Low*). Dr. Bowdler Sharpe [P.].

Drymcataphus tickelli (Blyth).

Drymcataphus tickelli, Sharpe, *Cat. Birds B. M.* vii. p. 557 (1883); Oates, *Fauna Brit. Ind., Birds*, i. p. 146 (1889); Stuart Baker, *Journ. Bombay Nat. Hist. Soc.* viii. p. 189 (1898); Sharpe, *Hand-l.* iv. p. 37 (1903).

Eggs of Tickell's Babbler in the Collection resemble those of *D. assamensis* in shape and markings, but the ground-colour is greenish grey, instead of pale bluish. They measure from .85 to .87 in length, and from .61 to .64 in breadth.

3. Hungrum, N. Cachar, 14th June. E. C. Stuart Baker, Esq. [C.].

The eggs of the Madagascar Spectacled Babbler are of a regular oval form and exhibit a small amount of gloss. The ground-colour varies from a pinkish white to a pale salmon-pink, and this is densely spotted, blotched and clouded with deep maroon in some cases, deep reddish brown in others. At the larger end, the markings are generally confluent and form a well-defined cap. Some underlying pale purple spots and blotches are also spread over the shell. The eggs measure from .71 to .8 in length, and from .54 to .56 in breadth.

8. Betsileo, Madagascar.

3. Madagascar (*W. Deans Cowan*).

Crowley Bequest.

Genus **NESOBATES**, *Sharpe*.**Nesobates madagascariensis** (*Gmel.*).

(Plate II. fig. 10.)

Oxylabes madagascariensis, *Milne-Edwards & Grandidier, Hist. Nat. Madag., Ois.* i. p. 357 (1879); *Cowan, Proc. R. Phys. Soc. Edin.* vii. p. 148 (1882); *Sharpe, Cat. Birds B. M.* vii. p. 571 (1883).
Nesobates madagascariensis, *Sharpe, Hand-l.* iv. p. 40 (1903).

The eggs of the Madagascar White-throated Babbler are of a regular oval form and devoid of gloss. The ground-colour is very pale pinkish white, and this is very delicately marked all over with very minute specks of reddish brown or chocolate-brown. The eggs measure from .54 to .59 in length, and from .41 to .45 in breadth.

6. Betsileo, Madagascar.

Rev. W. Deans Cowan [C.].

Genus **ANUOPSIS**, *Sharpe*.**Anuopsis malaccensis** (*Hartl.*).

(Plate II. fig. 12.)

Brachypteryx malaccensis, *Hume, Stray Feath.* viii. p. 59 (1879); ix. p. 111 (1880).
Anuopsis malaccensis, *Sharpe, Cat. Birds B. M.* vii. p. 588 (1883); *id. Hand-l.* iv. p. 41 (1903).

Two eggs of Hume's Short-wing in the Collection are of a regular oval form and fairly glossy. They are cream-coloured, freckled, spotted and streaked all over with chestnut and lilac. The markings are denser at the broad end, where they are more or less confluent and form a zone or cap, which in one egg is somewhat indistinct, and in the other darker and well defined. They measure respectively: .84 by .62; .84 by .63.

2. Johore, Malay Peninsula, 8th March Hume Coll.
 (*W. Davison*).

Genus **CRATEROSCELIS**, *Sharpe*.**Crateroscelis murina** (*Sclat.*).

(Plate II. fig. 13.)

Crateroscelis murina, *Sharpe, Cat. Birds B. M.* vii. p. 590 (1883); *id. Hand-l.* iv. p. 41 (1903).

Two eggs of the Mouse-coloured Babbler in the Collection are of a blunt oval form and moderately glossy. One specimen is of a light pinkish-buff colour, spotted and clouded, chiefly in a zone round the broad end, with pale brown and dark lavender. The other specimen is of a precisely similar character, but the ground-colouring

is of a darker reddish-buff tint, and the zone consequently less distinct. They measure respectively: '88 by '66; '87 by '65.

Turdinulus roberti, *Sharpe, Hand-l.* iv. p. 41 (1903).

The eggs of Robert's Babbler are of a broad oval form; the ground-colour is white devoid of gloss, and is either thickly and finely speckled all over with light red and dull lavender undermarkings, or has the markings larger and less numerous. In both forms the markings are most frequent towards the larger end of the shell, round which they sometimes form a distinct though somewhat interrupted zone. They measure '7 to '8 in length, and '55 to '58 in breadth.

| 2. Margherita, Assam, 17th April. | E. C. Stuart Baker, Esq. [C.]. |
|-----------------------------------|--------------------------------|

Genus **RIMATOR**, *Blyth*.**Rimator malacoptilus**, *Blyth*.

(Plate II. fig. 14.)

Rimator malacoptilus, *Sharpe, Cat. Birds B. M.* vii. p. 594 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 175 (1889); *Stuart-Baker, Journ. Bomb. Nat. Hist. Soc.* xiii. p. 404 (1901); *Sharpe, Hand-l.* iv. p. 43 (1903).

The eggs of the Long-billed Babbler are of a regular oval form, and are quite devoid of gloss. The ground is white, and this is sparingly marked with three kinds of markings: roundish spots of an intensely dark reddish brown; small blotches and smears of a pink colour; and specks and spots of underlying pale purple. Round the larger end of the egg, all three kinds of markings are rather thickly clustered together and form a pretty zone; on the other parts of the egg the markings are very spare. Three eggs measure respectively: $\cdot 86$ by $\cdot 6$; $\cdot 84$ by $\cdot 62$; $\cdot 8$ by $\cdot 62$.

3. Sikhim.

J. Gammie, Esq. [P.].

Genus **ALCIPPE**, *Blyth*.**Alcippe nipalensis** (*Hodgs.*).

(Plate IV. figs. 1-4.)

Alcippe nipalensis, *Sharpe, Cat. Birds B. M.* vii. p. 620 (1883); *Nehrke, Kat. Eiersamml.* p. 65 (1899); *Sharpe, Hand-l.* iv. p. 43 (1903). *Alcippe nepalensis*, *Oates, Fauna Brit. Ind., Birds*, i. p. 157 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 104 (1889).

The eggs of the Nepal Babbler differ in form from a broad to a regular oval, and have a considerable amount of gloss. The colouring of the eggs presents much variation, and four types appear to be contained in the Collection. In the *first* the ground is white and this is sparingly marked with a few specks of rich maroon-brown, except at the larger end, where there are some spots, clouds, and lines of the same colour, forming a cap. In the *second*, the ground is pinkish white, more or less heavily blotched towards the larger end with brownish lake interspersed with spots of dark brown, with some smaller and lighter markings of similar colouring irregularly distributed over the rest of the egg. In the *third* type, the ground is pale salmon-pink, and nearly the whole egg is covered with clouds and blotches of reddish chestnut, brighter in tint in some eggs than in others, overlaid with some spots of dark brown. In the *fourth* the ground is also salmon-pink, and the whole egg is rather closely covered with specks and small streaks of pale rufous, which are denser at the larger end of the egg than elsewhere. In all the foregoing types there are always a

number of underlying pale purple markings scattered over the shell, but chiefly at the larger end. The eggs vary from .70 to .80 in length, and from .55 to .61 in breadth.

The eggs of the Nilghiri Babbler are of a broad, blunt oval form and glossy. The colouring is fairly uniform throughout the series. The ground-colour varies from a pale pink to a salmon-pink, and this is blotched and clouded with two shades of purplish carmine. There are, in addition, on almost every egg, a number of spots and hair-lines of a still darker shade, and also large clouds and smears of pale underlying lavender. The markings on a few eggs form a cap at the larger end, but as a rule they are very evenly distributed over the shell. Specimens vary from .73 to .85 in length, and from .57 to .65 in breadth.

Stuart Baker, Journ. Bombay Nat. Hist. Soc. viii. p. 197 (1893) ;
Sharpe, Hand-l. iv. p. 46 (1903).

Eggs of the Red-throated Tit-Babbler in the Collection much resemble those of *S. mandelli*, but are slightly smaller and have rather more gloss, while the blotches and spots are of a somewhat richer brown. They measure from $\cdot 78$ to $\cdot 80$ in length, and from $\cdot 59$ to $\cdot 60$ in breadth.

3. Margherita, Assam, 26th April. E. C. Stuart Baker, Esq. [C.].

Schœniparus dubius (*Hume*).

(Plate II. fig. 17.)

- Minla dubia*, *Sharpe, Cat. Birds B. M.* vii. p. 611 (1883).
Schœniparus dubius, *Oates, Fauna Brit. Ind., Birds*, i. p. 618 (1889) ;
id. ed. Hume, Nests & Eggs Ind. Birds, i. p. 177 (1889) ; *Sharpe, Hand-l.* iv. p. 46 (1903).

The eggs of Hume's Tit-Babbler in the Collection vary from a somewhat narrow to a broad oval form, and they have a fair amount of gloss. The ground is of a very pale cream-colour, and this is marked, first, with clouds and smears of pale yellowish brown, secondly, with dots, lines and small blotches of dark purple-brown, thirdly, with a number of inconspicuous clouds and blotches of very pale lavender, chiefly towards the larger end of the egg. Six eggs measure from $\cdot75$ to $\cdot81$ in length, and from $\cdot54$ to $\cdot6$ in breadth.

Schœniparus mandellii (*Godwin-Austen*).

Minla mandellii, *Sharpe, Cat. Birds B. M.* vii. p. 610 (1883).

Schœniparus mandellii, *Oates, Fauna Brit. Ind., Birds*, i. p. 169 (1889);
Stuart Baker, Journ. Bombay Nat. Hist. Soc. viii. p. 196 (1893);
Sharpe, Hand-l. iv. p. 46 (1903).

The eggs of Mandell's Tit-Babbler are regularly oval, pointed towards one end, and fairly glossy. They are grey, marked with numerous blotches of pale brown, and also show some irregular lines and spots of a darker shade of brown. The measurements of three eggs are respectively: $\cdot8$ by $\cdot6$; $\cdot8$ by $\cdot61$; $\cdot82$ by $\cdot61$.

Genus **PSEUDOMINLA**, *Oates*.

Pseudominla castaneiceps (*Hodgs.*).

(Plate II. fig. 15.)

Minla castaneiceps, *Sharpe, Cat. Birds B. M.* vii. p. 608 (1883).

Sittiparus castaneiceps, *Oates, Fauna Brit. Ind., Birds*, i. p. 172 (1889);
id. ed. Hume, Nests & Eggs Ind. Birds, i. p. 118 (1889).

Pseudominla castaneiceps, *Oates, Ibis*, 1894, p. 480; *Sharpe, Hand-l.* iv. p. 47 (1903).

The eggs of the Chestnut-headed Tit-Babbler are of a pointed oval form, and are almost devoid of gloss. The ground is white. The three eggs procured in Tenasserim are rather thickly marked with extremely minute reddish-brown dots, and round the larger end of each is a very regular, well-defined zone, made up of these dots and of some spots and smears of slate-grey. The egg procured in Sikhim is thickly marked with spots and small blotches of purplish brown and pale purple over the larger end, and with a few small specks elsewhere. These four eggs measure respectively: $\cdot68$ by $\cdot51$; $\cdot7$ by $\cdot52$; $\cdot72$ by $\cdot53$; $\cdot71$ by $\cdot52$.

Genus **STACHYRHIDOPSIS**, *Sharpe*.

Stachyrhidopsis ruficeps (*Blyth*).

Stachyrhidopsis ruficeps, *Sharpe, Cat. Birds B. M.* vii. p. 598; *La Touche, Ibis*, 1899, p. 186; *Nehrke, Kat. Eiersamml.* p. 64 (1899); *Sharpe, Hand-l.* iv. p. 50 (1903).

Stachyrhidopsis ruficeps, *Oates, Fauna Brit. Ind., Birds*, i. p. 164 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 112 (1889).

The eggs of the Red-headed Tit-Babbler are of an oval shape, and they have only a small amount of gloss. The ground is white, and this is sparingly marked with specks and small blotches of pale rusty-red, and underlying pale purple, these being in some cases very faint, causing the eggs to appear pure white. The markings generally form a zone or imperfect cap at the larger end. The eggs measure from '66 to '7 in length, and from '5 to '53 in breadth.

The single egg of the Red-billed Tit-Babbler in the Collection closely resembles some of the eggs of *S. ruficeps*, but the markings are somewhat larger and of clearer and more delicate tints. It measures .62 by .52.

1. Murri, N.W. Himalayas, Hume Coll.
27th June (*C. H. T. Marshall*).

Genus **MIXORNIS**, *Hodys*.

The eggs of the four species of this genus represented in the Collection are of quite the same type, and do not require to be described separately. They are of an oval form, and the majority possess a considerable amount of gloss. The ground is white, and this is speckled and spotted, but not thickly, with shades of rather bright reddish brown and some pale underlying purple. The markings are more thickly clustered at the larger end of the egg and frequently form, at that part, a zone or cap of irregular shape.

Mixornis gularis (*Raffl.*).

Mixornis gularis, *Sharpe, Cat. Birds B. M.* vii. p. 576 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 168 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 116 (1889); *Sharpe, Hand-l.* iv. p. 52 (1903).

The eggs of the Sumatran Yellow-breasted Tit-Babbler measure from .68 to .70 in length, and from .52 to .53 in breadth.

The eggs of the Striped-headed Tit-Babbler are of a narrow oval form, and exhibit a moderate amount of gloss. They are white, spotted and blotched with chestnut and lavender, especially at the

broad end, where the markings are larger and more thickly gathered together. Three examples measure respectively: .8 by .57; .84 by .57; .79 by .58.

3. Mindanao, Philippine Islands, April. Crowley Bequest.

Genus **MYIOPHONEUS**, *Temm.*

The eggs of this genus may be briefly described as of a longish oval form, with little gloss, and of a pale greenish or greyish-white to pinkish ground-colour, more or less freckled and spotted with pinkish and yellowish brown.

Myiophoneus temmincki, *Fig.*

Myiophoneus temmincki, *Sharpe, Cat. Birds B. M.* vii. p. 7 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 178 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 120 (1889); *Nehrke, Kat. Eiersamm.* p. 50 (1899); *Sharpe, Hand-l.* iv. p. 54 (1903).

The eggs of the Himalayan Whistling-Thrush are chiefly of an elongated oval form, and slightly glossy. They are greyish or greenish white, freckled all over with minute specks of pale pink, brownish pink, and lavender-grey. In the majority of specimens these markings are very dense and confluent at the large end, forming an ill-defined cap or zone of darker colour. A few are also marked with some spots of yellowish brown. The eggs measure from 1.22 to 1.52 in length, and from .9 to 1.04 in breadth.

Myiophoneus cæruleus (*Scop.*).

Myiophoneus cæruleus, *Sharpe, Cat. Birds B. M.* vii. p. 9 (1883); *La Touche, Ibis*, 1899, p. 178; *Sharpe, Hand-l.* iv. p. 54 (1903).

Four eggs of the Chinese Whistling-Thrush are not separable from many of the eggs of *M. temmincki*. They are greyish white, freckled all over with very pale brownish pink, which becomes of a slightly darker tint at the broad end. They measure respectively: 1.4 by .1; 1.32 by .98; 1.33 by .98; 1.28 by .95.

4. Kuantun, Fohkien, China, 25th April (*J. D. La Touche*). C. B. Rickett, Esq. [P.].

Myiophoneus horsfieldi, *Vig.*

Myiophoneus horsfieldi, *Sharpe, Cat. Birds B. M.* vii. p. 10 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 180 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 124 (1889); *Nehrke, Kat. Eiersamml.* p. 50 (1899); *Sharpe, Hand-l.* iv. p. 55 (1903).

Eggs of the Malabar Whistling-Thrush are of much the same character as those of *M. temmincki*, but they are on the average more boldly marked. The ground-colour is greyish white or pinkish white, speckled, spotted and blotched with pale brownish pink and underlying lilac, the markings being, as a rule, distributed all over the surface. In size they range from 1.14 to 1.45 in length, and from .93 to .98 in breadth.

Genus **ARRENGA**, *Less.*

Arrenga blighi, *Holdswe.*

(Plate III. fig. 15.)

Myiophoneus blighi, *Legge, Birds Ceylon*, p. 463 (1879); *Sharpe, Cat. Birds B. M.* vii. p. 13 (1883).
Arrenga blighi, *Oates, Fauna Brit. Ind., Birds*, i. p. 183 (1889); *Sharpe, Hand-l.* iv. p. 55 (1903).

The ground-colour in both eggs of the Ceylon Whistling-Thrush

in the Collection is of a pinkish white or cream-colour: one is profusely speckled all over with brownish pink and grey, with a zone of darker tint round the broad end; the other is more sparingly freckled with brownish pink and lilac and has, in addition, a faint but well-defined wreath of lilac round the larger end and a few larger spots, irregularly distributed all over the shell, of reddish brown. These examples measure respectively: 1.16 by .82; 1.18 by .81.

2. Pundaloya, Ceylon, 30th April.

E. W. Antram, Esq. [P.].

Genus **BRACHYPTERYX**, *Horsf.*

Brachypteryx albiventris (*Blanf.*).

Callene albiventris, *Sharpe, Cat. Birds B. M.* vii. p. 15 (1883).

Brachypteryx albiventris, *Oates, Fauna Brit. Ind., Birds*, i. p. 185 (1889);
id. ed. Hume, Nests & Eggs Ind. Birds, i. p. 128 (1889); *Sharpe, Hand-l.* iv. p. 55 (1903).

Until closely examined, the eggs of the White-bellied Short-wing appear to be of a nearly uniform rich olive-brown tint, but the ground-colour is greyish green, so densely mottled and clouded with warm brown that it is hardly distinguishable. The three specimens in the Collection have a slight darkening of the brown colour in the form of a zone at the larger end. They are of a rather long oval form, not very glossy, and measure respectively: .9 by .63; .9 by .63; and .9 by .64.

2. Palni Hills, S. India.

Gould Coll.

1. Palni Hills, April (*S. B. Fairbank*).

Hume Coll.

Brachypteryx rufiventris (*Jerd.*).

Callene rufiventris, *Sharpe, Cat. Birds B. M.* vii. p. 16 (1883); *Nehrke, Kat. Eiersamml.* p. 50 (1899).

Brachypteryx rufiventris, *Oates, Fauna Brit. Ind., Birds*, i. p. 185 (1889);
id. ed. Hume, Nests & Eggs Ind. Birds, i. p. 129 (1889); *Sharpe, Hand-l.* iv. p. 56 (1903).

Of the three eggs of the Rufous-bellied Short-wing in the Collection, two resemble closely those of the preceding species, *B. albiventris*, but the third is much less heavily coated with brown, and shows a good deal of the greyish-green ground; it also has several black hair-lines at the broad end. These eggs are longer in shape than those of the last-mentioned species, measuring respectively: .95 by .61; .97 by .66; and .99 by .63.

2. Nilghiri Hills, S. India, 18th June.

Hume Coll.

1. Coonoor, Nilghiri Hills.

Heteroxenicus carolinæ (*La Touche*).

(Plate III. fig. 7.)

Brachypteryx carolinæ, *La Touche*, *Bull. B. O. C.* viii. p. ix (1898); *id. Ibis*, 1899, pp. 123, 198.

Heteroxenicus carolinæ, *Sharpe*, *Hand-l.* iv. p. 57 (1903).

Four eggs of Caroline's Short-wing are of an elongated oval form, and not at all glossy. In colour they are inseparable from those of *H. nipalensis*, though the rufous mottling on the olive-green ground is, with one exception, not so apparent. They measure respectively: .82 by .60; .81 by .59; .81 by .58; and .80 by .58.

3. Kuatun, Fohkien, China, 25th May C. B. Rickett, Esq. [P.]
(*J. D. La Touche*).

1. Kuatun, 25th May (*J. D. La Touche*). C. B. Rickett, Esq. [P.].

Genus **LAMPROLIA**, *Finsch*.

Lamprolia victoriæ, *Finsch*.

(Plate III. fig. 13.)

Lamprolia victoriæ, *Layard*, *Ibis*, 1876, p. 149; *Sharpe*, *Cat. Birds B. M.* vii. p. 31 (1883); *id. Hand-l.* iv. p. 57 (1903).

A single egg of the Fiji Short-wing in the Collection is of a long oval shape, entirely devoid of gloss, and of a pinkish-white colour, handsomely spotted and mottled, evenly all over, with lilac-red and blurred spots of pale purple. It measures .99 by .65.

1. Fiji Islands. W. A. Bailward, Esq. [P.].

Genus **SIBIA**, *Hodgs*.

Sibia picoides, *Hodgs*.

(Plate I. fig. 4.)

Sibia picoides, *Sharpe*, *Cat. Birds B. M.* vii. p. 401 (1883).

Sibia picoides, *Oates*, *Fauna Brit. Ind.*; *Birds*, i. p. 195 (1889); *id. ed. Hume*, *Nests & Eggs Ind. Birds*, i. p. 132 (1889); *Sharpe*, *Hand-l.* iv. p. 58 (1903).

The eggs of the Long-tailed *Sibia* bear a strong resemblance to those of some of the Shrikes. They are of a broad oval form and have very little gloss. The ground is of a pale greyish white, and this is spotted and speckled with pale yellowish brown and dull purple. The markings are more numerous at the larger end of the egg, where they form a broad, irregular zone. Three eggs measure respectively: .9 by .71; .9 by .7; .9 by .72.

4. Darjiling, 17th June (*J. Gammit*). Hume Coll.

Genus **LIOPTILA**, *Blyth*.**Lioptila capistrata** (*Vig.*).

(Plate I. fig. 5.)

- Malacias capistrata*, *Sharpe, Cat. Birds B. M.* vii. p. 403 (1883); *Nehrke, Kat. Eiersamml.* p. 59 (1889).
Lioptila capistrata, *Oates, Fauna Brit. Ind., Birds*, i. p. 196 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 133 (1889); *Sharpe, Hand-l.* iv. p. 59 (1903).

The eggs of the Black-headed Sibia are of a blunt oval form, and exhibit a little gloss. The ground-colour is of a pale greenish white, and this is marked in a complicated manner: "first there are usually a few, large, irregular, moderately dark brownish-red spots and splashes; then there are a very few, very dark, reddish-brown hair-lines, such as one finds on Buntings' eggs; then there is a good deal of clouding and smudging here and there of pale, dingy purplish or brownish-red (all these markings are most numerous towards the large end); and then, besides these, and almost entirely confined to the large end, are a few pale purple specks and spots. Sometimes the markings are almost wholly confined to the thicker end of the egg." (*Hume*.) Six eggs measure from .92 to 1 in length, and from .66 to .72 in breadth.

Lioptila melanoleuca (*Blyth*).

- Malacias melanoleuca*, *Sharpe, Cat. Birds B. M.* vii. p. 405 (1883).
Lioptila melanoleuca, *Oates, Fauna Brit. Ind., Birds*, i. p. 198 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 135 (1889); *Sharpe, Hand-l.* iv. p. 59 (1903).

The eggs of Tickell's Sibia in the Collection are of a somewhat pointed oval form: they have but little gloss, and are of a pale spotless blue colour. They measure respectively: .92 by .65; .91 by .65.

2. Mt. Mooleyit, Tenasserim, 21st Feb. Hume Coll.
(*W. Davison*).

Genus **ACTINODURA**, *Gould*.

Actinodura egertoni, *Gould*.

(Plate I. fig. 12.)

Actinodura egertoni, *Sharpe, Cat. Birds B. M.* vii. p. 463 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 201 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 136 (1889); *Nehrke, Kat. Eiersamml.* p. 61 (1899); *Sharpe, Hand-l.* iv. p. 60 (1903).

The eggs of the Rufous Bar-wing are of a regular oval form and exhibit a considerable amount of gloss. The ground-colour is bluish green, and this is spotted, smudged and marked with maroon-brown. Many of the markings take the form of hieroglyphic-like figures; others that of small blotches. There are in addition some small markings of pale purple scattered over the shell. They measure from .85 to .97 in length, and from .65 to .67 in breadth.

Genus **STAPHIDIA**, *Swinh.*

Staphidia torqueola, *Swinh.*

Staphidia torqueola, *Sharpe, Cat. Birds B. M.* vii. p. 615 (1883); *La Touche, Ibis*, 1899, p. 406; *Sharpe, Hand-l.* iv. p. 61 (1903).

The eggs of the Collared Staphidia are for the most part of a broad oval form, some being narrower and of a more regular shape. They are white, speckled, dotted, and sometimes blotched, with purplish brown and lavender. The markings are larger and more frequent at the broad end of the egg, where they often form an irregular zone. The eggs are slightly glossy, and measure from .63 to .75 in length, and from .52 to .6 in breadth.

Staphidia everetti, Sharpe.

Staphidia everetti, Sharpe, *Ibis*, 1887, p. 447, 1893, p. 563; *Everett, List Birds Borneo*, p. 107 (1889); *Nehr. Kat. Eiersamml.* p. 64 (1899); *Sharpe, Hand-l.* iv. p. 61 (1903).

One of the two eggs of *Staphidia everetti* in the Collection is of an elliptical, the other of a blunt oval form. On a ground-colour of creamy white they are marked with dots and blotches of various shades of reddish brown, which increase in size and are richer in colour towards the larger end, where they form a more or less distinct zone. They measure respectively .72 by .54 and .72 by .55.

2. Matang, N.W. Borneo, Feb. A. H. Everett, Esq. [P.].

Staphidia castaneiceps (Moore).

(Plate III. fig. 5.)

Ixulus castaneiceps, Moore, *P. Z. S.* 1854, p. 141; *Horsf. & Moore, B. E. I. Co. Mus.* i. p. 411 (1854).

Staphidia castaneiceps, *Godw.-Austen, J. A. S. Beng.* xlvii. pt. ii. p. 20 (1878); *Sharpe, Cat. Birds B. M.* vii. p. 616 (1883); *id. Hand-l.* iv. p. 61 (1903).

Three eggs of the Chestnut-headed *Staphidia* are broad ovals, and very similar in colour to those of *S. everetti*. They measure .7 to .71 in length, and .55 in breadth.

3. Laisung, N. Cachar, 7th May. E. C. Stuart Baker, Esq. [C.].

Genus *SIVA*, Hodgs.

Siva cyanuroptera, Hodgs.

(Plate IV. fig. 12.)

Siva cyanuroptera, Sharpe, *Cat. Birds B. M.* vii. p. 640 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 209 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 138 (1889); *Nehr. Kat. Eiersamml.* p. 65 (1899); *Sharpe, Hand-l.* iv. p. 62 (1903).

The two eggs of the Blue-winged *Siva* in the Collection are of a somewhat elongated oval form, of a blue ground-colour, and fairly glossy. One of them is very sparingly speckled with pale red and

very dark brown, the markings being more numerous at the larger end: the other has at the larger end an incomplete and irregular zone of purple-red blotches and spots, the remainder of the egg being quite plain. They measure respectively $\cdot 75$ by $\cdot 52$ and $\cdot 76$ by $\cdot 52$.

2. Sikhim (*L. Mandelli*).

Hume Coll.

Genus YUHINA, *Hodgys*.

Yuhina nigrimentum, *Hodgys*.

(Plate IV. fig. 9.)

Yuhina nigrimentum, *Sharpe, Cat. Birds B. M.* vii. p. 633 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 212 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 139 (1889); *Baker, Ibis*, 1895, p. 220; *Sharpe, Hand-l.* iv. p. 63 (1903).

The two eggs of the Black-chinned Yuhina taken by Mr. Stuart Baker are of a broad oval form, and have a slight gloss. They are of a very pale green colour, finely speckled and streaked with yellowish brown. These markings are very dense round the broad end, and form a wide zone. Intermingled with them are a few spots of underlying pale lavender. They measure respectively: $\cdot 56$ by $\cdot 45$; $\cdot 58$ by $\cdot 47$.

2. North Cachar Hills, 30th July.

E. C. Stuart Baker, Esq. [P.].

Yuhina pallida, *La Touche*.

(Plate IV. fig. 5.)

Yuhina pallida, *La Touche, Ibis*, 1899, p. 417; *Sharpe, Hand-l.* iv. p. 63 (1903).

The eggs of the Pale Yuhina in the Collection vary from an elongated to a blunt oval in form. The ground-colour is very pale green, and this is more or less freckled, spotted and streaked with light reddish brown and lavender. On four of the eggs the markings are much thicker towards the broader end, but on the remaining one they are evenly distributed over the whole surface, almost hiding the ground-colour. They measure from $\cdot 60$ to $\cdot 68$ in length, and from $\cdot 48$ to $\cdot 49$ in breadth.

Genus **IXULUS**, *Hodgs.****Ixulus flavicollis***, *Hodgs.*

(Plate II. fig. 18.)

Ixulus flavicollis, *Sharpe, Cat. Birds B. M.* vii. p. 612 (1883); *Hume, Stray Feath.* xi. p. 251 (1888); *Oates, Fauna Brit. Ind., Birds*, i. p. 218 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 145 (1889); *Nehrke, Kat. Eiersamml.* p. 64 (1899); *Sharpe, Hand-l.* iv. p. 63 (1903).

The eggs of the Yellow-naped *Ixulus* are of a regular oval form with but little gloss. The ground is creamy-white, sometimes pure white. The markings consist of specks, spots, and small blotches of two or more shades of reddish brown, and are rather thickly set over the shell, but they are most dense at the larger end, where they form a zone or cap, distinct and well-defined in some eggs, irregular and blotchy in others. Some underlying pale purple markings are also scattered over the egg. Specimens measure from .75 to .8 in length, and from .54 to .58 in breadth.

Genus **LIOTHRIX**, *Swains.****Liothrix calipygus***, *Hodgs.*

(Plate IV. fig. 13.)

Liothrix lutea, *Sharpe, Cat. Birds B. M.* vii. p. 644 (1883) [part.]; *Oates, Fauna Brit. Ind., Birds*, i. p. 22 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 147 (1889); *Nehrke, Kat. Eiersamml.* p. 65 (1899).
Liothrix calipygus, *Sharpe, Hand-l.* iv. p. 64 (1903).

The eggs of the Red-billed *Liothrix* are of a regular oval, though some specimens are found with a broader or more elongated form: they have a considerable amount of gloss. The ground-colour varies from very pale greenish white to a pale green or greenish blue, and this is spotted, blotched and clouded with yellowish brown, rufous, purple-brown, and lavender. The markings are nowhere thickly disposed except at the large end, where they form a cap or zone. The eggs measure from .76 to .95 in length, and from .59 to .66 in breadth.

Genus **PTERYTHIUS**, Swains.

***Pterythius æralatus* (Tickell).**

(Plate III. fig. 3.)

Ptererythrius æralatus, Gadow, *Cat. Birds B. M.* viii. p. 114 (1883).
Pteruthius æralatus, Oates, *Fauna Brit. Ind., Birds*, i. p. 225 (1889).
Ptererythius ærilatus, *La Touche*, *Ibis*, 1899, p. 408.
Pterythius æralatus, Sharpe, *Hand-l.* iv. p. 65 (1903).

An egg of Tickell's Shrike-Tit in the Collection is very similar to that of *P. erythropterus*, described below, but the markings at the broad end are more delicate, and instead of forming a cap, are disposed in the shape of a very wide and straggling zone. It measures .9 by .66.

- | | |
|---|---------------------------|
| 1. Kuatun, Fohkien, China, 25th April (<i>J. D. La Touche</i>). | C. B. Rickett, Esq. [P.]. |
|---|---------------------------|

***Pterythius erythropterus* (Fig.).**

(Plate III. fig. 2.)

Ptererythrius erythropterus, Gadow, *Cat. Birds B. M.* viii. p. 113 (1883).
Pteruthius erythropterus, Oates, *Fauna Brit. Ind., Birds*, i. p. 224 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 150 (1889).
Pterythius erythropterus, Sharpe, *Hand-l.* iv. p. 65 (1903).

An egg of the Red-winged Shrike-Tit in the Collection is of a pointed oval form and moderately glossy. It is pinkish white, thickly speckled and spotted with chestnut-brown and underlying

lilac-grey. At the broad end, the markings coalesce and form a small cap. It measures .89 by .69.

1. Murri, N.W. Himalayas, 10th June Hume Coll.
(C. R. Cock).

Genus **MYZORNIS**, *Hodgs.*

Myzornis pyrrhura, *Hodgs.*

Myzornis pyrrhura, *Sharpe, Cat. Birds B. M.* vii. p. 635 (1883); *Oates Fauna Brit. Ind., Birds*, i. p. 233 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 155 (1889); *Sharpe, Hand-l.* iv. p. 66 (1903).

Mr. Hume has expressed doubts regarding the authenticity of the sole egg in the Collection which is attributed to this species, and it must be accepted with reserve.

It is of an oval shape, devoid of gloss, and somewhat discoloured, but it appears to have been pure white. It measures .68 by .5.

1. Native Sikhim, 10,000 feet, May. Hume Coll.

Genus **MESIA**, *Hodgs.*

Mesia argentaureis, *Hodgs.*

(Plate IV. fig. 10.)

Mesia argentaureis, *Sharpe, Cat. Birds B. M.* vii. p. 642 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 244 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 160 (1889); *Nehr. Kat. Eiersamml.* p. 65 (1899); *Sharpe, Hand-l.* iv. p. 66 (1903).

The eggs of the Silver-eared *Mesia* are in no way distinguishable from those of *Liothrix calipygus*, and require no separate description. Five eggs measure from .80 to .88 in length, and from .6 to .63 in breadth.

Suthora bulomachus, *Swinh.*

(Plate I. fig. 13.)

Suthora bulomachus, *David & Oustalet, Ois. Chine*, p. 208 (1877); *Sharpe, Cat. Birds B. M.* vii. p. 490 (1883); *La Touche, Ibis*, 1898, p. 361; *Sharpe, Hand-l.* iv. p. 70 (1903).

The eggs of the Formosan *Suthora* are ordinarily of a regular oval form, but a few are elliptical or even biconical. They possess a fair amount of gloss, and are of a spotless blue colour. They measure from '65 to '68 in length, and from '49 to '53 in breadth.

Genus **SCÆORHYNCHUS**, *Oates*.

Scæorhynchus gularis (*Gray*).

(Plate I. fig. 15.)

Suthora gularis, *Sharpe, Cat. Birds B. M.* vii. p. 492 (1883); *Nehrke, Kat. Eiersamm.* p. 62 (1899).

Scæorhynchus gularis, *Oates, Fauna Brit. Ind., Birds*, i. p. 69 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 44 (1889); *Sharpe, Hand-l.* iv. p. 71 (1903).

Paradoxornis gularis, *La Touche, Ibis*, 1899, p. 188.

The eggs of the Hoary-headed *Suthora* do not differ much from those of *S. ruficeps*. They are of a regular oval form and possess little gloss. They have a creamy-white ground-colour,

with under-markings of pale lavender, spotted and blotched irregularly, but sparingly, with pale and dark brown, the dark brown markings varying a good deal in size and shape. One egg is somewhat thickly covered with pale brown, but has hardly any of the darker colour. They measure from .80 to .84 in length, and from .60 to .66 in breadth.

Family TROGLODYTIDÆ.

Genus *HELEODYTES*, *Cab.*

Heleodytes variegatus (*Gm.*).

Campylorhynchus variegatus, *Sharpe, Cat. Birds B. M.* vi. p. 188 (1881).
Heleodytes variegatus, *Sharpe, Hand-l.* iv. p. 73 (1903).

An egg in the Collection said to be that of the Brazilian Cactus-Wren is of a regular oval form, slightly blunted, and almost devoid of gloss. It is cream-coloured, speckled with pale lilac-red, the markings being dense on the broad end and forming a zone round that part. It measures 1.03 by .71.

- | | |
|--------------|------------------|
| 1. [Brazil.] | Crowley Bequest. |
|--------------|------------------|

Heleodytes capistratus (*Less.*).

Campylorhynchus rufinucha, *Salv. Ibis*, 1866, p. 191.

Campylorhynchus capistratus, *Taylor, Ibis*, 1860, p. 317; *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 64 (1880); *Sharpe, Cat. Birds B. M.* vi. p. 191 (1881).

Heleodytes capistratus, *Sharpe, Hand-l.* iv. p. 73 (1903).

The two eggs of the Chestnut-backed Cactus-Wren in the Collection are of a regular oval form and exhibit very little gloss. They are of a creamy-white colour, spotted and mottled all over with olive-brown and lavender, the markings forming an indistinct cap at the broad end. One of them measures .83 by .62; the other is unfortunately too much damaged to be accurately measured.

2. Chuacus, Guatemala (*O. Salvin & F. D. Godman*). Salvin-Godman Coll.

Heleodytes couesi (Sharpe).

(Plate V. fig. 1.)

Campylorhynchus brunneicapillus, *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 132 (1874); *Coues, Birds Colorado Vall.* p. 156 (1878); *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 67 (1880).

Campylorhynchus couesi, *Sharpe, Cat. Birds B. M.* vi. p. 196 (1881); *Nehrke. Kat. Eiersamml.* p. 45 (1899).

Heleodytes couesi, *Sharpe, Hand-l.* iv. p. 74 (1903).

The two eggs of Coues's Cactus-Wren in the Collection are of a regular oval shape and slightly glossy. They are of a pinkish-white colour, densely speckled and mottled all over with brownish pink, the markings forming an ill-defined zone round the broad end. Two examples measure respectively : .9 by .65; .86 by .63.

2. Tucson, Arizona (*Henshaw Coll.*). Salvin-Godman Coll.

Heleodytes affinis (Xantus).

Campylorhynchus affinis, *Xantus, Proc. Acad. Philad.* 1859, p. 298; *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 133 (1874).

Campylorhynchus brunneicapillus, *Sharpe, Cat. Birds B. M.* vi. p. 197 (1881) [part.].

Heleodytes affinis, *Sharpe, Hand-l.* iv. p. 75 (1903).

The eggs of Xantus's Cactus-Wren vary from a narrow to a broad oval shape and are more or less glossy. They are of a creamy-white ground-colour, in some cases densely mottled, the ground-colour being completely hidden, in others speckled and spotted, and in others again speckled and blotched, with brownish pink and lilac. The markings are of a somewhat darker colour at the broad end, and generally form a zone or cap at that part. Specimens measure from .9 to 1.1 in length, and from .65 to .72 in breadth.

3. San Diego Co., California, 4th April. Crowley Bequest.
7. San Diego Co., California, 5th April. W. Radcliffe Saunders, Esq. [P.].
4. San Antonio, California, 2nd May. E. Lacy, Esq. [P.].
2. Cape St. Lucas, California (*J. Xantus*). Salvin-Godman Coll.

2. Cape St. Lucas, June (*J. X. : Henshaw Coll.*). Salvin-Godman Coll.
2. Cape St. Lucas (*Smiths. Inst.*). Salvin-Godman Coll.
2. Cape St. Lucas (*J. X. : Smiths. Inst.*). Crowley Bequest.

Genus **THRYOPHILUS**, Baird.

Thryophilus longirostris (*Vieill.*).

Thryophilus longirostris, *Sharpe, Cat. Birds B. M.* vi. p. 206 (1881); *Nehr. Kat. Eiersamml.* p. 45 (1899); *von Ihering, Rev. Mus. Paulista*, iv. p. 199 (1900); *Sharpe, Hand-l.* iv. p. 77 (1903).

The eggs of the Long-billed Wren in the Collection are of a somewhat narrow oval shape and devoid of all gloss. They are of a creamy-white colour, somewhat thickly speckled with pale reddish brown and lavender, especially at the broad end, where the markings form a very well-marked zone. Two examples measure respectively: .88 by .6; .82 by .6.

2. Iguapé, Brazil, 12th Nov. Crowley Bequest.

Thryophilus modestus (*Cab.*).

Thryophilus modestus, *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 83 (1880); *Sharpe, Cat. Birds B. M.* vi. p. 209 (1881); *Nehr. Kat. Eiersamml.* p. 46 (1899); *Sharpe, Hand-l.* iv. p. 78 (1903).

The eggs of the Central-American Wren in the Collection are of a narrow oval form, devoid of gloss, and plain white. They measure respectively: .84 by .57; .83 by .56.

2. Costa Rica, 16th May (*C. F. Underwood*). Crowley Bequest.

Thryophilus nigricapillus (*Scl.*).

(Plate V. fig. 4.)

Thryothorus nigricapillus, *Scl. P. Z. S.* 1860, p. 84.

Thryophilus nigricapillus, *Scl. & Salv. P. Z. S.* 1879, p. 493; *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 89 (1880); *Sharpe, Cat. Birds B. M.* vi. p. 217 (1881); *id. Hand-l.* iv. p. 80 (1903).

Eggs of the Black-capped Wren in the Collection are of an abnormally lengthened oval shape, devoid of gloss, and of a creamy-white colour, sparingly spotted with black and lavender, the spots being irregularly distributed over the whole surface. They measure 1.01 by .60 and 1.01 by .62.

2. Nanegal, Ecuador (*L. Fraser*). Salvin-Godman Coll.

Genus **THRYOTHORUS**, Vieill.

Though the eggs of this genus vary slightly in size, and more so in the amount and intensity of the surface-markings, they bear a strong resemblance one to the other. The ground-colour is of a dull or creamy white, either thinly dotted or densely mottled with shades of pinky brown, sometimes evenly distributed, more often collected towards the larger end, and occasionally forming a well-defined zone or cap.

Thryothorus ludovicianus (Lath.).

Thryothorus ludovicianus, var. *ludovicianus*, Baird, Brewer & Ridgw. *N. Amer. Birds*, ii. p. 142 (1874).

Thryothorus ludovicianus, Sharpe, *Cat. Birds B. M.* vi. p. 221 (1881); *Nehr. Kat. Eiersamml.* p. 46 (1899); *Sharpe, Hand-l.* iv. p. 80 (1903).

The eggs of the Great Carolina Wren are of a broad oval shape, and are dull or rather glossy. On a creamy-white ground they are spotted and blotched with pale chestnut, dark reddish brown, and lilac, and there is a well-marked and rather handsome zone at the larger end. They measure from .72 to .78 by from .56 to .59.

1. North America (*Henshaw Coll.*).

Salvin-Godman Coll.

2. New Jersey, 15th May.

W. Radcliffe Saunders, Esq.
[P.].

Thryothorus berlandieri, Baird.

Thryothorus ludovicianus, var. *berlandieri*, Baird, Brewer & Ridgw. *N. Amer. Birds*, i. pp. 141, 144 (1874).

Thryothorus berlandieri, Sharpe, *Cat. Birds B. M.* vi. p. 222 (1881); *id. Hand-l.* iv. p. 80 (1903).

The three eggs of Berlandier's Wren have the markings distributed evenly over the whole surface, and most nearly resemble eggs of *T. grenadensis*. They measure .72 to .73 in length, and .55 in breadth.

3. Texas (*D. G. Elliot: Tristram Coll.*). Crowley Bequest.

Thryothorus miamensis, Ridgw.

Thryothorus ludovicianus, var. *miamensis*, Ridgw. *Amer. Nat.* ix. p. 469 (1875).

Thryothorus miamensis, Sharpe, *Cat. Birds B. M.* vi. p. 222 (1881); *Nehr. Kat. Eiersamml.* p. 46 (1899); *Sharpe, Hand-l.* iv. p. 81 (1903).

The single egg of Maynard's Wren in the Collection is of a blunt oval shape, creamy white, rather thickly covered with speckles and small blotches of pale reddish brown and lavender-grey, which are perceptibly thicker round the crown. It measures .74 by .59.

1. Tampa, Florida, 2nd May.

W. Radcliffe Saunders, Esq.
[P.].

Thryothorus grenadensis, Lawr.

(Plate V. fig. 2.)

Thryothorus grenadensis, *Sharpe, Cat. Birds B. M.* vi. p. 228 (1881); *Nehrk. Kat. Eiersamml.* p. 46 (1899); *Sharpe, Hand-l.* iv. p. 81 (1903).

The eggs of Ober's Rufous Wren are of a broad oval shape and rather dull surface. They have a pinkish-white ground-colour, thickly spotted and blotched with brownish chestnut, lilac-red, and lavender. The markings are pretty evenly distributed over the shell; the two clutches are remarkably constant in character. Specimens measure from .7 to .73 in length, and from .55 to .59 in breadth.

Thryothorus genibarbis, Swains.

Thryothorus genibarbis, *Sharpe, Cat. Birds B. M.* vi. p. 233 (1881); *Nehrk. Kat. Eiersamml.* p. 46 (1899); *Sharpe, Hand-l.* iv. p. 82 (1903).
Troglodytes genibarbis, *von Ihering, Rev. Mus. Paulista*, iv. p. 200 (1900).

An egg of Swainson's Moustached Wren is of a slightly blunted oval form, and of a pinkish-white colour, speckled with pale chestnut and lilac, the markings being more dense round the broad end and forming a zone. The specimen measures .79 by .57.

- | | |
|--|------------------|
| 1. Amazonia (<i>Nehrkorn Coll.</i>). | Crowley Bequest. |
|--|------------------|

Thryothorus rutilus, Vieill.

Thryothorus rutilus, *Sharpe, Cat. Birds B. M.* vi. p. 238 (1881); *Nehrk. Kat. Eiersamml.* p. 47 (1899); *von Ihering, Rev. Mus. Paulista*, iv. p. 200 (1900); *Sharpe, Hand-l.* iv. p. 84 (1903).

The eggs of the White-bellied Orange-breasted Wren in the Collection are of a regular oval shape and very slightly glossy. They are pinkish white, somewhat densely mottled all over with brownish pink, lilac-red, and lavender, the spots thickening sufficiently towards the larger end to form themselves into a zone or crown. They measure respectively .75 by .55 and .76 by .54.

| 1. Venezuela. | Crowley Bequest. |
| 1. Venezuela (<i>Nehrkorn Coll.</i>). | Crowley Bequest. |

Genus **THRYOMANES**, *Slater*.

The eggs are very similar to those of *Thryothorus*.

Thryomanes bewickii (Aud.).

Thryothorus bewickii, *var. bewickii*, *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 145 (1874).

Thryothorus bewickii, *Dresser, Ibis*, 1865, p. 484; *Sharpe, Cat. Birds B. M.* vi. p. 225 (1881); *Nehrk. Kat. Eiersamml.* p. 146 (1899).

Thryomanes bewickii, *Sharpe, Hand-l.* iv. p. 84 (1903).

The eggs of Bewick's Wren are of a broad oval form, somewhat wanting in gloss. They are white, speckled with chestnut, lilac-red, and lavender, the markings being more dense at the broad end than elsewhere, sometimes forming a distinct zone or cap at that part. Specimens measure from .65 to .75 in length, and from .5 to .53 in breadth.

Thryomanes spilurus (*Vigors*).

Thryothorus bewickii, var. *spilurus*, *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 147 (1874).

Thryothorus spilurus, *Sharpe, Cat. Birds B. M.* vi. p. 225 (1881); *Nehrk. Kat. Eiersamml.* p. 46 (1899).

Thryomanes spilurus, *Sharpe, Hand-l.* iv. p. 84 (1903).

The three eggs of Vigors's Wren in the Collection are of a regular oval form and moderately glossy. They are white, very delicately speckled (in two out of the three in the shape of a zone round the broad end) with brownish pink, lilac-red, and lavender. They measure respectively: .63 by .5; .61 by .5; and .65 by .5.

Genus *CISTOTHORUS*, *Cab.*

Cistothorus palustris (*Wilson*).

Telmatodytes palustris, *Coues, Birds N.-West*, p. 34 (1874).

Cistothorus palustris, *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 161 (1874); *Sauv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 104 (1880); *Sharpe, Cat. Birds B. M.* vi. p. 241 (1881); *Nehrk. Kat. Eiersamml.* p. 47 (1899); *Sharpe, Hand-l.* iv. p. 86 (1903).

The eggs of the Eastern Long-billed Marsh-Wren vary in shape from a regular to a broad oval and are fairly glossy. The ground-colour, where visible, is ashy grey, and this is very densely mottled or streaked with chocolate-brown, some specimens presenting the appearance of being almost uniformly of this colour. In a few cases there is a distinct crown or cap at one end, of a still darker tint. They measure from .57 to .67 in length, and from .49 to .51 in breadth.

Cistothorus stellaris (Naum.).

- Troglodytes stellaris*, Thien. *Fortpflanz. ges. Vög.* tab. xii. fig. 13 (1845-54).
Cistothorus stellaris, Coues, *Birds N.-West*, p. 36 (1874); Baird, *Brewer & Ridgw. N. Amer. Birds*, i. p. 159 (1874); Coues, *Birds Col. Vall.* p. 180 (1878); Sharpe, *Cat. Birds B. M.* vi. p. 243 (1881); *Nehrk. Kat. Eiersamml.* p. 47 (1899); *Sharpe, Hand-l.* iv. p. 87 (1903).

The eggs of the Short-billed Marsh-Wren in the Collection are of a broad oval shape, much pointed at the small end, and slightly glossy. They are plain white, and measure respectively: .57 by .45; .6 by .5; .61 by .5. Thienemann (*l. c.*) figures an egg considerably spotted, but the most reliable American authorities agree in stating that the eggs are white and spotless.

1. North America (*Krider: Smiths. Inst.*). Salvin-Godman Coll.
2. North America (*Nehrkorn Coll.*). Crowley Bequest.

Cistothorus platensis (Lath.).

- Troglodytes platensis*, Thien. *Fortpflanz. ges. Vög.* tab. xii. fig. 15 (1845-54).
Cistothorus platensis, Sharpe, *Cat. Birds B. M.* vi. p. 244 (1881); *Scl. & Huds. Argent. Orn.* i. p. 15 (1888); James, *New List Chilian Birds*, p. 1 (1892); *Nehrk. Kat. Eiersamml.* p. 47 (1899); *Sharpe, Hand-l.* iv. p. 87 (1903).

In describing the eggs of this species, the La Plata Marsh-Wren, we have only at the present date (1902) the figure given by Thiene-mann (*l. c.*) and the description of Nehr-korn (*l. c.*) to guide us. Both these authorities give the egg as thickly spotted, as in the case of our three eggs from the Crowley Bequest, but we have in addition six eggs from Central Chile, from the Berkeley James Col-lection, which are pure spotless white. With this limited material it appears premature to conclude that there are two distinct types. It remains only to describe the three eggs, which are of a regular oval form, rather glossy, the ground-colour pinkish white, thickly speckled, especially towards the larger end, with bright reddish brown. The measurements of all the eggs in the Collection vary from .61 to .69 by from .48 to .52.

Genus **TROGLODYTES**, *Vieill.*

Troglodytes aëdon, *Vieill.*

Troglodytes aëdon, *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 149 (1874); *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 98 (1880); *Sharpe, Hand-l.* iv. p. 87 (1903).

Troglodytes domesticus, *Sharpe, Cat. Birds B. M.* vi. p. 248 (1881).

The eggs of the American House-Wren are of a broad pointed oval or spheroidal form, glossy and pinkish white, very closely speckled and spotted with reddish brown and lavender. The markings are sometimes so dense that little or nothing of the ground remains visible. Specimens measure from .6 to .66 in length, and from .48 to .52 in breadth.

Troglodytes musculus, Naum.

Troglodytes furvus, *Thien. Fortpflanz. ges. Vög.* tab. xii. fig. 14 (1845-54); *Dalgleish, Proc. R. Phys. Soc. Edinb.* viii. p. 81 (1883-5), x. p. 77 (1888-90); *Scl. & Huds. Argent. Orn.* i. p. 12 (1888); *Holland, Ibis*, 1892, p. 194.

Troglodytes musculus, *Sharpe, Cat. Birds B. M.* vi. p. 255 (1881); *Nehrke, Kat. Eiersamml.* p. 47 (1899); *von Ihering, Rev. Mus. Paulista*, iv. p. 199 (1900); *Sharpe, Hand-l.* iv. p. 88 (1903).

The eggs of the Brazilian House-Wren are of a regular oval form, very glossy, pinkish white, minutely and densely stippled and dotted with red and underlying lavender. Many specimens exhibit a well-defined zone or cap of deeper red at the large end. They measure from .64 to .7 in length, and from .5 to .53 in breadth.

Troglodytes hornensis, *Sharpe*, *Cat. Birds B. M.* vi. p. 257 (1881); *Nehr k. Kat. Eiersamml.* p. 47 (1899); *Sharpe*, *Hand-l.* iv. p. 88 (1903).

The eggs of the Pale House-Wren, though in general resembling those of *T. domesticus*, are subject to more variation. They are pinkish white, marked with red and pale underlying lavender. The markings consist of specks, spots, and tiny blotches, and while in some specimens the ground-colour is almost entirely concealed by them, in others more than half the ground remains visible. The markings frequently form a dark zone or cap at the large end of the egg. Examples measure from .54 to .7 in length, and from .48 to .53 in breadth.

Troglodytes europæus, *Baedecker, Eier Eur. Vög.* tab. 43. fig. 1 (1855-63).
Anorthura vulgaris, *Hewitson, Eggs of Brit. Birds*, i. p. 244, pl. lxii. fig. iii (1856).
Anorthura troglodytes, *Sharpe, Cat. Birds B. M.* vi. p. 269 (1881); *id. Hand-l.* iv. p. 91 (1903).

The eggs of the Common Wren are typically of a regular oval shape, but many are more or less spheroidal. The ground-colour is white, and this is sprinkled with minute specks of reddish brown, sometimes evenly distributed over the entire shell, but more often thicker towards the larger end. In some specimens, however, the markings are larger, and these are often set over the broad end of the egg only; in others the specks are so minute and few in number

that they might easily escape observation, and eggs absolutely spotless are of frequent occurrence. They measure from .60 to .75 in length, and from .45 to .55 in breadth.

Anorthura hirtensis, *Sharpe, Hand-l.* iv. p. 91 (1903).

The eggs of this large race of *A. troglodytes*, known as the St. Kilda Wren, in the Collection, are of a creamy-white colour, spotted and blotched with reddish, chiefly at the larger end, and in a bolder manner than is usual with those of the ordinary species. They are also unmistakably larger, measuring from .70 to .77 by from .52 to .59.

Anorthura hiemalis (*Vieill.*).

- Anorthura troglodytes*, var. *hyemalis*, *Coues, B. N.-West*, p. 33 (1874).
Anorthura troglodytes hyemalis, *Coues, Birds Col. Vall.* p. 176 (1878).
Troglodytes parvulus, var. *hyemalis*, *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 155 (1874).
Anorthura hiemalis, *Sharpe, Cat. Birds B. M.* vi. p. 275 (1881); *Nehrk. Kat. Eiersamml.* p. 48 (1899); *Sharpe, Hand-l.* iv. p. 92 (1903).

The eggs of the Winter Wren in the Collection resemble, as stated by Nehrkorn, those of *Cistothorus platensis*, and are quite unlike our other eggs of the genus *Anorthura*. They are of a regular oval form, thickly speckled on a pinkish-white ground with bright reddish and dull purplish brown, chiefly towards the larger end. They are from .66 to .7 by from .46 to .51.

Genus CATHERPES, Baird.

Catherpes mexicanus (*Swains.*).

Catherpes mexicanus, *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 72 (1880); *Sharpe, Cat. Birds B. M.* vi. p. 281 (1881); *Nehr. Kat. Eiersamml.* p. 48 (1899); *Sharpe, Hand-l.* iv. p. 93 (1903).

An egg of the Mexican White-throated Rock-Wren in the Collection is of a blunt oval shape, and of a glossy white, sparingly speckled with pale rufous and lilac, the minute markings being more numerous at the larger end. It measures .71 by .55.

1. [Mexico.] Crowley Bequest.

Genus HEMIURA, Ridgw.

Hemiura solstitialis (*Sclat.*).

Troglodytes solstitialis, *Scl. & Salv. P. Z. S.* 1879, p. 493; *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 102 (1880); *Sharpe, Cat. Birds B. M.* vi. p. 269 (1881).

Hemiura solstitialis, *Sharpe, Hand-l.* iv. p. 94 (1903).

The eggs of the Rufous-necked House-Wren are broad ovals, finely glossy, white, speckled with pale red and underlying lavender, more densely at the large end of the egg than elsewhere. Two examples measure respectively: .66 by .52; .68 by .53.

2. Sta. Elena, Antioquia, U.S. Colombia *Salvin-Godman Coll.*
(*J. K. Salmon*).
1. Colombia. Crowley Bequest.

Hemiura brunneicollis (*Sclat.*).

Troglodytes brunneicollis, *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 103 (1880); *Sharpe, Cat. Birds B. M.* vi. p. 261 (1881); *Nehr. Kat. Eiersamml.* p. 48 (1899).

Hemiura brunneicollis, *Sharpe, Hand-l. B.* iv. p. 94 (1903).

Two eggs of the Brown-necked House-Wren differ greatly from one another in shape and markings. Both have the ground-colour white. The shorter egg, which is of a blunt oval shape, has the markings light Indian red, with underlying blotches of dull lavender; almost all these markings are confined to the larger end, where they form an irregular cap or mass. In the second egg, which is larger and of a longer oval shape, the markings are browner, more numerous towards the smaller end, and form a wide interrupted zone

round the larger end. They measure respectively: .6 by .47; .68 by .46.

2. Yucatan (*Nehr Korn Coll.*).

Crowley Bequest.

Genus **HENICORHINA**, *Scl. & Salv.*

Henicorhina leucophrys (*Tschudi*).

Henicorhina leucophrys, *Scl. & Salv. P. Z. S.* 1879, p. 493; *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 80 (1880); *Sharpe, Cat. Birds B. M.* vi. p. 288 (1881); *Nehr. Kat. Eiersamml.* p. 48 (1899); *Sharpe, Hand-l.* iv. p. 95 (1903).

The eggs of the Grey-chested Wren in the Collection are of a lengthened oval shape and moderately glossy. One example is of a plain white colour; a second is white, very lightly and minutely speckled with pale rufous. They measure respectively: .8 by .53; .82 by .57.

2. Frontino, Antioquia, U.S. Colombia *Salvin-Godman Coll.*
(*J. K. Salmon*).

Genus **PNOEPYGA**, *Hodgs.*

Pnoepyga albiventris (*Hodgs.*).

Pnoepyga squamata, *Jerd. Birds Ind.* i. p. 488 (1862); *Oates, Fauna Brit. Ind., Birds*, i. p. 342 (1889).

Family MIMIDÆ.

Genus *MIMUS*, Boie.

The eggs of the genus *Mimus* are much alike in their general character. In all of them the ground-colour is of a light tint varying from greenish blue to greenish grey, and the markings, which are most variable in their combinations and tints, even in eggs of the same species, consist of spots, blotches, and clouds of many shades of purplish-brown and russet.

Mimus polyglottus (Linn.).

Turdus polyglottus, *Thien. Fortpflanz. ges. Vög.* tab. xxiv. fig. 12, *a, b* (1845-54).

Mimus polyglottus, *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 49 (1874); *Sharpe, Cat. Birds B. M.* vi. p. 338 (1881); *Nehrk. Kat. Eiersamml.* p. 49 (1899); *Sharpe, Hand-l.* iv. p. 102 (1903).

The eggs of the American Mocking-Thrush are usually of a broad oval form. They vary from greenish to bluish white, and are spotted, blotched, and clouded with various shades of reddish and purple-brown and underlying lavender-grey. The markings are generally densest at the broad end, where they often form an irregular cap. Specimens measure from ·9 to 1·07 in length, and from ·68 to ·8 in breadth.

Mimus triurus (Vieill.).

Mimus triurus, *Hudson, P. Z. S.* 1872, p. 539; *Sharpe, Cat. Birds B. M.* vi. p. 342 (1881); *Scl. & Huds. Argent. Orn.* i. p. 8 (1888); *Holland, Ibis*, 1897, p. 166; *Nehrke, Kat. Eiersamml.* p. 49 (1899); *Sharpe, Hand-l.* iv. p. 103 (1903).

Two eggs of the White-banded Mocking-Thrush in the Collection are of a long narrow oval form and slightly glossy. They are pale green, rather densely speckled with pale reddish brown and underlying lilac-grey. They measure respectively : 1.03 by .71; 1.1 by .74.

- | | | |
|----|--------------------------|---------------------------|
| 2. | Argentine Republic, Nov. | A. H. Holland, Esq. [C.]. |

Mimus longicaudatus (Tschudi).

(Plate IV. fig. 17.)

Mimus longicaudatus, *Sharpe, Cat. Birds B. M.* vi. p. 342 (1881); *Nehrke, Kat. Eiersamml.* p. 49 (1899); *Sharpe, Hand-l.* iv. p. 103 (1903).

The only egg of the Long-tailed Mocking-Thrush in the Collection is almost elliptical in form, and in colour is very pale blue, spotted

and streaked with light reddish brown over the whole surface, but a little more thickly towards one end. It is slightly glossy, and measures 1.1 by .8.

1. Peru (*Nehr Korn Coll.*).

Crowley Bequest.

Mimus thenca (*Molina*).

Turdus thenca, *Thien. Fortpflanz. ges. Vög.* tab. xxiv. fig. 16 (1845-54).

Mimus thenca, *Fraser, P. Z. S.* 1843, p. 111; *Sharpe, Cat. Birds B. M.* vi. p. 345 (1881); *James, New List Chilean Birds*, p. 1 (1892); *Nehr. Kat. Eiersamml.* p. 49 (1899); *Sharpe, Hand-l.* iv. p. 103 (1903).

The eggs of the Chilean Mocking-Thrush vary in shape from a narrow to a broad oval and are moderately glossy. In ground-colour they range from bluish- to greenish-white or grey; but the character of the surface-markings appears to indicate the existence of two types sufficiently distinct but nevertheless connected by intermediate forms. The first type, which is that figured by Thienemann (*l. c.*), is regularly and rather thickly covered with freckles and short streaks of pale reddish brown, somewhat denser at the larger end; while the eggs of the second type closely resemble in their bolder coloration those of *M. polyglottus*.

An intermediate example, from Convento, has the freckles larger and less numerous than in the first type, the ground-colour being quite conspicuous. The eggs measure from 1.07 to 1.18 in length, and from .79 to .91 in breadth.

Mimus modulator (*Gould*).

(Plate IV. fig. 15.)

Mimus modulator, *Sharpe, Cat. Birds B. M.* vi. p. 347 (1881); *Sci. & Huds. Argent. Orn.* i. p. 5 (1889); *Holland, Ibis*, 1892, p. 194; *Aplin, Ibis*, 1894, p. 162; *Nehr. Kat. Eiersamml.* p. 49 (1899); *Sharpe, Hand-l.* iv. p. 103 (1903).

Mimus calandria, *Dalgleish, Proc. R. Phys. Soc. Edin.* viii. p. 81 (1880-1).

The eggs of the Calandria Mocking-Thrush resemble those of *M. polyglottus* in colour, but they are rather larger. The general coloration, moreover, is suffused with a more rosy tint; and the seven specimens from the Crowley Bequest, apparently selected from various sets, are exceedingly handsome and richer, both in ground-

colour and markings, than ordinary eggs of *M. polyglottus*. They measure from 1·03 to 1·1 in length, and from ·75 to ·85 in breadth.

The eggs of the Graceful Mocking-Thrush resemble very closely those of *M. polyglottus*, but one set of three from Grenada differs so much from the ordinary type that it deserves special mention. To begin with, the eggs are all of a very long pointed oval form: each differs strikingly from the others, the first being of a very clear pale blue with only the faintest trace of yellowish-brown spots; the second is densely freckled all over with tiny specks of pale reddish brown, more so even than in the case of the first type of *M. thenca* already described; while the third egg has larger and less numerous spots, allowing more ground-colour to be seen and thereby approaching the ordinary type. The other set from Grenada is a handsome one, the eggs being boldly marked and the colouring of the blotches a rich red-brown. They measure from ·92 to 1·1 in length, and from ·70 to ·79 in breadth.

Genus *OREOSOPTES*, *Baird*.

Oreoscoptes montanus (Townsend).

(Plate IV. fig. 14.)

Oreoscoptes montanus, *Coues, Birds N.-West*, p. 7 (1874); *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 32 (1874); *Coues, Birds Color. Fall.* p. 48 (1878); *Sharpe, Cat. Birds B. M.* vi. p. 333 (1881); *Nehrk. Kat. Eiersamml.* p. 48 (1899); *Sharpe, Hand-l.* iv. p. 106 (1903).

The eggs of the Mountain Mocking-Thrush, or Sage-Thrasher, have a very striking and handsome appearance. They are of a

broad oval form and possess a considerable amount of gloss. The ground-colour is of a deep blue, much speckled and blotched, especially at the larger end of the egg (where the markings are collected into the form of a more or less distinct zone), with chocolate or umber-brown and some underlying markings of lilac-grey. They measure from .92 to 1.01 in length, and from .68 to .71 in breadth.

Genus **TOXOSTOMA**, Wagl.

It is somewhat difficult to give any satisfactory general description of the eggs of *Toxostoma*; but it may be noticed that there are two very distinct and extreme forms—one (*T. rufum*) in which the pale greyish or greyish-blue ground-colour is almost concealed by the fine markings of reddish brown all over the surface; and the other (*T. crissale*) of pure spotless blue of medium intensity. Starting from *T. rufum*, the eggs would seem to run in a descending scale of red markings and an ascending scale of blue ground-colour, through *T. longirostre*, *T. cinereum*, *T. bendirei*, *T. curvirostre*, *T. palmeri*, *T. redivivum*, and *T. lecontei* in the order named, to *T. crissale*, the blue form.

Taken as a whole, the eggs of this genus do not vary much in size; they are only moderately glossy.

Toxostoma rufum (Linn.).

Turdus rufus, Thien. *Fortpflanz. ges. Vög.* tab. xxiv. fig. 21 (1845-54).

Harporhynchus rufus, Coues, *Birds N.-West*, p. 9 (1874); Baird, Brewer & Ridgw. *N. Amer. Birds*, i. p. 37 (1874); Coues, *Birds Colorado Vall.* p. 61 (1878); Sharpe, *Cat. Birds B. M.* vi. p. 353 (1881); Nehrke, *Kat. Eiersamml.* p. 49 (1899).

Toxostoma rufum, Sharpe, *Hand-l.* iv. p. 106 (1903).

The eggs of the Brown Thrasher are of a regular oval form, and are very pale grey or greyish blue, densely marked with minute dots of light reddish brown. In most specimens the markings are very uniformly distributed over the entire shell, but in a few they are denser at the broad end and form an ill-defined cap. Specimens measure from .94 to 1.14 in length, and from .72 to .8 in breadth.

Toxostoma cinereum (Xantus).

Harporhynchus cinereus, Xantus, *Proc. Philad. Acad.* 1859, p. 298; Baird, Brewer & Ridgw. *N. Amer. Birds*, i. p. 40 (1874); Sharpe, *Cat. Birds B. M.* vi. p. 355 (1881); Nehrke, *Kat. Eiersamml.* p. 49 (1899).

Toxostoma cinereum, Sharpe, *Hand-l.* iv. p. 106 (1903).

The eggs of the Cape St. Lucas Thrasher and of the species next in order, the Arizona Thrasher, appear to have more general

resemblance to those of the genus *Mimus* than to those of *Toxostoma*, the surface-markings being fewer and larger, and in some examples fainter than those on the typical eggs of *T. rufum*, though the form and size of the egg and the ground-colour do not show any divergence. They measure from .90 to 1.11 in length, and from .69 to .81 in breadth.

Toxostoma bendirei (Coues).

(Plate IV. fig. 18.)

Harporhynchus bendirei, *Baird, Brewer & Ridgw. N. Amer. Birds*, iii. p. 500 (1874).

Harporhynchus bendirii, *Coues, Birds Color. Vall.* p. 67 (1878); *Sharpe, Cat. Birds B. M.* vi. p. 356 (1881); *Nehrk. Kat. Eiersamml.* p. 49 (1899).

Toxostoma bendirei, *Sharpe, Hand-l.* iv. p. 107 (1903).

The single egg of the Arizona Thrasher in the Collection is of a rather broad blunt oval form; the ground-colour is pale bluish grey; the rather faint surface-markings, which in the form of spots and blotches are gathered together somewhat thickly at the larger end, are of a pale lavender-grey beneath, and of a soft rosy-brown above. It measures 1.04 by .80.

Toxostoma curvirostre (Swains.).

(Plate IV. fig. 19.)

Harporhynchus curvirostris, *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 41 (1874); *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 32 (1879); *Sharpe, Cat. Birds B. M.* vi. p. 358 (1881); *Nehrck. Kat. Eiersamml.* p. 49 (1899).

Toxostoma curvirostre, *Sharpe, Hand-l.* iv. p. 107 (1903).

Eggs of the Grey Curve-billed Thrasher have the general character of those of *T. rufum* and its allies, but differ from them in the much more conspicuous and decided greenish-blue tint of their ground and in the finer and lighter nature of the speckling, which in the form of minute reddish-brown dots is evenly distributed over their whole surface. But there are apparently exceptions to this type, in which there exists a decided zone or cap at the larger end, formed of a brighter and much denser gathering of the spots: a large proportion of the ten eggs of the Crowley Bequest (from Texas) are of this exceptional form, and much handsomer than the ordinary eggs. The average measurements are 1.11 by .78.

Toxostoma crissale (*Henry*).

(Plate IV. fig. 21.)

Harporhynchus crissalis, *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 47 (1874); *Coues, Birds Color. Vall.* p. 73 (1878); *Sharpe, Cat. Birds B. M.* vi. p. 361 (1881); *Nehr. Kat. Eiersamml.* p. 50 (1899).

Toxostoma crissale, *Sharpe, Hand-l.* iv. p. 108 (1903).

The three eggs of the Rufous-vented Thrasher in the Collection are of a uniform spotless greenish-blue colour and rather glossy, resembling in every respect those of the next genus *Melanotis*, and thereby differing from all others of their own genus. They measure respectively: 1·01 by ·81; 1·09 by ·79; and 1·08 by ·80.

- | | |
|--|------------------|
| 1. California (<i>Nehrkorn Coll.</i>). | Crowley Bequest. |
| 2. [California.] | Crowley Bequest. |

* The parent birds and nest, accompanying these eggs, are now mounted in the Bird Gallery of the Natural History Museum.

Genus **MELANOTIS**, Bonap.**Melanotis cærulescens** (Swains.).

Melanotis cærulescens, *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 28 (1879); *Sharpe, Cat. Birds B. M.* vi. p. 362 (1881); *Nehrk. Kat. Eiersamml.* p. 50 (1899); *Sharpe, Hand-l.* iv. p. 108 (1903).

The two eggs of the Slaty-blue Mocking-Thrush in the Collection are glossy and of a regular oval form. They are of a spotless greenish blue, of a decided tint, and measure respectively 1·05 by ·72 and 1·03 by ·71. Nehrkorn describes the eggs as spotted, but all the available information respecting the eggs of the genus seems to indicate that they are spotless.

2. [Mexico.]

Crowley Bequest.

Melanotis hypoleucus, Hartl.

Melanotis hypoleucus, *Scl. & Salv. Ibis*, 1859, p. 7; *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 29 (1879); *Sharpe, Cat. Birds B. M.* vi. p. 363 (1881); *id. Hand-l.* iv. p. 108 (1903).

The two eggs of the White-breasted Blue Mocking-Thrush in the Collection are of a narrow oval form and have a considerable amount of gloss. They are of a plain unspotted bluish-green colour, rather lighter than those of *M. cærulescens*. They are of the same size, measuring 1·20 by ·75.

2. Dueñas, Guatemala, 30th May
(*O. Salvín*).

Salvin-Godman Coll.

Genus **MARGAROPS**, Sclat.**Margarops fuscatus** (Vieill.).

Cichlherminia fuscata, *A. & E. Newton, Ibis*, 1859, p. 141, pl. xii. fig. 8; *Sharpe, Cat. Birds B. M.* vi. p. 329 (1881); *Nehrk. Kat. Eiersamml.* p. 48 (1899).

Margarops fuscatus, *Sharpe, Hand-l.* iv. p. 110 (1903).

The eggs of the White-eyed Mocking-Thrush are somewhat narrow pointed ovals, with a fair amount of gloss and of a plain greenish-blue colour. They measure from 1·17 to 1·35 in length, and from ·8 to ·9 in breadth.

Family TURDIDÆ.

Genus **PLATYCICHLA**, *Baird*.**Platycichla flavipes** (*Vieill.*)

(Plate V. fig. 5.)

Merula flavipes, *Seeborn*, *Cat. Birds B. M.* v. p. 253 (1881); *Sharpe in Seeborn's Mon. Turdidae*, ii. p. 81 (1900); *von Ihering, Rev. Mus. Paulista*, ii. p. 199 (1900).

Platycichla flavipes, *Sharpe, Hand-l.* iv. p. 111 (1903).

The three eggs of the Brazilian Grey Ouzel are of a narrow oval shape and of a dull surface. They are pale greenish blue, rather coarsely blotched and spotted with reddish brown and lilac-grey. In two of the examples the blotches are larger at the broad end than elsewhere. They measure respectively : 1.2 by .8; 1.18 by .8; 1.22 by .8.

3. Rio de Janeiro, Brazil.

Alexander Fry, Esq. [P.].

Platycichla venezuelensis, *Sharpe*.

Merula flavipes, *auct. pt., ex Venezuela*.

Merula carbonaria, *Nehrck. Kat. Eiersamml.* p. 38 (1899).

Merula venezuelensis, *Sharpe in Seeborn's Mon. Turdidae*, ii. p. 83 (1900).

Platycichla venezuelensis, *Sharpe, Hand-l.* iv. p. 111 (1903).

The eggs of the Venezuelan Grey Ouzel are represented in the Collection by four specimens from the Crowley Bequest. They resemble those of *P. flavipes* in colour, but are smaller, rather more glossy, and, in general appearance, brighter. One of the four differs from the others in being very thickly spotted and streaked all over, but little ground-colour being visible. In size they vary from .96 to 1.11 in length, and from .73 to .79 in breadth.

4. Venezuela (*Gugenheimer*).

Crowley Bequest.

Genus **MYIEDESTES**, *Swains*.**Myiodesetes ralloides** (*d'Orb.*).

(Plate VII. fig. 16.)

Myiadesetes ralloides, *Scl. & Salv. P. Z. S.* 1879, p. 492.

Myiadesetes ralloides, *Sharpe, Cat. Birds B. M.* vi. p. 375 (1881); *Nehrck. Kat. Eiersamml.* p. 50 (1899).

Myiadesetes ralloides, *Sharpe, Hand-l.* iv. p. 113 (1903).

The eggs of the Andean Solitaire are of a rather broad, pointed, oval shape, and slightly glossy. The ground is white or pinkish-

white, somewhat thickly speckled and mottled, especially at the broad end, with bright chestnut, brownish lilac, and lavender-grey. Five examples measure from .91 to 1.02 in length, and from .67 to .7 in breadth.

3. Santa Elena, Antioquia, U.S. Salvin-Godman Coll.
Colombia (*T. K. Salmon*).
2. U.S. Colombia. Crowley Bequest.

Genus **COCHOA**, *Hodgs.*

Cochoa viridis, *Hodgs.*

(Plate V. fig. 6.)

Cochoa viridis, *Sharpe, Cat. Birds B. M.* iv. p. 2 (1879); *Oates, Fauna Brit. Ind., Birds*, ii. p. 160 (1890); *id. ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 111 (1890); *Sharpe, Hand-l.* iv. p. 115 (1893).

An egg of the Green Thrush in the Collection is elliptical in shape and very glossy. It resembles many of the eggs of the Common Blackbird (*Merula merula*), being pale greyish green, densely speckled and mottled with reddish brown and pale lavender. It measures 1.03 by .75.

1. Native Sikkim, 10,000 feet, June. Hume Coll.

Genus **MIMOCICHLA**, *Scl.*

Mimocichla rubripes (*Temm.*).

(Plate V. fig. 17.)

Turdus rubripes, *de la Sagra, Cuba, Ois.* p. 46 (1839).

Mimocichla rubripes, *Seebohm, Cat. Birds B. M.* v. p. 283 (1881); *Nelrk. Kat. Eiersamml.* p. 38 (1899); *Sharpe in Seebohm's Mon. Turdidæ*, ii. p. 213 (1902); *id. Hand-l.* iv. p. 115 (1903).

A single egg of the Cuban Grey Thrush in the Collection is rather handsome. It has a cream-coloured ground, and some shell-markings of lavender-grey, the whole surface being thickly streaked and mottled with rich though not very dark chestnut. Size 1.19 by .88.

1. Cuba (*Tristram Coll.*). Crowley Bequest.

Genus **MERULA**, *Leach.*

Merula merula (*Linn.*).

(Plate VIII. figs. 1-4 & 7.)

Turdus merula, *Thien. Fortpflanz. ges. Vög.* tab. xxiv. fig. 20, a-c (1845-54); *Bacdeker, Eier Eur. Vög.* tab. 4. fig. 8, tab. 75. fig. 9 (1855-63); *Hewitson, Eggs of Brit. Birds*, i. p. 91, pl. xxv. figs. i

& ii (1856); *Salvin, Ibis*, 1859, p. 311; *Godman, Ibis*, 1866, p. 95; *Saunders, Ibis*, 1871, p. 209; *Dresser, Birds Eur.* ii. p. 91 (1872).

Merula merula, *Seebohm, Cat. Birds B. M.* v. p. 235 (1881); *id. Brit. Birds*, i. p. 235, pl. 8 (1883); *id. Eggs of Brit. Birds*, p. 181, pl. 50. figs. 11 & 12 (1896); *Sharpe in Seebohm's Mon. Turdidae*, ii. p. 1 (1899); *Nehrk. Kat. Eiersamml.* p. 37 (1899); *Sharpe, Hand-l.* iv. p. 117 (1903).

Eggs of the Blackbird are mostly of an oval form; a few are pyriform, and others are spheroidal. They differ considerably in size and colour. As a rule they exhibit a considerable amount of gloss.

The most common type has the ground-colour bluish green, marked in various ways with pale chestnut or reddish brown and various tints of lilac. In typical specimens the markings are small and very dense and evenly distributed over the whole surface; in others the markings are minute and at the same time rather sparingly scattered over the egg. Others again are marked with spots and streaks of considerable size, and a few with clouds and smears. At the broad end of the egg there are often some black specks and lines. In addition to the above ordinary forms many striking varieties of Blackbird's eggs are met with, and a fair proportion of these is contained in the Museum Collection. Some are unspotted pale blue; some are blue, with a few faint brownish spots; some are plain blue, with a massive cap of rich reddish brown at the broad end, extremely handsome; and others are creamy white, evenly spotted and streaked all over with pale chestnut. It may, perhaps, be worthy of mention that among the large number of clutches in the Collection, there are only two containing the odd light bluish-coloured variety which occurs so much more frequently among the clutches of the Fieldfare.

Specimens measure from 1 to 1·30 in length, and from ·75 to ·93 in breadth.

Merula bouboul (Lath.).

Merula bouboul, *Seebohm*, *Cat. Birds B. M.* v. p. 243 (1881); *Oates, Fauna Brit. Ind., Birds*, ii. p. 130 (1890); *id. ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 93 (1890); *Sharpe in Seebohm's Mon. Turdidae*, ii. p. 19 (1899); *Nehrke. Kat. Eiersamml.* p. 37 (1899); *Sharpe, Hand-l.* iv. p. 118 (1903).

The eggs of the Grey-winged Ouzel in the Collection form a very striking and handsome group. They are of a regular oval form, and slightly glossy. The ground-colour, where visible, is a pale greenish blue, generally profusely streaked, mottled, and clouded with very bright reddish brown. In many specimens the ground is almost entirely concealed by the markings. Some varieties have a massive reddish cap at the broad end; others are less heavily blotched with pale brown and purplish grey; and a remarkably pretty type occurs in which the bright bluish-green ground-colour is but little hidden by the bold grouping of rich brown streaks and spots. The eggs measure from 1.11 to 1.30 in length, and from .80 to .91 in breadth.

Merula albocincta, *Royle*.

Merula albocincta, *Oates, Fauna Brit. Ind., Birds*, ii. p. 127 (1890); *id. ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 92 (1890); *Osmaston, Journ. Bomb. Nat. Hist. Soc.* xi. p. 66 (1897); *Sharpe in Seebohm's Mon. Turdidæ*, ii. p. 23 (1900).

Merula albocincta, *Seebohm, Cat. Birds B. M.* v. p. 245 (1881); *Sharpe, Hand-l.* iv. p. 118 (1903).

The egg of the White-collared Ouzel in the Collection is of a regular oval form and fairly glossy. It is greyish white, spotted and blotched, more densely at the broad end than elsewhere, with brownish red and rich lilac, the markings of the latter colour being rather conspicuous. It measures 1·23 by ·87.

1. Native Sikhim, 27th June. Hume Coll.

Merula serrana (*Tschudi*).

Turdus serranus, *Scl. & Salv. P. Z. S.* 1879, p. 491.

Merula serrana, *Seebohm, Cat. Birds B. M.* v. p. 239 (1881); *Sharpe in Seebohm's Mon. Turdidæ*, ii. p. 41 (1900); *id. Hand-l.* iv. p. 118 (1903).

The egg of the Peruvian Black Ouzel in the Collection is of a creamy-white colour, blotched and streaked with pale chestnut and underlying lavender, more densely about the broad end than elsewhere. It measures 1·17 by ·81. This specimen appears to have faded, for in 1879 Messrs. Sclater and Salvin described the ground-colour as being pale greenish blue.

1. Frontino, Antioquia, U.S. Colombia. Salvin-Godman Coll. (*T. K. Salmon*).

Merula atrisericea (*Lafr.*).

Merula atrosericea, *Seebohm, Cat. Birds B. M.* v. p. 239 (1881); *Nehrk. Kat. Eiersamml.* p. 37 (1899); *Sharpe in Seebohm's Mon. Turdidæ*, ii. p. 43 (1900).

Merula atrisericea, *Sharpe, Hand-l.* iv. p. 118 (1903).

The eggs of the Venezuelan Black Ouzel are of a pointed oval shape and moderately glossy. They are cream-coloured, densely mottled and blotched, especially at the broad end where the markings are confluent, with bright reddish brown or chestnut. Three examples measure respectively: 1·1 by ·76; 1·1 by ·8; 1 by ·71.

3. Venezuela (*Nehrkorn Coll.*). Crowley Bequest.

Merula samoensis, Tristr.

(Plate V. fig. 12.)

Merula vanicorensis, *Finsch & Hartl. Fauna Centr.-Polyn.* p. 97, tab. i. fig. 3 (1867); *Whitmee, Ibis*, 1875, p. 439.

Turdus vanicorensis, *Nehrk. J. f. O.* 1879, p. 405.

Merula samoensis, *Seebohm, Cat. Birds B. M.* v. p. 242 (1881); *Sharpe in Seebohm's Mon. Turdidæ*, ii. p. 51 (1900); *Nehrk. Kat. Eiersamml.* p. 37 (1899); *Sharpe, Hand-l.* iv. p. 118 (1903).

The description of the eggs of the Samoan Black Ouzel, given by Dr. Bowdler Sharpe in Seebohm's 'Monograph of the Turdidæ,' vol. ii. p. 51, is so accurate that it is here utilized:—"Eggs collected by Mr. Whitmee are of two types and vary considerably in size. In one form the ground-colour is light bluish green, thickly spotted and flecked with pale reddish brown, and faint greyish-brown underlying spots. In the other type the ground-colour is of a stone-colour or light blue, against which the pale rufous spots and flecks are more in contrast and show up rather more plainly than in the blue-green type."

This description will be found to include the other eggs in the Collection. In size the eggs vary from 1·10 to 1·31, by from ·76 to ·88.

Merula nigrorum (Ogilvie-Grant).

(Plate V. fig. 18.)

Turdus nigrorum, *Ogilvie-Grant, Ibis*, 1896, p. 544; *id. & Whitehead, Ibis*, 1898, p. 238, pl. v. figs. 8, 9.

Merula nigrorum, *Sharpe in Seebohm's Mon. Turdidæ*, ii. p. 65 (1900); *id. Hand-l.* iv. p. 119 (1903).

Two eggs of the Negros-Island Ouzel in the Collection, taken by Mr. Whitehead in 1896, are of a regular oval form and fairly glossy. They are of a greenish- or bluish-grey colour, thickly mottled and blotched with two shades of rather bright chestnut-red. The markings are evenly distributed over the shell, but are in bolder blotches on one egg than the other. The eggs measure respectively: 1·16 by ·82; 1·17 by ·84.

Merula nigropileus (Laf.).

(Plate V. figs. 9 & 11.)

Merula nigropileus, Seebohm, *Cat. Birds B. M.* v. p. 250 (1881); *Oates, Fauna Brit. Ind., Birds*, ii. p. 126 (1890); *id. ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 91 (1890); *Nehrk. Kat. Eiersamml.* p. 37 (1899); *Sharpe in Seebohm's Mon. Turdidæ*, ii. p. 67 (1900); *id. Hand-l.* iv. p. 119 (1903).

The eggs of the Black-capped Ouzel are of a broad oval form and fairly glossy. They are of a pale greenish-grey or greenish-blue colour, marked with small spots and larger blotches of pale brown, reddish brown or chocolate, and underlying lilac or lavender. The markings generally form more or less of a cap at the broad end, but in two specimens the cap is at the pointed end. The eggs measure from 1·04 to 1·12 in length, and from ·79 to ·85 in breadth.

Merula simillima (Jerd.).

Merula simillima, Seebohm, *Cat. Birds B. M.* v. p. 251 (1881); *Oates, Fauna Brit. Ind., Birds*, ii. p. 124 (1890); *id. ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 88 (1890); *Nehrk. Kat. Eiersamml.* p. 37 (1899); *Sharpe in Seebohm's Mon. Turdidæ*, ii. p. 71 (1900); *id. Hand-l.* iv. p. 119 (1903).

The eggs of the Nilghiri Ouzel in the Collection are all from the Nilghiri Hills, the bulk of them coming with the Hume Collection. Consequently the excellent description of the eggs given in Hume's 'Nests and Eggs of Indian Birds,' 2nd ed. vol. ii. pp. 89, 90, is here-with given *verbatim*:—"The eggs are very similar to many varieties of those of the European Blackbird. In shape they are commonly "a broad oval, pointed towards one end; but, as in the case of our "English favourite, the eggs are sometimes elongated and often "perfectly oval, the smaller end being rounded and obtuse. The "ground-colour varies somewhat, being sometimes of a beautiful "bright blue-green, at others of a dull olive-green, and various "intermediate shades occur.

"They are richly speckled, mottled, and streaked, and at times "even boldly blotched, with brighter and duller, deeper and lighter "shades of brownish red, not unfrequently underlaid by faint spots "and clouds of purplish pink or grey. The markings vary a good "deal in extent and frequency, but, in perhaps a majority of the "eggs, form a more or less conspicuous and confluent cap at the large

"end. In some eggs all the markings are very fine and minute, laid on, as it were, with a very fine-pointed brush; in others they are coarse and streaky, and occasionally bold, blotchy, and well defined.

"Specimens occur which could scarcely be separated from varieties of the English Ring-Ouzel's egg. The eggs have usually a slight gloss, and some specimens are highly glossy. As already mentioned, in some examples secondary markings, small purple clouds and spots, appear to underlie the red-brown blotches."

In size the eggs range from 1.02 to 1.30 in length, and from .78 to .93 in breadth.

Merula bourdilloni, Seebohm.

Merula bourdilloni, Seebohm, *Cat. Birds B. M.* v. p. 251 (1881); *Oates, Fauna Brit. Ind., Birds*, ii. p. 125 (1890); *id. ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 91 (1890); *Sharpe in Seebohm's Mon. Turdidae*, ii. p. 75 (1900); *id. Hand-l.* iv. p. 119 (1903).

The egg of Bourdillon's Ouzel in the Collection, which is one of those taken by Major Terry and mentioned in Hume's 'Nests and

Eggs of Indian Birds,' 2nd ed. vol. ii. p. 91, is of a regular oval shape and possesses a considerable amount of gloss. It is of a pale greenish-blue colour, mottled and speckled all over with dull rufous brown and underlying lilac. It measures 1·07 by ·81, and is undistinguishable from small eggs of *M. similima*.

1. Palani Hills, Southern India, Major Horace A. Terry [P.].
3rd June.

Merula kinnisi, Blyth.

Turdus kinnisi, Legge, *Birds Ceylon*, p. 449 (1879).

Merula kinnisi, Seebohm, *Cat. Birds B. M.* v. p. 252 (1881); Oates, *Fauna Brit. Ind.*, *Birds*, ii. p. 124 (1890); *id. ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 90 (1890); Sharpe in Seebohm's *Mon. Turdidae*, ii. p. 77 (1900); *id. Hand-l.* iv. p. 119 (1903).

Two eggs of the Ceylon Ouzel in the Collection are somewhat unlike both in size and in the character of the markings. The ground-colour of both is a pale bluish green: the smaller egg, which measures 1·15 by ·86, is boldly blotched, especially at the larger end, with rich rufous brown, with a very few smaller spots of the same colour here and there; the larger specimen measures 1·25 by ·89, and is more closely covered with smaller spots of a rather darker tint, forming at the larger end a thickish cap.

Merula ludovicicæ, Lort Phillips.

(Plate V. fig. 7.)

Merula ludovicicæ, Lort Phillips, *Bull. B. O. C.* iv. p. xxxvi (1895); *id. Ibis*, 1895, p. 383; *id. Ibis*, 1896, p. 78; Sharpe in Seebohm's *Mon. Turdidae*, ii. p. 79 (1900); *id. Hand-l.* iv. p. 119 (1903).

As the two eggs of the Somali-land Ouzel in the Collection were taken by Mr. Lort Phillips in Somaliland, and described by him in the 'Ibis' for 1896, we cannot do better than quote from his account of the birds and their nest as follows:—"The eggs were "two in number, of a very delicate type for a Blackbird. The "ground-colour is a very pale greenish blue, plentifully sprinkled "with tiny spots of rufous, clouding together at the larger end; "the underlying markings and spots are faint purplish grey. Axis "1·10 in., diam. ·75 in."

There is not much variety among the eggs of the Norfolk-Island Ouzel in the Collection. They are of a creamy white, in some instances tinged with pink, somewhat sparingly mottled, blotched and spotted over the whole surface with pale rufous and lavender. In form they are regular, or slightly elongated, ovals. They measure from 1.07 to 1.21 by from .80 to .85.

Merula celænops, Stejneger.

Turdus celænops, Stejn. *Proc. U.S. Nat. Mus.* 1887, p. 484.

Merula celænops, Seebohm, *Birds Japan. Emp.* p. 50 (1890); Sharpe in Seebohm's *Mon. Turdidae*, ii. p. 165 (1902); *id. Hand-l.* iv. p. 121 (1903).

Of the eight eggs of the Seven-Islands Ouzel in the Collection, one pair are strikingly different in ground-tint from the rest. The majority are cream-coloured, but these two are bright greenish blue, having a few lilac under-markings towards the larger end, and being somewhat sparingly but boldly and handsomely blotched with brownish red, chiefly in the form of an irregular cap.

The cream-coloured eggs are for the most part more thickly, though quite as boldly, blotched with a brighter chestnut-red, the markings being, if anything, a trifle larger and more numerous at the broad end; but one pair, from the Radcliffe-Saunders Collection, have smaller markings and a more freckled appearance than the others. The variations in size are from 1.15 to 1.21 in length, and from .79 to .90 in breadth.

***Merula erythropleura*, Sharpe.**

(Plate V. figs. 14 & 15.)

Turdus erythropleurus, *Sharpe*, *P. Z. S.* 1887, p. 515.*Merula erythropleura*, *Lister*, *P. Z. S.* 1888, p. 517; *Sharpe in Andrews's Mon. Christmas Island*, p. 49 (1900); *id. in Seeborn's Mon. Turdidæ*, ii. p. 173 (1902); *id. Hand-l.* iv. p. 121 (1903).

Like *M. nigrorum*, the Christmas-Island Ouzel appears to lay only two eggs in a clutch. The two sets in the Collection are of different types. The eggs of one are of a blunt oval form and of a pale bright bluish colour, spotted and blotched with rich dark purple-brown, the markings forming a large cap at the broad end. Those of the second clutch are of an elongated oval form and of a rather darker blue colour, evenly mottled and blotched all over, without any indication of a cap at the broad end, with dull rufous brown. All are moderately glossy. They measure respectively: 1·08 by ·80; 1·10 by ·79; 1·10 by ·80; and 1·14 by ·78.

Merula rufiventer*, Vieill.Turdus rufiventer*, *Seeborn*, *Cat. Birds B. M.* v. p. 222 (1881); *Sharpe in Seeborn's Mon. Turdidæ*, i. p. 291 (1899); *Nehrsk. Kat. Eiersamml.* p. 37 (1899).*Turdus rufiventris*, *Scl. & Huds. Argent. Orn.* i. p. 3 (1888).*Merula rufiventer*, *Sharpe*, *Hand-l.* iv. p. 121 (1903).

It would appear, if the specimens in the Museum are correctly named, that there are two types of the eggs of the Rufous-bellied Ouzel. Those of the first type are of a broad, blunt, oval form, pale bluish green or greenish, boldly marked with large blotches of rich purplish red or liver-brown and with underlying patches of lavender-grey or pale purple, more thickly at the larger end. In the second type the eggs are larger and of a more regular oval form, somewhat blunted; they have a greyish or pale stone ground-colour, rather thickly spotted, streaked and blotched, with reddish brown, fairly evenly over the whole surface, though perhaps somewhat more heavily at the broad end. The eggs of the first type measure respectively 1·02 × ·82; 1·07 × ·85; and 1·01 × ·81. Those of the second type 1·2 × ·86; 1·13 × ·88; and 1·12 × ·84.

***Merula magellanica*, King.**

Turdus magellanicus, *Hudson*, *P. Z. S.* 1872, p. 548; *Seebohm*, *Cat. Birds B. M.* v. p. 223 (1881); *Scl. & Huds. Argent. Orn.* i. p. 3 (1888); *James*, *New List Chilean Birds*, p. 1 (1892); *Sharpe in Seebohm's Mon. Turdidae*, i. p. 295 (1899); *Nehrk. Kat. Eiersamml.* p. 37 (1899).

Merula magellanica, *Sharpe*, *Hand-l.* iv. p. 121 (1903).

The eggs of the Magellan Ouzel are for the most part of a regular oval form, and fairly glossy. The ground-colour varies from a pale greenish white to a rather full greenish blue. The markings are of various shades of reddish brown and underlying lilac. On some specimens they consist chiefly of well-defined spots and streaks, not very thickly disposed over the shell, but coalescing together at the large end and forming an irregular cap. In a second type they consist of small specks and clouds, very densely distributed over the shell. Intermediate forms occur between these two types. A few examples have some black specks and lines intermingled with the other markings. Specimens measure from 1·07 to 1·3 in length, and from ·8 to ·92 in breadth.

Sharpe in Seeböhm's Mon. Turdidæ, i. p. 261 (1898).
Merula grayi, *Sharpe, Hand-l.* iv. p. 122 (1903).

The eggs of Gray's Ouzel are for the most part broad ovals, with the smaller end rather blunt. They have but little gloss. The ground-colour varies from cream-colour to a very pale bluish green, and is thickly speckled, mottled and streaked with reddish and purplish-brown and underlying lilac. The markings are evenly distributed over the shell, but occasionally form an ill-defined cap at the broad end. The eggs measure from .9 to 1.26 in length, and from .78 to .98 in breadth.

Merula tristis, *Sharpe, Hand-l.* iv. p. 123 (1903).

An egg of the Mexican White-throated Ouzel in the Collection, from the Crowley Bequest, has a rather bright pale blue ground, not very thickly sprinkled, except at the larger end where there is a distinct cap, with spots and small blotches of purple-brown and bright lilac, bearing a considerable resemblance to the lighter-coloured eggs of the Fieldfare. It measures 1.15 by .83.

Merula leucauchen (Sclater).

Turdus leucauchen, Seebohm, *Cat. Birds B. M.* v. p. 212 (1881); *Sharpe in Seebohm's Mon. Turdidæ*, i. p. 223 (1898); *Nehrk. Kat. Eiersamml.* p. 36 (1899).

Merula leucauchen, *Sharpe, Hand-l.* iv. p. 123 (1903).

The Collection contains three eggs of Sclater's White-throated Ouzel, which are greenish grey, spotted and blotched with rich chestnut-brown. Two have the markings fairly evenly distributed, though certainly rather denser and larger at the broad end; the other has a thick handsome zone in the same position. The respective measurements are 1.06 by .80; 1.10 by .81; and 1.12 by .83.

Merula gymnophthalmus, *Sharpe, Hand-l.* iv. p. 123 (1903).

The five eggs of the Bare-eyed Ouzel in the Collection from the island of Grenada, West Indies, are very variable in appearance, though they are all pale green, spotted with various tints of brown. Two of them are very thickly covered with dull brown blotches, in one example forming a heavy cap at the smaller end, while the other three are much less strongly marked, though the colour is decidedly richer, and many underlying spots of bright lilac are visible. In the latter, too, there is a conspicuous gathering of the spots

at the larger end. They measure from 1·05 to 1·12 by from ·78 to ·82.

Merula maculirostris, *Sharpe, Hand-l.* iv. p. 124 (1903).

The eggs of the Ecuadorian Dusky Ouzel are of a regular oval form and almost devoid of all gloss. They are of a faint blue or bluish-green ground-colour, somewhat thickly speckled and blotched with reddish brown and lilac. The markings are more dense at the broad end, where they form a very distinct cap. They average 1·18 by ·83.

Merula ignobilis, *Sharpe, Hand-l.* iv. p. 124 (1903).

The six eggs of the Colombian Dusky Ouzel in the Collection are of two very distinct types. The first is rather lightly marked with reddish purple and purplish brown, the spots and blotches being gathered together at the larger end on a ground of pale bluish grey to form an irregular cap. In the second the ground

is cream-colour, almost obscured by a dense freckling of dull reddish brown and faint lavender underlying markings. It is worthy of remark that one of each type occurs in the two pairs of eggs from Medellín: one of these pairs was obtained by Salmon with the female bird.

In size the eggs vary from 1.18 to 1.22 in length, and from .80 to .86 in breadth.

Merula unicolor (Tick.).

Merula unicolor, Seebohm, *Cat. Birds B. M.* v. p. 271 (1881); *Oates, Fauna Brit. Ind., Birds*, ii. p. 132 (1890); *id. ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 96 (1890); *Nehr. Kat. Eiersamml.* p. 38

(1899); *Sharpe in Seebohm's Mon. Turdidæ*, ii. p. 147 (1901); *id. Hand-l.* iv. p. 126 (1903).

The eggs of Tickell's Ouzel vary in shape from a blunt to an elongated oval, while sometimes they are spheroidal. They vary in colour from greyish white to pale green, streaked and mottled with rich reddish brown and pale underlying purple. In some specimens the markings are small freckles with a cap or zone at the larger end, in others they are larger and dense, covering the greater part of the ground-colour. They measure from .92 to 1.20 in length, and from .70 to .83 in breadth.

Merula layardi, *Seebohm*.

(Plate VI. fig. 3.)

Merula vitiensis (*nec Layard*), *Seebohm, Cat. Birds B. M.* v. p. 278 (1881); *Nehrke. Kat. Eiersamml.* p. 38 (1899).

Merula layardi, *Seebohm, P. Z. S.* 1890, p. 667; *Sharpe in Seebohm's Mon. Turdidæ*, ii. p. 135 (1901); *id. Hand-l.* iv. p. 126 (1903).

Two pairs of the eggs of the Viti-Levu Ouzel, from the Crowley Bequest, have a similar ground-colour, a dull and pale greenish blue, but they differ a little in their markings, which in one pair are bold and of a bright purple-brown, chiefly at the large end; while in the other they are duller in colour and take the shape of more numerous spots and small blotches: these are evenly distributed over the surface, but there is an additional thickening or cap at the larger end. In size they range from 1.13 to 1.19 in length, and from .82 to .85 in breadth.

Merula xanthopus (*Forster*).

(Plate VI. fig. 2.)

Merula xanthopus, *Seebohm, Cat. Birds B. M.* v. p. 276 (1881); *Sharpe in Seebohm's Mon. Turdidæ*, ii. p. 139 (1901); *id. Hand-l.* iv. p. 126 (1903).

There is one egg of the New-Caledonian Ouzel in the Collection, obtained by Mr. E. L. Layard. It has the ground-colour of a rather bright greenish blue, closely mottled over with streaks and blotches of dull chestnut. In shape it is a regular oval, measuring 1.20 by .89.

Merula olivacea (Linn.).

(Plate VI. figs. 5 & 7.)

Turdus olivaceus, Sharpe, ed. Layard's *Birds S. Africa*, p. 200 (1875-84); Seebohm, *Cat. Birds B. M.* v. p. 227 (1881); Sharpe in Seebohm's *Mon. Turdidæ*, i. p. 307 (1899); Nehrck. *Cat. Eiersamml.* p. 37 (1899); Stark & Selater, *Fauna S. Africa, Birds*, ii. p. 175 (1901).
Merula olivacea, Sharpe, *Hand-l.* iv. p. 127 (1903).

Though the Museum series of the eggs of the Cape Ouzel is quite a small one, it displays considerable variation in colour and size, especially the latter. The ground-colour ranges from a delicate verditer-blue to a much less striking bluish grey, the markings in all cases being large and handsome and not very thickly distributed, though more numerous at the obtuse end, and in colour ranging from pale chestnut to purplish brown. In size they vary from 1.10 to 1.25 in length, and from .81 to .89 in breadth.

Semimerula gigas, Sharpe, *Hand-l.* iv. p. 129 (1903).

The eggs of the Giant Ouzel vary in shape from a broad to an elongated oval. They are blue of various shades, speckled, mottled and spotted with reddish or purplish brown and lilac. On some specimens the markings consist entirely of small specks;

on others of streaks and spots, and they are very evenly distributed over the entire surface of the shell, but not very densely. Examples measure from 1.28 to 1.56 in length, and from .90 to 1.00 in breadth.

Genus *GEOCICHLA*, *Temm.*

Geocichla cyanonota (*J. & S.*).

Geocichla cyanonotus, *Seeböhm, Cat. Birds B. M.* v. p. 172 (1881); *Oates, Fauna Brit. Ind., Birds*, ii. p. 139 (1890); *id. ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 98 (1890); *Seeböhm, Mon. Turdidae*, i. p. 55 (1898); *Nehrk. Kat. Eiersamml.* p. 35 (1899).
Geocichla cyanonota, *Sharpe, Hand-l.* iv. p. 132 (1903).

The eggs of the White-throated Ground-Thrush are of a broad pointed oval form, and rather glossy. They are pale bluish or greenish white, profusely speckled, streaked and blotched with various shades of reddish and purple-brown and underlying violet. Some specimens are more densely marked than others, especially at the broad end, where a broad cap of confluent markings is often formed. The eggs measure from .94 to 1.04 in length, and from .71 to .78 in breadth.

The eggs of the Siberian Ground-Thrush in the Collection vary from a regular to a blunt oval form and are not particularly glossy. They are of varying shades of greenish blue, mottled and streaked with pinkish or reddish brown and underlying purple-grey. In one specimen the markings are larger than usual and well-defined, allowing much of the ground-colour to be seen; in the others they are small, more or less confluent, and cover the greater portion of the surface of the egg. In size they vary from 1.04 to 1.22 in length, and from .76 to .88 in breadth.

(Plate VI. fig. 13.)

Geocichla mollissima, Seebohm, *Cat. Birds B. M.* v. p. 159 (1881); *id. Mon. Turdidæ*, i. p. 29 (1898); *Nehrke. Kat. Eiersamml.* p. 35 (1899).

Oreocincla mollissima, Oates, *Fauna Brit. Ind., Birds*, ii. p. 154 (1890); *id. ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 108 (1890); *Osmaston, Journ. Bomb. Nat. Hist. Soc.* xi. p. 472 (1898).

Oreocichla mollissima, Sharpe, *Hand-l.* iv. p. 137 (1903).

The eggs of the Plain-backed Mountain-Thrush in the Collection are of an elongated and narrow oval shape, one of them unusually so, and exhibit little gloss. They are stone-coloured, thickly set with spots, freckles, and moderate-sized blotches, especially at the broad end, of two shades of dark reddish brown and underlying lavender-grey. The markings are more or less connected over the entire surface of the egg, but do not obscure the ground-colour. The specimens measure respectively: 1·32 by ·89; 1·4 by ·88.

2. Native Sikhim, June.

Hume Coll.

Genus ZOOTHERA, Vig.

Zoothera marginata, Blyth.

(Plate VI. fig. 14.)

Geocichla marginata, Seebohm, *Cat. Birds B. M.* v. p. 162 (1881); *id. Mon. Turdidae*, i. p. 79 (1898); *Nehr. Kat. Eiersamml.* p. 35 (1899).

Genus TURDUS, Linn.

Turdus viscivorus, Linn.

Turdus viscivorus, Thien, *Fortpflanz. ges. Vög.* tab. xxiv. fig. 11, a-c (1845-54); *Baedeker, Eier Eur. Vög.* tab. 4. fig. 1, tab. 75. fig. 1 (1856-63); *Hewitson, Eggs of Brit. Birds*, i. p. 79, pl. xxiii. fig. 1 (1856); *Dresser, Birds Eur.* ii. p. 3 (1871); *Saunders, Ibis*, 1871, p. 209; *Seebohm, Cat. Birds B. M.* v. p. 194 (1881); *id. Brit. Birds*, i. p. 207, pl. 8 (1883); *Oates, ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 106 (1890); *Seebohm, Eggs of Brit. Birds*, p. 177, pl. 50. figs. 4, 6 (1896); *Sharpe in Seebohm's Mon. Turdidae*, i. p. 139 (1898); *id. Hand-l.* iv. p. 138 (1903).

In the variations of form, the eggs of the Mistle-Thrush closely follow those of the Song-Thrush (*vide infra*, p. 127), but they are not so glossy, and their coloration is extremely different.

The ground-colour varies from pale bluish grey to pinkish brown, and the markings, which are pretty evenly distributed over the shell, consist of spots, small blotches, and clouds of various shades of rich purplish brown, not infrequently forming an irregular cap at the larger, and occasionally at the smaller, end. The underlying markings are prominent, and are of a pale purplish or lilac colour.

In some specimens the markings are bold, in others they are small throughout.

The eggs measure from 1·03 to 1·3 in length, and from ·8 to ·92 in breadth.

Turdidae*, i. p. 201 (1898); *id. Hand-l.* iv. p. 138 (1903).

Much variation occurs in the form and size of the eggs of the Fieldfare, but they are still more variable in coloration. The ground-colour is tolerably constant, ranging from a pale bluish-green to a tint almost as bright and strong as that of the Song-Thrush's egg.

The rich reddish-brown markings, however, are so different in their character, as to suggest a division into types as follows:— (i.) A small densely freckled egg which may be compared to that of the Redwing; (ii.) a more heavily streaked and larger egg, the markings evenly distributed over the whole surface; (iii.) eggs with similar streaks, but these of a brighter colour and collected into a cap at the larger end. Types ii. and iii. may be likened respectively to the duller and more handsome forms of the Blackbird's eggs.

(iv.) with fewer, bolder, and richer spots and small blotches, more or less confluent, resembling typical eggs of the Ring-Ouzel; and (v.) an extreme form, in which the markings are scanty though bold and often of a bright tint, and usually more numerous at the larger end, the ground-colour being of the bright clear blue already alluded to. Two eggs of this last-named type in the Collection seem worthy of separate notice: one, from the Sundal Valley, Norway, has the spots and blotches, which are not very thickly collected at the larger end, of a very pale reddish lilac without any admixture of a darker colour; while the second, from Molde, Norway, of a paler blue ground-colour, in addition to a few specks of this same colour, has only one other marking, a very conspicuous scrawl at the larger end, of intense purplish-black; this is more than half an inch in length and exactly as if it had been traced with a broad and heavy stroke of the pen. In many cases the occurrence is noticed of a single egg (rarely two) of type v. in a clutch of other types. Frequent instances of this are found in the Collection, and there are two clutches in which all the eggs are of that type.

They measure from 1.03 to 1.35 in length, and from .73 to .9 in breadth.

Turdus pallidus (*Gm.*).

(Plate VI. fig. 11.)

- Merula pallida*, *Seebohm, Cat. Birds B. M.* v. p. 274 (1881); *Nehrke, Kat. Eiersamml.* p. 38 (1899); *Sharpe in Seebohm's Mon. Turdidae*, ii. p. 185 (1902).
Turdus pallidus, *Tacz. Faune Orn. Sibér. Orient.* p. 309 (1891); *Sharpe, Hand-l.* iv. p. 138 (1903).

An egg of the Pale Ouzel in the Museum Collection bears a strong resemblance to a common form of the egg of *Merula merula*. It is dull greenish, rather glossy, finely freckled all over with reddish brown, and having in addition a few coarser spots of the same colour here and there. It measures 1.16 by .82.

1. Amur-land, 9th April (*Nehrke*) Crowley Bequest.
Coll.

Turdus atrigularis (*Temm.*).

- Turdus atrigularis*, *Dresser, Birds Eur.* ii. p. 83 (1878); *Tacz. Faune Orn. Sibér. Orient.* p. 305 (1891); *Fopham, Ibis*, 1898, p. 494; *Dresser, Ibis*, 1901, p. 446, pl. ix. figs. 9-12; *Sharpe, Hand-l.* iv. p. 139 (1903).
Merula atrigularis, *Seebohm, Cat. Birds B. M.* v. p. 267 (1881); *id. Brit. Birds*, i. p. 249 (1883); *id. Eggs of Brit. Birds*, p. 182, pl. 51. fig. 1 (1896); *Nehrke, Kat. Eiersamml.* p. 38 (1899); *Sharpe in Seebohm's Mon. Turdidae* ii. p. 191 (1902).

The small series of eggs of the Black-throated Ouzel in the Collec-

tion, seems to prove that they are very similar to the common type of egg of *Merula merula*. They are pale bluish green, speckled and mottled, generally more thickly at one end, with reddish brown and pale lilac. They vary in size from 1.12 to 1.21 in length, and from .80 to .85 in breadth.

Turdus chrysolaus (Temm.).

(Plate VI. figs. 15 & 18.)

Merula chrysolaus, Seeböhm, *Cat. Birds B. M.* v. p. 275 (1881); *id. Birds Japan. Emp.* p. 48 (1890); *Nehrke. Kat. Eiersamml.* p. 38 (1899); *Sharpe in Seeböhm's Mon. Turdidæ*, ii. p. 167 (1902).

Turdus chrysolaus, *Tacz. Faune Orn. Sibér. Orient.* p. 313 (1891); *Sharpe, Hand-l.* iv. p. 139 (1903).

Though variable in ground-colour, the eggs of the Brown Japanese Ouzel in the Collection are of the ordinary Blackbird type. They vary from bluish to dull greenish blue, in the majority of cases marked with minute specks and small streaks of pale rufous brown and lilac, rather dense, and evenly distributed over the shell. In some eggs the markings are brighter in colour, fewer, and larger, being collected together in a more or less irregular cap. The sizes vary from 1.05 to 1.18 in length, by from .76 to .85 in breadth.

Turdus obscurus (Gm.).

Turdus obscurus, *Dresser, Birds Eur.* ii. p. 71 (1878); *Seeböhm, Ibis*, 1879, p. 4; *Tacz. Faune Orn. Sibér. Orient.* p. 306 (1891); *Popham, Ibis*, 1898, p. 493; *Dresser, Ibis*, 1901, p. 445, pl. ix. figs. 5-8; *Sharpe, Hand-l.* iv. p. 140 (1903).

Merula obscura, *Seeböhm, Cat. Birds B. M.* v. p. 273 (1881); *Nehrke. Kat. Eiersamml.* p. 38 (1899); *Sharpe in Seeböhm's Mon. Turdidæ*, ii. p. 175 (1902).

In colour and markings the eggs of the Dark Ouzel in the Collection are inseparable from those of *Merula merula*, but they are considerably smaller. They are bluish green, speckled and mottled

with reddish brown and lilac, and measure from 1·05 to 1·10 in length, and from ·75 to ·81 in breadth.

Turdus torquatus (Linn.).

- Turdus torquatus*, *Hewitson, Eggs of Brit. Birds*, i. p. 93, pl. xxv. figs. iii & iv (1856); *Dresser, Birds Eur.* ii. p. 113, part. (1872); *Sharpe, Hand-l.* iv. p. 140 (1903).
Merula torquata, *Seebohm, Cat. Birds B. M.* v. p. 246, part. (1881); *id. Brit. Birds*, i. p. 243, pl. 8 (1883); *id. Eggs of Brit. Birds*, p. 181, pl. 50. fig. 10 (1896); *Sharpe in Seebohm's Mon. Turdidæ*, ii. p. 27 (1899); *Nehr-k. Kat. Eiersamml.* p. 37 (1899).

The series of eggs of the Ring-Ouzel in the Collection, renders it at once evident that, in spite of their general similarity to those of the Blackbird and Fieldfare, and, in some cases, the Missel-Thrush, a clearer type, with bolder and richer markings, prevails among them.

In form they vary as much as the eggs of other Thrushes, and they have the same two shades of ground-colour, a greenish-blue and a stone-colour; the markings are fairly evenly distributed, not often coalescing into a cap at one end, but they are of all tints of reddish brown, from bright chestnut to a dingy purple.

In size they range from 1·05 to 1·30 in length, and from ·79 to ·90 in breadth.

Turdus alpestris (*Brehm*).

- Merula alpestris*, *C. L. Brehm*, *Isis*, 1828, p. 1281; *Sharpe in Seebohm's Mon. Turdidæ*, ii. p. 35 (1899).
Turdus torquatus, *Thien. Fortpflanz. ges. Vög.* tab. xxiv. fig. 17, a-c (1845-54); *Baedeker, Eier Eur. Vög.* tab. 4. fig. 7, tab. 75. fig. 8 (1855-63); *Saunders, Ibis*, 1871, p. 209.
Turdus alpestris, *Dresser, Birds Eur.* ix (*Suppl.*) p. 11 (1895); *Sharpe, Hand-l.* iv. p. 140 (1903).

The eggs of the Alpine Ring-Ouzel, judging from the small series in the Collection, do not differ from those of *T. torquatus*. The majority resemble the common type of Blackbird's egg. Specimens measure from 1.14 to 1.34 in length, and from .85 to .91 in breadth.

Turdus castaneus, *Gould*.

(Plate VI. figs. 16 & 17.)

- Merula castanea*, *Seebohm, Cat. Birds B. M.* v. p. 259 (1881); *Oates, Fauna Brit. Ind., Birds*, ii. p. 128 (1890); *id. ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 92 (1890); *Nehrke, Kat. Eiersamml.* p. 28 (1899); *Sharpe in Seebohm's Mon. Turdidæ*, ii. p. 111 (1900).
Turdus castaneus, *Sharpe, Hand-l.* iv. p. 140 (1903).

The type of the eggs of the Grey-headed Chestnut Thrush in the Collection is very similar to that of the previously described *Merula bouboul* (*cf.* p. 95). They are of a pale greenish-white colour, profusely and evenly mottled and speckled all over with pale chestnut-brown. One of the eggs differs from this type in being much less heavily marked, the dense freckling being replaced by a mottling of rather darker brown, much of the ground-colour being visible. They measure from 1.10 to 1.25 in length, and from .86 to .9 in breadth.

M.* v. p. 220 (1881); *Sharpe in Seebohm's Mon. Turdidæ*, i. p. 269 (1899); *Nehrke, Kat. Eiersamml.* p. 36 (1899); *Sharpe, Hand-l.* iv. p. 141 (1903).
- Turdus migratorius*, var. *migratorius*, *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 25 (1874).
- Merula migratoria*, *Nelson, Report Nat. Hist. Alaska*, p. 219 (1887); *MacFarlane, Proc. U.S. Nat. Mus.* xiv. p. 445 (1891).

The eggs of the Red-breasted Thrush or American "Robin" are for the most part of a pointed oval form, very glossy and of a deep greenish-blue colour. Judging from the considerable series in the Collection, they are remarkably free from variation in size or tint. They measure from 1.05 to 1.26 in length, and from .73 to .88 in breadth.

Hylocichla mustelina, *Sharpe, Hand-l.* iv. p. 141 (1903).

Eggs of the Wood-Thrush show considerable variation in form, from a blunt to an ordinary, or even a much elongated, oval, and are decidedly glossy. They are of a pale blue or greenish-blue colour, unspotted; at least it is very rare to meet with any markings on them. In size they vary from ·95 to 1·12 in length, by from ·70 to ·81 in breadth.

Hyllocichla aliciæ (Baird).

Turdus aliciæ, *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 11 (1874); *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 12 (1879); *Seebohm, Cat. Birds B. M.* v. p. 202 (1881); *Nelson, Report Nat. Hist. Alaska*, p. 216 (1887); *MacFarlane, Proc. U.S. Nat. Mus.* xiv. p. 445 (1891); *Sharpe in Seebohm's Mon. Turdidæ*, i. p. 163 (1898); *Nehrke. Kat. Eiersamml.* p. 36 (1899).
Hyllocichla aliciæ, *Sharpe, Hand-l.* iv. p. 142 (1903).

The eggs of the Grey-cheeked Thrush are very similar to those of *H. swainsoni*, but, according to Messrs. Baird, Brewer & Ridgway (*l. c.*) the eggs of the present species have a more distinctly blue ground-colour. They measure from .88 to .94 in length, and from .65 to .68 in breadth.

Hylocichla swainsoni, *Sharpe, Hand-l.* iv. p. 142 (1903).

The eggs of the Olive-backed Thrush are of a rather pointed oval shape and slightly glossy. They are greenish blue, speckled and mottled with russet, pinkish brown, and underlying lavender or lilac. The markings are generally evenly disposed over the surface of the shell, but occasionally they form an indistinct cap at the broad end. Specimens measure from ·8 to ·95 in length, and from ·61 to ·7 in breadth.

Turdidæ*, i. p. 123 (1898); *Nehrke, Kat. Eiersamml.* p. 35 (1899).

Hylocichla iliaca, *Sharpe, Hand-l.* iv. p. 143 (1903).

The eggs of the Redwing are of a slightly elongated oval form, broad or blunt ovals being exceptional. They show a considerable amount of gloss. They are pale greenish blue, marked with various shades of pale reddish brown; the majority are freckled and streaked very evenly and densely all over the surface of the shell; a few are less thickly and evenly blotched or streaked. There is a great uniformity in the coloration of the eggs of the Redwing, and there is little tendency towards the formation of any cap or gathering of the markings at the broad end. Most of the specimens in the Collection have a few and insignificant black specks and short hair-lines about the broader end, extending to the middle of the egg in some cases. Examples measure from ·9 to 1·1 in length, and from ·7 to ·81 in breadth.

Hylocichla musica, *Sharpe*, *Hand-l.* iv. p. 144 (1903).

The eggs of the Song-Thrush are chiefly of a broad oval shape, but some are elongated and pointed, and others are spheroidal. They are, as a rule, very glossy.

The ground-colour is a bright, clear greenish blue, marked with roundish spots of dark purplish-brown or black; at the broad end the markings are generally larger and more numerous, some being of irregular shape and more of the nature of blotches.

Some eggs are also marked with underlying spots of lilac, but the majority entirely want these secondary markings. Occasionally specimens are marked with pale reddish brown or lilac-brown, in which case the spots are more blotchy and cloudy, unlike the ordinary neat circular markings, and sometimes, but very rarely, the eggs are found perfectly plain.

A very extraordinary pair in the Collection, from Warminster, Wiltshire, are pure white, spotted boldly but not thickly, and chiefly at the larger end, with pale rusty-brown and reddish lilac; this appears to be a most unusual variety.

The eggs of the Song-Thrush measure from .96 to 1.2 in length, and from .77 to .9 in breadth.

Genus **MONTICOLA**, *Boie*.**Monticola saxatilis** (*Linn.*).

Turdus saxatilis, *Thien. Fortpflanz. ges. Vög.* tab. xxiv. fig. 1, *a, b* (1845-54).

Petrocincla saxatilis, *Baedeker, Eier Eur. Vög.* tab. 27. fig. 10 (1855-63); *Hewitson, Eggs of Brit. Birds*, i. p. 95, pl. xxvi. fig. ii (1856).

Monticola saxatilis, *Dresser, Birds Eur.* ii. p. 129 (1872); *Seebohm, Cat. Birds B. M.* v. p. 313 (1881); *id. Brit. Birds*, i. p. 281, pl. 8 (1883); *id. Eggs of Brit. Birds*, p. 186, pl. 51. fig. 4 (1896); *Sharpe, Hand-l.* iv. p. 144 (1903).

The eggs of the Rock-Thrush vary in shape from a broad to a narrow oval, and have a considerable amount of gloss. The ground-colour is a pale delicate bluish green, either plain or marked with a few small brown specks, usually on the larger end. They vary from .99 to 1.13 in length, and from .7 to .81 in breadth.

2. Vosges Mts., France (*Mougel: Hargitt Coll.*). Seebohm Coll.

4. Greece. Crowley Bequest.

Genus **PETROPHILA**, *Swains*.**Petrophila cyanus** (*Linn.*).

Turdus cyaneus, *Thien. Fortpflanz. ges. Vög.* tab. xxiv. fig. 3, *a, b* (1845-54).

Petrocossyphus cyanus, *Baedeker, Eier Eur. Vög.* tab. 27. fig. 11 (1855-63); *Dresser, Birds Eur.* ii. pp. 129, 139 (1871-2).

Petrocincla cyanea, *Tristram, Ibis*, 1867, p. 89; *Saunders, Ibis*, 1871, p. 210; *Bree, Birds Eur.* 2nd ed. ii. p. 57, pl. (1875).

Monticola cyanus, *Seebohm, Cat. Birds B. M.* v. p. 316 (1881).

Petrophila cyanus, *Oates, Fauna Brit. Ind., Birds*, ii. p. 146 (1890); *Sharpe, Hand-l.* iv. p. 144 (1903).

Petrophila cyana, *Oates ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 105 (1890).

Resembling the eggs of the preceding species, *M. saxatilis*, in size and ground-colour, those of the Western Blue Rock-Thrush are more easily divisible into a plain and a spotted type, and in the latter the spots are more numerous. In the Museum series these two types are about equally represented.

Petrophila manilla, *Sharpe*, *Hand-l.* iv. p. 144 (1903).

There is considerable difference in the size of the eggs of the Chinese series of the Eastern Blue Rock-Thrush in the Collection. In colour the eggs vary but little, being of the same delicate pale blue tint as those of their western congeners, in some cases sparingly dotted with rufous-brown at the larger end. In size they range from 0·9 to 1·27 in length, and from 0·75 to 0·85 in breadth.

Eggs of the Blue-headed Rock-Thrush vary from a regular to a narrow oval shape and possess a considerable amount of gloss. They are cream-coloured, speckled and mottled, more densely at the broad end as a rule, with pale brownish pink or pale chestnut, somewhat resembling large pale eggs of *Erithacus rubecula*. They measure from ·9 to ·97 in length, and from ·67 to ·71 in breadth.

Petrophila rupestris (*Vieill.*).

(Plate VII. fig. 2.)

Monticola rupestris, *Sharpe, ed. Layard's Birds S. Africa*, p. 219 (1875-84); *Seebohm, Cat. Birds B. M.* v. p. 322 (1881); *Nehrk. Kat. Eiersamml.* p. 40 (1899); *Stark & Selater, Fauna S. Africa, Birds*, ii. p. 181 (1901).

Petrophila rupestris, *Sharpe, Hand-l.* iv. p. 144 (1903).

There are three eggs of the Cape Rock-Thrush in the Collection. One example is of a bluish-white colour, very sparingly speckled with dark brown; another is of a pale blue colour, mottled with pale rufous at the broad end; and another resembles in coloration the eggs of *P. cinclorhyncha*. These three specimens measure respectively: 1·07 by ·8; 1·04 by ·71; 1·05 by ·78.

Petrophila erythrogaster (*Vig.*).

(Plate VII. fig. 3.)

Monticola erythrogaster, *Seebohm, Cat. Birds B. M.* v. p. 325 (1881); *La Touche, Ibis*, 1899, p. 179.

Petrophila erythrogastra, *Oates, Fauna Brit. Ind., Birds*, ii. p. 143 (1890); *id. ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 102 (1890).

Petrophila erythrogaster, *Sharpe, Hand-l.* iv. p. 145 (1903).

An egg of the Chestnut-bellied Rock-Thrush in the Collection is of a very regular oval shape and moderately glossy. It is of a pale creamy-buff colour, freckled all over with very faint brownish pink. It measures 1·05 by ·79. It appears, from what Mr. La Touche writes (*l. c.*), that this egg was addled, and it may therefore be somewhat discoloured and not of a typical character.

Genus THARRHALEUS, *Kaup*.

Tharrhaleus modularis (*Linn.*).

Accentor modularis, *Thien. Fortpflanz. ges. Vög.* tab. xxiii. fig. 13, *a, b* (1845-54); *Baedeker, Eier Eur. Vög.* tab. 27. fig. 2 (1855-63); *Hewitson, Eggs of Brit. Birds*, i. p. 97, pl. xxvii. fig. i (1856); *Dresser, Birds Eur.* iii. p. 39 (1873); *Sharpe, Cat. Birds B. M.* vii. p. 649 (1883); *Seebohm, Brit. Birds*, i. p. 497, pl. 12 (1883); *id. Eggs of Brit. Birds*, p. 215, pl. 54. fig. 1 (1896).

Tharrhaleus modularis, *Sharpe, Hand-l.* iv. p. 146 (1903).

The eggs of the Common Accentor or 'Hedge-Sparrow' vary from a broad to a long oval form, with the smaller end somewhat sharply pointed; some have a dull roughish texture, others a fair amount of gloss. They are of a beautiful spotless greenish-blue colour, measuring from .71 to .83 in length, and from .54 to .66 in breadth.

Tharrhaleus rubidus (*T. & S.*).

(Plate VII. fig. 21.)

Accentor rubidus, *Sharpe, Cat. Birds B. M.* vii. p. 652 (1883); *Seebohm, Birds Japan. Emp.* p. 56 (1890).

Accentor fervidus, *Sharpe, Cat. Birds B. M.* vii. p. 653 (1883).

Tharrhaleus rubidus, *Sharpe, Hand-l.* iv. p. 146 (1903).

Tharrhaleus fervidus, *Sharpe, Hand-l.* iv. p. 146 (1903).

The eggs of the Japanese Hedge-Sparrow are precisely similar to those of the Common Hedge-Sparrow, but smaller. Two specimens measure respectively: .7 by .57; .72 by .57.

2. Japan (*H. Pryer*).

Seebohm Coll.

Tharrhaleus fulvescens (*Severtz.*).

Accentor fulvescens, *Sharpe, Cat. Birds B. M.* vii. p. 655 (1883); *Tacz. Faune Orn. Sibér. Orient.* i. p. 220 (1891); *Nehr. Kat. Eiersamml.* p. 65 (1899).

Tharrhaleus fulvescens, *Oates, Fauna Brit. Ind., Birds*, ii. p. 171 (1890); *Sharpe, Hand-l.* iv. p. 147 (1903).

The two eggs of the Brown Accentor in the Collection are not to be distinguished from those of *T. modularis*. They measure respectively: .82 by .61; .80 by .61.

2. Kuldja, 25th May (*Tancré*).

Crowley Bequest.

Tharrhaleus atrigularis (*Brandt*).

Accentor atrigularis, *Sharpe, Cat. Birds B. M.* vii. p. 656 (1883); *Nehr. Kat. Eiersamml.* p. 65 (1899).

Tharrhaleus atrigularis, *Oates, Fauna Brit. Ind., Birds*, ii. p. 170 (1890); *Sharpe, Hand-l.* iv. p. 147 (1903).

Two eggs of the Black-throated Accentor in the Collection resemble those of *T. modularis*, but are slightly greener in tint. They measure respectively: .7 by .6; .72 by .6.

2. Kuldja (*Tancré: Nehr. Korn Coll.*).

Crowley Bequest.

Tharrhaleus jerdoni (*Brooks*).

Accentor jerdoni, *Sharpe, Cat. Birds B. M.* vii. p. 660 (1883).

Tharrhaleus jerdoni, *Oates, Fauna Brit. Ind., Birds*, ii. p. 172 (1890); *id. ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 114 (1890); *Sharpe, Hand-l.* iv. p. 147 (1903).

Eggs of Jerdon's Accentor do not appear to be separable from those of *T. modularis*. Three examples measure respectively: .72 by .55; .75 by .55; .73 by .55.

Genus **EPHTHIANURA**, *Gould*.**Ephthianura albifrons** (*Jard. & Selby*).

Ephthianura albifrons, *Ramsay, Ibis*, 1863, p. 178; *Gould, Handb. Birds Austr.* i. p. 377 (1865); *Sharpe, Cat. Birds B. M.* vii. p. 666 (1883); *North, Nests & Eggs Austr. Birds*, p. 144, pl. xiii. fig. 11 (1889); *Nehrke, Kat. Eiersamml.* p. 65 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 282 (1901); *Sharpe, Hand-l.* iv. p. 148 (1903).

The eggs of the White-fronted Bush-Chat are of a regular oval form and delicate texture, but almost devoid of gloss. They are of a white or pinkish-white colour, lightly speckled and spotted, chiefly in a zone round the broad end, with lilac-red and lavender in some specimens, very deep purplish brown and lavender in others. Examples measure from .68 to .73 in length, and from .5 to .55 in breadth.

Ephthianura aurifrons, *Gould*.

Ephthianura aurifrons, *Gould, Handb. Birds Austr.* i. p. 380 (1865); *Sharpe, Cat. Birds B. M.* vii. p. 668 (1883); *North, Nests & Eggs Austr. Birds*, p. 144 (1889); *Nehrke, Kat. Eiersamml.* p. 65 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 285, pl. 11 (1901); *Sharpe, Hand-l.* iv. p. 148 (1903).

The egg of the Orange-fronted Bush-Chat in the Collection is of

the same type as those of *E. albifrons*, being white, speckled, chiefly at the broad end, with two shades of purplish-brown. It measures .67 by .54.

1. South Australia.

Gould Coll.

Genus **HENICURUS**, *Temm.*

Henicurus leschenaulti (*Vieill.*).

Henicurus leschenaulti, *Sharpe, Cat. Birds B. M.* vii. p. 313 (1883); *Oates, Fauna Brit. Ind., Birds*, ii. p. 86 (1890); *Nehrck. Kat. Eiersamml.* p. 57 (1899); *Sharpe, Hand-l.* iv. p. 148 (1903).

The eggs of Leschenault's Fork-tail in the Collection are of an ordinary oval shape and slightly glossy. They are of a pinkish-cream or stone-colour, irregularly spotted all over, but not thickly, with umber-brown and pale under-lying violet. They measure respectively: .99 by .71; 1.0 by .7.

2. Java, 22nd April.

Crowley Bequest.

Henicurus immaculatus, *Hodgs.*

Henicurus immaculatus, *Sharpe, Cat. Birds B. M.* vii. p. 314 (1883); *Oates, Fauna Brit. Ind., Birds*, ii. p. 85 (1890); *id. ed. Hume, Nests & Eggs Ind. Birds* ii. p. 62 (1890); *Nehrck. Kat. Eiersamml.* p. 58 (1899); *Sharpe, Hand-l.* iv. p. 149 (1903).

An egg of the Black-backed Fork-tail is of a regular oval form and possesses a small amount of gloss. It is of an extremely pale bluish-white colour, sparingly blotched and spotted, except at the larger end, where the markings are confluent and form a pronounced cap, with very pale rufous and lilac-grey. It measures .85 by .63.

1. Baunee, Pegu Hills, 20th April
(*E. W. Oates*).

Oates Coll.

Henicurus schistaceus, *Hodgs.*

Henicurus schistaceus, *Sharpe, Cat. Birds B. M.* vii. p. 315 (1883); *Oates, Fauna Brit. Ind., Birds*, ii. p. 84 (1890); *id. ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 60 (1890); *La Touche, Ibis*, 1899, p. 194; *Nehrck. Kat. Eiersamml.* p. 58 (1899); *Sharpe, Hand-l.* iv. p. 149 (1903).

The ground-colour of Indian eggs of the Slaty-backed Fork-tail is of the faintest possible tint of bluish white; the shell, which is very delicate in texture and rather glossy, is sparingly dotted and blotched with two shades of brownish red, these markings increasing in number and intensity towards the larger end, where they form a more or less conspicuous cap. Underlying this cap are some faint lavender blotches. An egg from China is of a different type, being

finely and evenly speckled all over with pale rufous. The eggs are of a regular or sometimes slightly broadened oval form, and measure from .84 to .87 in length, and from .62 to .65 in breadth.

Henicurus guttatus, Gould.

Henicurus guttatus, Sharpe, *Cat. Birds B. M.* vii. p. 316 (1883); *Oates, Fauna Brit. Ind., Birds*, ii. p. 84 (1890); *id. ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 58 (1890); *Nehr. Kat. Eiersamml.* p. 58 (1899); *Sharpe, Hand-l.* iv. p. 149 (1903).

The more highly-coloured eggs of the Eastern Spotted Fork-tail bear a general resemblance to those of *H. leschenaulti*, but the typical eggs are paler in tint, the creamy or light stone-coloured ground being more closely freckled and streaked, and in some cases clouded and spotted at the larger end, with dull reddish and yellowish brown. Small spots of a darker brown occur on several of the eggs of the *H. leschenaulti* type, and there are purplish blotches underlying the cap, where one is present, at the broad end.

In shape the eggs vary from a slightly elongated to a broad oval. They measure from .86 to 1.00 in length, and from .65 to .70 in breadth.

Phœnicurus aureus (Gm.).

(Plate VII. fig. 5.)

Ruticilla aurea, *Tacz. J. f. O.* 1872, p. 362, 1873, taf. i. fig. 11; *Seebohm, Cat. Birds B. M.* v. p. 345 (1881); *Oates, Fauna Brit. Ind., Birds*, ii. p. 93 (1890); *Tacz. Faune Orn. Sibér. Orient.* i. p. 326 (1891); *Nehr. Kat. Eiersamml.* p. 40 (1899).

Phœnicurus aureus, *Sharpe, Hand-l.* iv. p. 151 (1903).

Eggs of the Daurian Redstart are of a broad oval shape, moderately glossy, and of a very pale blue colour, speckled and

mottled with pale rufous, chiefly at the broad end. Four examples in the Collection measure respectively: ·71 by ·55; ·68 by ·57; ·65 by ·55; ·71 by ·53.

1. Askold Island (*Dörries*).
3. Amur-land.

Seeböhm Coll.
Crowley Bequest.

Phœnicurus erythronotus (*Eversm.*).

Ruticilla erythronota, *Seeböhm, Cat. Birds B. M. v. p. 348* (1881); *Oates, Fauna Brit. Ind., Birds, ii. p. 94* (1890); *Tacz. Faune Orn. Sibér. Orient. p. 331* (1891); *Nehr. Kat. Eiersamml. p. 40* (1899).
Phœnicurus erythronotus, *Sharpe, Hand-l. iv. p. 152* (1903).

The eggs of Eversmann's Redstart are of the same type as those of *P. auroreus*. They are pale blue, delicately mottled and speckled with pale rufous, the markings forming an ill-defined zone round the broad end. Two examples measure respectively: ·76 by ·57; ·7 by ·54.

2. Kuldja (*Nehrkorn Coll.*).

Crowley Bequest.

Phœnicurus frontalis (*Vig.*).

Ruticilla frontalis, *Seeböhm, Cat. Birds B. M. v. p. 349* (1881); *Pleske, Prjev. Reisen, Aves, p. 64, pl. v. fig. 5* (1889); *Oates, Fauna Brit. Ind., Birds, ii. p. 91* (1890); *id. ed. Hume, Nests & Eggs Ind. Birds, ii. p. 64* (1890); *Hartert, Nov. Zool. i. p. 669* (1894); *Osmaston, Journ. Bomb. Nat. Hist. Soc. xi. p. 471* (1898); *Nehr. Kat. Eiersamml. p. 40* (1899).
Phœnicurus frontalis, *Sharpe, Hand-l. iv. p. 152* (1903).

The eggs of the Blue-fronted Redstart are either of two very distinct types, or they have in some cases been wrongly identified by the naturalists who collected them.

Three eggs sent to Mr. Hume from Sikhim, and now in the Collection, are avowedly of somewhat doubtful identity; they are of a pale delicate blue colour and of a pointed oval shape, moderately glossy, measuring respectively: ·87 by ·58; ·81 by ·6; ·85 by ·6.

Eggs received by Herr Nehrkorn, also from Sikhim and said to belong to this species, are described by him as being uniform pale blue. The measurement of these eggs is given as 21 × 25 mm., apparently a misprint.

Mr. Hartert, describing a number of eggs of this Redstart from Koko-nor, collected by Herr Tancre's men, states that they are of a delicate greenish blue, with more or less indistinct small rufous-brown spots near the larger end, in some almost invisible, in a few others forming a very distinct and obvious ring. Four of these specimens, acquired in the Crowley Bequest, are now in the Museum. They are much darker than the eggs in the Hume Collection, excessively glossy and measuring respectively: ·89 by ·6; ·84 by ·6; ·81 by ·61; ·85 by ·6.

Of a totally different type are the eggs of this Redstart taken by Mr. Osmaston in the Tons Valley in the Himalaya, and they agree perfectly with the eggs figured by Dr. Pleske as those of this species. They are pinkish white, clouded over with very pale brownish pink, chiefly at the broad end, and a few very minute specks of darker rufous are scattered over the shell. They are fairly glossy and measure respectively: .79 by .6; .79 by .54; .78 by .56.

Genus **DIPLOOTOCUS**, *Hartert*.

Diplootocus moussieri (*Olphe-Gall.*).

- Ruticilla moussieri*, *Salvin, Ibis*, 1859, p. 307; *Tristram, Ibis*, 1859, p. 416; *Dresser, Birds Eur.* ii. p. 301 (1873); *Bree, Birds Eur.* 2nd ed. ii. p. 88, pl. (1875).
Pinarochroa moussieri, *Sharpe, Cat. Birds B. M.* vii. p. 20 (1883); *Nehrk. Kat. Eiersamml.* p. 51 (1899).
Diplootocus moussieri, *Sharpe, Hand-l.* iv. p. 152 (1903).

The eggs of Moussier's Redstart are of a broad oval form, rather glossy, and of a white or very pale bluish white, sometimes sparingly marked with exceedingly minute rufous dots, easily overlooked unless the specimens are carefully examined. They measure from .72 to .78 in length, and from .56 to .57 in breadth.

Genus **RHYACORNIS**, *Blanf.*

Rhyacornis fuliginosa (*Vig.*).

- Xanthopygia fuliginosa*, *Sharpe, Cat. Birds B. M.* iv. p. 253 (1879); *Nehrk. Kat. Eiersamml.* p. 26 (1899).
Rhyacornis fuliginosus, *Oates, Fauna Brit. Ind., Birds*, ii. p. 98 (1890); *id. ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 65 (1890); *La Touche, Ibis*, 1899, p. 202.
Rhyacornis fuliginosa, *Sharpe, Hand-l.* iv. p. 152 (1903).

The eggs of the Plumbeous Redstart are regular or broad ovals, somewhat pointed at the smaller end: some exhibit a considerable amount of gloss, while others are entirely devoid of it. They

are of a pale greenish white, thickly spotted and mottled with more or less dull and dingy chestnut-brown and lavender, but little ground-colour being visible in some specimens; the markings often collect into a confluent cap at the broad end. They measure from .68 to .8 in length, and from .54 to .61 in breadth.

The eggs of the Red-spotted Blue-throat may be described as small forms of the bluish-green type of those of the Nightingale. The ground-colour is greenish blue, frequently with a dull olive tinge, and while some specimens are nearly uniformly of this colour, the majority are distinctly speckled with rufous. They measure from .65 to .8 in length, and from .55 to .57 in breadth.

Cyanecula cyanecula, *Sharpe, Hand-l.* iv. p. 153 (1903).

It would be impossible to separate the eggs of the White-spotted Blue-throat in the Collection from those of the Red-spotted form, though at a casual glance the former may seem a trifle more highly coloured.

Certainly, among them is a remarkable clutch from Valkenswaard (Seebohm Collection) which appears quite brilliant among its more sombre neighbours. These eggs have a bright greenish-blue ground, clouded, streaked, and blotched with rich rufous-brown of a soft and agreeable tint, the markings increasing gradually in number and density from one end to the other, and forming a conspicuous cap, in one instance at the smaller end.

In size the eggs of this species vary from .62 to .8 in length, and from .5 to .6 in breadth.

Aedon megarhyncha, *Sharpe, Hand-l.* iv. p. 153 (1903).

There is not much variation in the eggs of the Nightingale, though they may be separated into two types, having the same bluish-green ground, but differing in the amount and appearance of

the reddish-brown surface-colour. In one type the eggs are only faintly freckled, sometimes irregularly, but often at one end and occasionally at both ends, in the form of a cap. The other type has the colouring-matter so thickly distributed over the whole shell as to appear of a reddish- or olive-brown tint. Examples occur connecting these two types, but distinct varieties are apparently scarce. One from the Crowley Bequest, taken at Churt, in Surrey, is a pale olive-blue, almost without gloss, marked at the larger end with a few spots and one or two large blotches of brownish red. Another from the Salvin-Godman Collection, from Surrey, is of a peculiar elongated elliptical form, with a pale bluish-green ground, dotted and freckled with reddish brown, rather thickly towards the larger end, where there is a very distinct cap. These two are the only real abnormal specimens in a total of 115 eggs in the Museum cabinets.

Eggs of the Nightingale are usually very glossy. They measure from .75 to .9 in length, and from .57 to .65 in breadth.

The Museum Collection contains a fine series of the eggs of the Robin, which vary considerably in colour, and in shape, from the broad oval to the spheroidal, and are generally highly glossy. The ground is usually white or cream-coloured, sometimes tinged with pale pink; the markings are of various shades of brown or reddish brown, mingled with underlying lavender, and while in some eggs they are densely set over the whole shell in the shape of clouds, blotches, and spots, in others they are sparingly distributed in the form of small blotches and specks. In many specimens the markings are chiefly collected together at the broad end in the form of a cap or zone, often very handsome.

A set of eggs from Churt, Surrey, is pure white without any markings; others are very faintly or sparingly coloured, without the prevailing rufous-brown tint of the typical specimens. Two eggs from Bristol are very strikingly zoned with dark purple-grey, almost black, blotches, dominating the red-brown spots. In size the eggs vary from .7 to .9 in length, and from .56 to .65 in breadth.

Erithacus superbus, König.

Erithacus superbus, König, *J. f. O.* 1889, p. 183; *id. J. f. O.* 1890, p. 383, pl. viii. fig. 4; *Nehr. Kat. Eiersamml.* p. 39 (1899); *Sharpe, Hand-l.* iv. p. 154 (1903).

Compared with eggs of *E. rubecula*, those of the Teneriffe Robin seem to be less glossy and more highly coloured, the markings being of a somewhat richer and darker rufous-brown, with a more noticeable amount of underlying lavender-grey, especially at the larger end. There is no difference in size; the eggs in the Collection vary from .76 to .84 in length, and from .58 to .60 in breadth.

Genus **CALLIOPE**, *Gould*.**Calliope calliope** (*Pall.*).

Calliope camtschatkensis, *Tacz. J. f. O.* 1872, p. 433; 1873, taf. 1. fig. 13; *Dresser, Birds Eur.* ii. p. 341 (1875).

Erithacus calliope, *Seebohm, Cat. Birds B. M.* v. p. 305 (1881); *Tacz. Faune Orn. Sibér. Orient.* p. 335 (1891); *Nehr. Kat. Eiersamml.* p. 39 (1899).

Calliope calliope, *Sharpe, Hand-l.* iv. p. 155 (1903).

A pair of eggs of the Siberian Ruby-throated Robin in the Collection are of a regular oval shape and rather glossy. They are of a plain dull blue colour, though, according to Taczanowski, the eggs of this species are usually faintly marked at the broad end with rufous. In size they measure respectively: .82 by .61; and .9 by .63.

2. Lake Baikal, Siberia (*Dybowsky*). Crowley Bequest.

Genus **IANTHIA**, *Blyth*.**Ianthia rufilata** (*Hodgs.*).

Tarsiger rufilatus, *Sharpe, Cat. Birds B. M.* iv. p. 256 (1879); *Nehr. Kat. Eiersamml.* p. 27 (1899).

Ianthia rufilata, *Oates, Fauna Brit. Ind., Birds*, ii. p. 106 (1890); *id. ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 68 (1890); *Sharpe, Hand-l.* iv. p. 156 (1903).

Three eggs of the Red-flanked Wood-Robin are rather peculiar in shape; they are broad ovals, much pointed at the small end, and with a perceptible compression, almost amounting to a point, at the larger end. They vary in the amount of gloss on their surface, but are all of an extremely pale greenish-white, with a faint zone at the broad end composed of tiny specks of pale red-brown. The respective measurements are: .70 by .55; .70 by .56; and .70 by .57.

2. Kashmir, 2nd June (*W. E. B.*: Crowley Bequest.
Tristram Coll.).

Genus **LARVIVORA**, *Hodgs.***Larvivora cyanea** (*Pall.*).

Larvivora cyane, *Tacz. J. f. O.* 1872, p. 363; 1873, taf. 1. fig. 12; *id. Faune Orn. Sibér. Orient.* p. 338 (1891).

Erithacus cyaneus, *Seebohm, Cat. Birds B. M.* v. p. 303 (1881); *id. Birds Japan. Emp.* p. 53 (1890); *Nehr. Kat. Eiersamml.* p. 39 (1899).

Larvivora cyanea, *Sharpe, Hand-l.* iv. p. 157 (1903).

Two eggs of the Siberian Blue Robin in the Collection resemble

those of *L. brunnea*, but are rather longer. They are of a regular oval shape, slightly glossy, and of a plain blue colour. They measure respectively: .81 by .6; .78 by .59.

2. Hondo, Japan, 24th May.

Crowley Bequest.

Larvivora brunnea, *Hodgs.*

(Plate VII. fig. 4.)

Erithacus brunneus, *Seebohm, Cat. Birds B. M.* v. p. 302 (1881); *Nehrke, Kat. Eiersamml.* p. 39 (1899).

Larvivora brunnea, *Oates, Fauna Brit. Ind., Birds*, i. p. 182 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 127 (1889); *Osmaston, Journ. Bomb. Nat. Hist. Soc.* xi. p. 71 (1897), p. 468 (1898); *Sharpe, Hand-l.* iv. p. 157 (1903).

The eggs referred by Mr. Hume (*l. c.*) to the Indian Blue Chat now prove to be those of some other bird. Nehrke's description of the egg is incorrect, as he himself suggests.

Authentic eggs taken by Mr. Osmaston are of a pointed oval shape and moderately glossy. They are of a delicate spotless blue colour, and measure respectively: .73 by .57; .75 by .55; .77 by .56; .76 by .6.

Tons Valley, Himalayas, June.

B. B. Osmaston, Esq. [P.].

Genus **ADELURA**, *Bonap.*

Adelura cæruleocephala (*Vig.*).

(Plate VII. fig. 8.)

Ruticilla cæruleocephala, *Seebohm, Cat. Birds B. M.* v. p. 353 (1881).

Adelura cæruleocephala, *Oates, Fauna Brit. Ind., Birds*, ii. p. 108 (1890); *id. ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 69 (1890).

Adelura cæruleocephala, *Wardlaw Ramsay, Ibis*, 1880, p. 58; *Sharpe, Hand-l.* iv. p. 157 (1903).

The eggs of the Blue-headed Redstart in the Collection, taken by Colonel R. G. Wardlaw Ramsay in Afghanistan, are somewhat similar to the eggs of *Phœnicurus frontalis* taken by Mr. Osmaston, but the ground-colour is more creamy white than pink, and they are somewhat rounder in shape, as will be seen from the measurements of the three specimens, which are respectively: .7 by .54; .7 by .55; .69 by .55.

Mr. Hume, on the other hand, records the finding of an egg of this species on the 16th April in the Himalayas. He describes it as being of a uniform pale delicate blue colour, and measuring .83 by .62. There was probably some mistake made about this egg, as Mr. Hume himself appears to suggest (*l. c.*).

3 Afghanistan, 22nd May (*R. G.*

Seebohm Coll.

Wardlaw Ramsay).

Genus **NOTODELA**, *Less.***Notodela leucura** (*Hodgs.*).

Notodela leucura, *Sharpe, Cat. Birds B. M.* vii. p. 23 (1883); *Oates, Fauna Brit. Ind., Birds*, ii. p. 112 (1890); *id. ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 70 (1890); *Nehrke, Kat. Eiersamml.* p. 51 (1899); *Sharpe, Hand-l.* iv. p. 157 (1903).

The eggs of the White-tailed Blue Robin appear to be generally of a rather broad oval shape, pointed at the smaller end, but some of them incline towards a spheroidal form. They are not very glossy, and are of several shades of pinkish cream, or, as Mr. Hume remarks (*l. c.*), of a *café-au-lait* colour: though all are apparently spotless, an ordinary reading-glass discloses the existence, in one specimen very distinctly, of an obscure mottling or freckling of pale reddish brown on a light ground, so that we may assume that the darker eggs owe their extra colour to a dense mottling of a similar nature. In size the eggs measure from .85 to .92 in length, and from .65 to .70 in breadth.

Thamnobia fulicata (Linn.).

Thamnobia fulicata, *Legge, Birds Ceylon*, p. 440 (1879); *Sharpe, Cat. Birds B. M.* vii. p. 54 (1883); *Oates, Fauna Brit. Ind., Birds*, ii. p. 115 (1890); *id. ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 76 (1890); *Nehrk. Kat. Eiersamml.* p. 51 (1899); *Sharpe, Hand-l.* iv. p. 158 (1903).

A series of forty eggs of the Brown-backed Indian Robin in the Collection are principally of a regular oval form, but many are somewhat elongated and a few pointed. They have a fair amount of gloss. The ground-colour is white, often tinged with faint green or pink, and this is rather closely spotted, speckled, streaked, and mottled, with rich reddish or umber-brown and brownish yellow, with some underlying lavender. The markings are most dense at the larger end of the egg, where they often form an irregular zone or cap. Some eggs are very boldly and handsomely blotched with dark number or reddish brown at the larger end, but striking varieties appear to be rare. One example in the Collection is almost spherical in form, of a pale blue colour, and very sparingly dotted with yellowish. Specimens measure from .76 to .84 in length, and from .55 to .62 in breadth.

Genus **COPSYCHUS**, *Wagler*.**Copsychus saularis** (*Linn.*).

Copsychus saularis, *Layard, Ann. & Mag. N. H.* 2nd ser. xii. p. 263 (1853); *Legge, Birds Ceylon*, p. 433 (1879); *Sharpe, Cat. Birds B. M.* vii. p. 61 (1883); *Oates, Fauna Brit. Ind., Birds*, ii. p. 116 (1890); *id. ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 80 (1890); *Nehrke, Kat. Eiersamml.* p. 51 (1899); *Sharpe, Hand-l.* iv. p. 160 (1903).

The eggs of the Magpie-Robin are very variable in size, shape, and coloration. They are ordinarily of a regular oval form, some being short and blunt, others elongated and narrow, some almost globular. They have a considerable amount of gloss. The ground-colour is of some pale shade of green or greenish blue, and this is streaked, mottled, and blotched with different shades of reddish brown and yellowish brown, and some underlying markings of pale purple. In most cases the markings are dense all over the shell, but they are always especially so at the larger end, where they form an irregularly mottled cap.

Eggs measure from .78 to .95 in length, and from .6 to .75 in breadth.

Genus GERVAISIA, Bonap.

Gervaisia albispecularis (Eydl. & Gerv.).

Copsychus albospecularis typicus, *Milne-Edwards & Grandidier*, *Hist. Nat. Madag., Ois.* i. p. 363, pl. 303. fig. 7 (1879).

Gervaisia albospecularis, *E. Newton*, *Ibis*, 1863, p. 345; *Sharpe*, *Cat. Birds B. M.* vii. p. 66 (1883); *Nehrk. Kat. Eiersamml.* p. 51 (1899).

Gervaisia albispecularis, *Sharpe*, *Hand-l.* iv. p. 160 (1903).

There are only three eggs of the Madagascar Magpie-Robin in the Collection, and these cannot be separated from eggs of the

Western Madagascar form, *G. pica*, either by colour or size. They measure respectively: .88 by .63; .88 by .64; and .89 by .61.

2. Madagascar, 27th Oct. (*J. Caldwell*: Crowley Bequest.
Tristram Coll.).
1. Madagascar (*Tristram Coll.*). Crowley Bequest.

Gervaisia pica (Pelz.).

Copsychus albospecularis, var. *pica*, *Milne-Edwards & Grandidier, Hist. Nat. Madag., Ois.* i. p. 365, pl. 303. fig. 8 (1879).

Copsychus pica, *Cowan, Proc. R. Phys. Soc. Edin.* vii. p. 148 (1882).

Gervaisia pica, *Sharpe, Cat. Birds B. M.* vii. p. 67 (1883); *Nehrke, Kat. Eiersamml.* p. 52 (1899); *Sharpe, Hand-l.* iv. p. 160 (1903).

The eggs of the Western Madagascar Magpie-Robin, which show considerable variation, resemble those of *Copsychus saularis*, though the markings are certainly of a duller brown tint. The ground-colour varies from the palest greenish white to a greenish blue, and the markings are of various shades of yellowish brown and pale reddish brown. The eggs vary from .8 to .9 in length, and from .61 to .65 in breadth.

Genus *CITTOCINCLA*, *Scl.*

Cittocinclla macrura (Gm.).

Copsychus macrurus, *Layard, Ann. & Mag. Nat. Hist.* 2nd ser. xii. p. 264 (1853),

Cittocinclla macrura, *Legge, Birds Ceylon*, p. 437 (1879); *Oates, Fauna Brit. Ind., Birds*, ii. p. 118 (1890); *id. ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 86 (1890); *Sharpe, Hand-l.* iv. p. 161 (1903).

Cittocinclla tricolor, *Sharpe, Cat. Birds B. M.* vii. p. 85 (1883); *Nehrke, Kat. Eiersamml.* p. 52 (1899).

The eggs of the Indian Shama resemble those of *Copsychus saularis*, and, like them, are very varied both with regard to the colour of the ground and the distribution of the markings. One clutch of eggs in the Collection cannot, however, be matched by any of the eggs of the other species, the ground being a dead white, without any trace of green. On the whole, the eggs of the present species are rather smaller than Indian eggs of *C. saularis*, measuring from .77 to .92 in length, and from .61 to .65 in breadth.

Genus **COSSYPHA**, *Vig.***Cossypha caffra** (*Linn.*).

Cossyph acaffra, *Sharpe, ed. Layard's Birds S. Africa*, p. 224 (1875-84);
id. Cat. Birds B. M. vii. p. 39 (1883); *Nehrke. Kat. Eiersamml.*
 p. 51 (1899); *Stark & Selater, Fauna S. Africa, Birds*, ii. p. 213
 (1901); *Sharpe, Hand-l.* iv. p. 163 (1903).

The eggs of the Cape Chat-Thrush, or Cape "Robin," are of a long oval shape and moderately glossy. They are buff or cream-coloured, mottled and clouded with dull pale rufous, chiefly at the broad end, where a large cap is often formed by the markings. They measure from .9 to 1.0 in length, and from .62 to .7 in breadth.

Genus **PSEUDOCOSSYPHUS**, *Sharpe.***Pseudocossyphus sharpei** (*Gray*).

Cossypha sharpei, *Milne-Edwards & Grandidier, Hist. Nat. Madag., Ois.* i. p. 369 (1879); *Cowan, Proc. R. Phys. Soc. Edin.* vii. p. 148 (1882).

Pseudocossyphus sharpii, *Sharpe, Cat. Birds B. M.* vii. p. 22 (1883).

Pseudocossyphus sharpei, *Sharpe, Hand-l.* iv. p. 166 (1903).

As with the eggs of Moussier's Redstart, already described (p. 142),

some of those of Sharpe's Chat-Thrush are faintly marked with minute dots which might easily escape observation. These are of a reddish-lilac tint, the ground-colour of the eggs being a pale blue, slightly tinged with greenish. Examples measure from .81 to .89 in length, and from .63 to .70 in breadth.

Genus **ERYTHROPYGIA**, *A. Smith.*

Erythropygia coryphæus (*Less.*).

(Plate VII. fig. 17.)

Aëdon coryphæa, *Sharpe, ed. Layard's Birds S. Africa*, p. 251 (1875-84).
Erythropygia coryphæus, *Sharpe, Cat. Birds B. M.* vii. p. 73 (1883);
Nehr. Kat. Eiersamml. p. 52 (1899); *Stark & Slater, Fauna S. Africa, Birds*, ii. p. 229 (1901); *Sharpe, Hand-l.* iv. p. 167 (1903).

The eggs of the Cape Ground-Robin are for the most part of a blunt oval form and fairly glossy. The ground-colour is a bright greenish blue, and this is spotted, mottled, and blotched, generally rather thickly, and more densely, at the larger end of the egg than elsewhere, with rich reddish brown and underlying pale purple. On some eggs the markings are smaller and less numerous on the smaller half of the shell. They range in size from .70 to .82 in length, and from .58 to .60 in breadth.

Erythropygia leucophrys (*Vieill.*).

Aëdon leucophrys, *Sharpe, ed. Layard's Birds S. Africa*, p. 252 (1875-84).
Erythropygia leucophrys, *Sharpe, Cat. Birds B. M.* vii. p. 74 (1883); *id. Ibis*, 1897, p. 504; *Nehr. Kat. Eiersamml.* p. 52 (1899); *Stark & Slater, Fauna S. Africa, Birds*, ii. p. 225 (1901); *Sharpe, Hand-l.* iv. p. 167 (1903).

Two eggs of the White-browed Ground-Robin in the Collection are of a long oval shape and are slightly glossy. They are cream-coloured, rather densely and finely spotted and mottled all over with light umber-brown and lavender-grey. They measure respectively: .88 by .61; .91 by .61.

2. Zululand, S. Africa.

Messrs. R. B. & J. D. S. Woodward [C.]

Erythropygia munda (Cab.).

Aëdon leucophrys, *apud Andersson, Birds Dam.-land*, p. 92 (1872).
Erythropygia munda, *Sharpe, Cat. Birds B. M.* vii. p. 76 (1883); *Stark & Selater, Fauna S. Africa, Birds*, ii. p. 227 (1901); *Sharpe, Hand-l.* iv. p. 167 (1903).

There are only two eggs of the Damara Ground-Robin in the Collection; these are of a broad oval shape and dull in texture. They are cream-coloured, coarsely but handsomely spotted and mottled all over with lilac-brown and lavender-grey. They measure respectively: .82 by .61, and .81 by .62.

2. Ondonga, Ovampo-land (*C. J. Andersson: Tristram Coll.*). Crowley Bequest.

Erythropygia pæna, A. Smith.

Aëdon pæna, *Andersson, Birds Dam.-land*, p. 92 (1872).

Erythropygia pæna, *Sharpe, Cat. Birds B. M.* vii. p. 76 (1883).
Erythropygia pæna, *Stark & Selater, Fauna S. Africa, Birds*, ii. p. 223 (1901); *Sharpe, Hand-l.* iv. p. 167 (1903).

The two eggs of Smith's Ground-Robin in the Collection are of a broad oval shape and moderately glossy. They are of a white colour, speckled and spotted, most thickly at the larger end, with lilac-brown and lavender-grey. They measure respectively: .77 by .59, and .76 by .58.

2. Damara-land, 4th Jan. (*C. J. Andersson: Tristram Coll.*). Crowley Bequest.

Genus PRATINCOLA, Koch.**Pratincola rubetra (Linn.).**

Saxicola rubetra, *Thien. Fortpflanz. ges. Vög.* p. 237, tab. xxiii. fig. 8, a, b, c (1845-54); *Hewitson, Eggs of Brit. Birds*, i. p. 108, pl. xxx. fig. ii (1856).
Pratincola rubetra, *Baedeker, Eier Eur. Vög.* tab. 27. fig. 13 (1855-63); *Dresser, Birds Eur.* ii. p. 255 (1873); *Sharpe, Cat. Birds B. M.* iv. p. 179 (1879); *Seebohm, Brit. Birds*, i. p. 312, pl. 9 (1883); *id. Eggs of Brit. Birds*, p. 190, pl. 51. figs. 18, 19 (1896); *Sharpe, Hand-l.* iv. p. 171 (1903).

Typical eggs of the Whinchat are glossy and of a pointed oval form, though varieties occur which are broader, and some in which there is a decided point at the broad end. The ground-colour is of a greenish blue, sometimes with hardly a tinge of green in the blue; occasionally quite plain, they are most frequently freckled and dotted with light rufous or pale brown. On some eggs the markings are very few and inconspicuous, on others they are rather thickly disposed, especially on the broad end, where they form an

indistinct zone or cap. In size they vary from .7 to .81 in length, and from .55 to .6 in breadth.

Pratincola rubicola (Linn.).

Saxicola rubicola, *Thien. Fortpflanz. ges. Vög.* p. 236, tab. xxiii. fig. 7, *a, b, c* (1845-54); *Hewitson, Eggs of Brit. Birds*, i. p. 107, pl. xxx. fig. i (1856).

Pratincola rubicola, *Baedeker, Eier Eur. Vög.* tab. 27. fig. 12 (1855-63); *Salvin, Ibis*, 1859, p. 307; *Dresser, Birds Eur.* ii. p. 263, part. (1873); *Sharpe, Cat. Birds B. M.* iv. p. 185 (1879); *Seebohm, Brit. Birds*, i. p. 317 (1883); *id. Eggs of Brit. Birds*, p. 191, pl. 51. fig. 16 (1896); *Sharpe, Hand-l.* iv. p. 171 (1903).

The eggs of the Stonechat are of the same type as those of the Whinchat, but the ground-colour is of a paler greenish blue, and the spotting is frequently very dense. The Collection contains no plain eggs; all the examples are marked in varying degrees with pale chestnut. In some there are merely a few faint specks and smears; in the majority the markings consist of specks, spots, and small blotches, very thickly disposed over the broader end, nearly always in the form of a conspicuous cap or zone. They measure from .65 to .75 in length, and from .55 to .6 in breadth.

Pratincola indica, *Tacz. Faune Orn. Sibér. Orient.* i. p. 355 (1891).

The eggs of the Asiatic Stonechat resemble those of *P. rubicola*, and are subject to the same variations. They are, however, rather smaller, measuring from .6 to .75 in length, and from .48 to .58 in breadth.

Eggs taken in Afghanistan show but the faintest trace of the ground-colour. In one clutch they are densely freckled with brownish pink; in another with very pale yellowish brown.

In two clutches from Japan the ground-colour is of a bright but pale greenish-blue, and one of them is so faintly zoned with the palest brownish-red, that the eggs appear plain, until closely examined.

Pratincola torquata (Linn.).

Pratincola torquata, Sharpe, ed. *Layard's Birds S. Africa*, p. 236 (1875-84); *id. Cat. Birds B. M.* iv. p. 190 (1879); *Nehr. Kat. Eiersaml.* p. 25 (1899); *Stark & Selater, Fauna S. Africa, Birds*, ii. p. 190 (1901); *Sharpe, Hand-l.* iv. p. 172 (1903).

The eggs of the South-African Stonechat are not separable from those of *P. rubicola*. They are of a pale dull greenish-blue colour, speckled and clouded with pale chestnut, the markings being densest at the large end and forming an irregular zone or indistinct cap. Specimens measure from .7 to .8 in length, and from .53 to .61 in breadth.

The eggs of the Common Indian Pied Bush-Chat are mostly of a broad oval form, more or less pointed, and fairly glossy. The

ground-colour varies from a pale greenish or bluish-white to a rather darker shade of the same colour, and this is somewhat coarsely speckled, streaked, and often blotched with bright chestnut and lilac, the markings of the latter colour being inconspicuous and underlying those of the former. The markings are sparse in some specimens, dense in others, and they are generally more thickly set about the larger end, where they form an irregular cap or zone, sometimes a rich and handsome one. Examples vary from ·61 to ·76 in length, and from ·5 to ·58 in breadth.

Genus **OREICOLA**, Bonap.**Oreicola ferrea** (Hodgs.).

(Plate VII. figs. 18 & 19.)

Oreicola ferrea, Sharpe, *Cat. Birds B. M.* iv. p. 266 (1879); *Oates, Fauna Brit. Ind., Birds*, ii. p. 66 (1890); *id. ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 50 (1890); *La Touche, Ibis*, 1899, p. 201; *Nehrk. Kat. Eiersamml.* p. 27 (1899); *Sharpe, Hand-l.* iv. p. 173 (1903).

The eggs of the Dark-grey Bush-Chat are of two very distinct types. Those taken on the Himalayas resemble the eggs of *Pratincola maura*, being of various shades of pale bluish green, speckled, more or less densely, with chestnut and pale rufous. Eggs taken in China, of which there is a considerable series in the Collection, are of a plain, decidedly greenish-blue colour, resembling those of *Tharrhaleus modularis*. They measure from .65 to .77 in length, and from .53 to .6 in breadth.

<i>Tristram Coll.</i>). | Crowley Bequest. |

Poliocichla sinuata (*Sundev.*).

(Plate VII. fig. 9.)

Myrmecocichla sinuata, *Seebohm, Cat. Birds B. M. v. p. 359* (1881); *Nehrke, Kat. Eiersamml. p. 40* (1899).

Saxicola sinuata, *Sharpe, ed. Layard's Birds S. Africa*, p. 236 (1875-84).

Emarginata sinuata, *Stark & Sclater, Fauna S. Africa, Birds, ii. p. 203* (1901).

Poliocichla sinuata, *Sharpe, Hand-l. iv. p. 175* (1903).

In outline the eggs of the Russet Sickle-winged Chat-Robin vary from a narrow to a broad oval. They are of the same glossy blue colour as those of *P. cinerea*, but rather smaller. Some are perfectly plain, others are indistinctly freckled with very pale rufous at the broad end. Examples measure from .7 to .83 in length, and from .55 to .62 in breadth.

Genus **SAXICOLA**, *Bechst.***Saxicola familiaris**, *Steph.*

(Plate VII. fig. 7.)

Saxicola galtoni, *Sharpe, ed. Layard's Birds S. Africa*, p. 234 (1875-84); *Seebohm, Cat. Birds B. M. v. p. 390* (1881); *Nehrke, Kat. Eiersamml. p. 41* (1899).

Saxicola familiaris, *Stark & Sclater, Fauna S. Africa, Birds, ii. p. 201* (1899); *Sharpe, Hand-l. iv. p. 175* (1903).

The eggs of the Familiar Chat have a rather bright blue ground-colour, with a very variable amount of light rufous and reddish-brown markings. One clutch of three eggs is absolutely spotless, other specimens are faintly dotted with rust-colour, mostly at the larger end, while two are quite thickly streaked and spotted. They range from .73 to .85 in length, and from .58 to .62 in breadth.

Saxicola œnanthe (*Linn.*).

Saxicola œnanthe, *Thien. Fortpflanz. ges. Vög. tab. xxiii. fig. 2, a-c* (1845-54); *Baedeker, Eier Eur. Vög. tab. 27. fig. 14* (1855-63); *Hewitson, Eggs of Brit. Birds, i. p. 110, pl. xxx. fig. iii* (1856); *Dresser, Birds Eur. ii. p. 187* (1874); *Seebohm & Harvie-Brown, Ibis, 1876, p. 215*; *Seebohm, Cat. Birds B. M. v. p. 391* (1881); *id. Brit. Birds, i. p. 298, pl. 9* (1883); *id. Eggs of Brit. Birds, p. 188*,

pl. 51. fig. 9 (1896); *Nehrke. Kat. Eiersamml.* p. 41 (1899); *Sharpe, Hand-l.* iv. p. 175 (1903).

The eggs of the Wheatear are of a pointed oval form and are usually very glossy. They are of a pale greenish-blue colour, generally spotless, but occasionally marked with a few brown or purple specks, chiefly on the larger end. A clutch of six eggs from the Seebohm Collection, taken in Holland, are, comparatively speaking, quite heavily spotted with pale and dark purple-red. The eggs measure from .72 to .98 in length, and from .56 to .65 in breadth.

Saxicola stapazina (*Linn.*).

Saxicola stapazina, *Salvad. Ibis*, 1904, p. 75.

Saxicola aurita, *Thien. Fortpflanz. ges. Vög.* tab. xxiii. fig. 5, *a-c*, part. (1845-54); *Bree, Birds Eur.* 2nd ed. p. 101, pl., part. (1875); *Seebohm, Cat. Birds B. M.* v. p. 394, part. (1881); *Nehrke. Kat. Eiersamm.* p. 41 (1899).

Saxicola albicollis, *Sharpe, Hand-l.* iv. p. 176 (1903).

Saxicola amphileuca, *Sharpe, Hand-l.* iv. p. 176 (1903).

A series of the eggs of the Eastern Black-eared Chat in the Collection, chiefly from Greece and Palestine, do not differ much *inter se*. The ground-colour is of a bright greenish-blue of a pleasing tint, and the markings, which are usually collected together towards the larger end in the form of a more or less perfect zone, consist of spots of various shades of reddish- and lilac-brown. In some cases the markings are very faint, but there are no actually spotless forms in the series.

Size from .71 to .85 in length, and from .55 to .61 in breadth.

Saxicola caterinæ, *Whitaker*.

Saxicola aurita (*nec Temm.*), *Salvin, Ibis*, 1859, p. 307; *Saunders, Ibis*, 1871, p. 211; *Seebohm, Cat. Birds B. M.* v. p. 394, part. (1881).

Saxicola amphileuca (*nec H. & E.*), *Tristram, Ibis*, 1867, p. 96

Saxicola caterinæ, *Whitaker, Ibis*, 1898, p. 625; *id. Bull. B. O. C.* xii. p. 78 (1902).

As in the case of the eggs of the allied species *S. melanoleuca*

and *S. occidentalis*, there seems to be a remarkable, though slight, difference between the eggs of the Western Black-eared Chat and those of the preceding species, *S. stapazina*; and this coincidence appears to indicate some climatic influence causing the colouring-matter to be brighter in one region than in the other, for it is the Eastern race or form of each species that lays the more highly-coloured eggs in both cases. It is unnecessary, perhaps, to say more in describing the eggs of the Western race, than that they resemble those of *S. stapazina* in form and size, but have a duller and slightly darker ground and less conspicuous markings.

Saxicola isabellina, *Cretzschm.*

Saxicola isabellina, *Tristram, Ibis*, 1867, p. 94; *Heugl. Orn. N.O.-Afr.* i. p. 344, taf. xliii. fig. 12 (1869); *Dresser, Birds Eur.* ii. p. 199 (1874); *Bree, Birds Eur.* 2nd ed. ii. p. 110, pl. (1875); *Seeböhm, Cat. Birds B. M.* v. p. 399 (1881); *id. Eggs of Brit. Birds*, p. 189, pl. 51. fig. 13 (1896); *Oates, Fauna Brit. Ind., Birds*, ii. p. 77 (1890); *Ratray, Journ. Bomb. Nat. Hist. Soc.* xii. p. 339 (1899); *Sharpe, Hand-l.* iv. p. 176 (1903).

Saxicola saltatrix, *Tacz. J. f. O.* 1873, p. 117, taf. ii. fig. 29.

Of the three sets of eggs of the Isabelline Chat in the Collection two are exactly like ordinary eggs of *S. œnanthe*: the third set has the ground-colour of a considerably darker tint of greenish blue, and the eggs are more or less faintly spotted with purple. In size they vary from .80 to .90 in length, and from .64 to .68 in breadth.

Saxicola picata, Blyth.

Saxicola picata, Seebohm, *Cat. Birds B. M.* v. p. 367 (1881); *Barnes, Stray Feath.* ix. p. 217 (1881); *Oates, Fauna Brit. Ind. Birds*, ii. p. 71 (1890); *id. ed. Hume, Nests & Eggs Ind. Birds*, ii. p. 52 (1890); *Dresser, Birds Eur.* ix. (*Suppl.*) p. 29 (1895); *Sharpe, Hand-l.* iv. p. 177 (1903).

The eggs of the Pied Chat are of a pointed oval shape and moderately glossy. They are of a very pale blue colour, thinly speckled with pale rufous, the markings being more numerous at the larger end, forming an incomplete zone. Three examples measure respectively : .84 by .6; .82 by .6; .79 by .61.

Saxicola leucura (*Gm.*).

Saxicola leucura, *Baedecker*, *Eier Eur. Vög.* tab. 27. fig. 18 (1855-63); *Dresser*, *Birds Eur.* ii. p. 247 (1873); *Bree*, *Birds Eur.* 2nd ed. ii. p. 89, pl. (1875); *Seeböhm*, *Cat. Birds B. M.* v. p. 375 (1881); *Sharpe*, *Hand-l.* iv. p. 179 (1903).

Dromolæa leucura, *Saunders*, *Ibis*, 1871, p. 211.

Eggs of the Black Chat are of a blunt oval shape and moderately glossy. The ground-colour varies from bluish white to very pale greenish blue and is lightly speckled with lilac-red and underlying lavender or violet spots, which are chiefly confined to the broad end

of the egg, where they form a delicate and beautiful wreath. Specimens measure from .86 to .97 in length, and from .67 to .7 in breadth.

Saxicola deserti, Temm.

Saxicola deserti, Dresser, *Birds Eur.* ii. p. 215, part. (1874); Seebohm, *Cat. Birds B. M.* v. p. 383 (1881); *id. Brit. Birds*, i. p. 304, pl. 9 (1883); *id. Eggs of Brit. Birds*, p. 189, pl. 51, fig. 14 (1896); *Pleske in Prjev. Reisen, Vög.* pl. v. fig. 3 (1889-94); *Nehrk. Kat. Eiersamml.* p. 41 (1899); *Sharpe, Hand-l.* iv. p. 179 (1903).

Two eggs of the Desert-Chat in the Collection are of a regular oval form, delicately pale blue in tint, with a few light chestnut spots and small blotches. In one egg these are so few and faint as to be almost invisible, while the other egg has an imperfect but quite conspicuous zone at the larger end. In size they measure respectively .78 by .6 and .79 by .59.

- | | |
|----------------------|------------------|
| 2. Kuldja, 3rd June. | Crowley Bequest. |
|----------------------|------------------|

Saxicola melanoleuca (Güld.).

Saxicola eurymelæna, Tristram, *Ibis*, 1867, p. 95; *Sharpe, Hand-l.* iv. p. 179 (1903).

Saxicola melanoleuca, Dresser, *Birds Eur.* ii. p. 211 (1874); Seebohm, *Cat. Birds B. M.* v. p. 385 (1881); *Nehrk. Kat. Eiersamml.* p. 41 (1899); *Sharpe, Hand-l.* iv. p. 179 (1903).

Not much variation can be observed among the eggs of the Black-throated Chat in the Collection. All have the same beautiful pale blue ground-colour, sparingly dotted and blotched with pale chestnut, and nearly all have a more or less dense zone round the larger end. A few are very faintly marked, appearing at first sight to be quite spotless. In size they range from .68 to .8 in length, and from .57 to .64 in breadth.

***Saxicola occidentalis*, Salvad.**

Saxicola stapazina (*nec Linn.*), *Salvin, Ibis*, 1859, p. 307; *Saunders, Ibis*, 1871, p. 211; *Bree, Birds Eur.* 2nd ed. ii. p. 96, pl. (1875); *Seebohm, Cat. Birds B. M.* v. p. 387 (1881); *id. Brit. Birds*, i. p. 307, pl. 9 (1883); *id. Eggs of Brit. Birds*, p. 190, pl. 51 fig. 15 (1896).

Saxicola rufa, *Dresser, Birds Eur.* ii. p. 297 (1874); *Sharpe, Hand-l.* iv. p. 179 (1903).

Saxicola occidentalis, *Salvad. Ann. Mus. Civ. Genov.* (2) iii. p. 116 (1886); *id. Ibis*, 1904, pp. 77, 78.

Though very similar to those of the preceding species, *S. eury-melæna*, the eggs of the Russet Chat are a shade darker in their ground-colour, which is not of such a pale delicate tint, and the markings are less conspicuous in consequence. As with *S. eury-melæna*, there are some almost spotless eggs in the series. In size they vary from .72 to .8 in length, and from .55 to .61 in breadth.

***Saxicola finschi*, Heugl.**

Saxicola libanotica, *Tristram, Ibis*, 1867, pp. 91, 94.

Saxicola erythraea, *Dresser, Birds Eur.* ii. p. 219 (1874).

Saxicola finschii, *Seebohm, Cat. Birds B. M.* v. p. 388 (1881); *Nehrk. Kat. Eiersamml.* p. 41 (1899).

Saxicola finschi, *Sharpe, Hand-l.* iv. p. 180 (1903).

Considerable likeness exists between the eggs of the Euphrates Pied Chat and those of *S. leucura* already described: this similarity is noticed by Nehrkorn (*l. c.*). There is only a small series of each in the Collection, but, judging from the material available, it would appear that the eggs of the present species are of a slightly paler ground-colour and do not display their pale chestnut markings to

such advantage as those of *S. leucura*. They measure from .84 to .95 in length, and from .62 to .66 in breadth.

Genus **CAMPICOLA**, *Swains.*

Campicola pileata (*Gm.*).

(Plate VII. fig. 10.)

Saxicola pileata, *Sharpe, ed. Layard's Birds S. Africa*, p. 238 (1875-84); *Seebohm, Cat. Birds B. M. v.* p. 397 (1881); *Nehrk. Kat. Eiersamml.* p. 41 (1899); *Stark & Selater, Fauna S. Africa, Birds*, ii. p. 196 (1901).

Campicola pileata, *Sharpe, Hand-l.* iv. p. 180 (1903).

Eggs of the Black-hooded Chat are of a pale greenish-white colour, without markings of any sort. They are large compared with the size of the bird, of a broad oval form, pointed at the small end, and rather glossy. Size from .87 to .98 in length by from .67 to .73 in breadth. These measurements are considerably less than those given by Layard and by Stark (*l. c.*), viz. 1.00 by .75; but the Museum series contains one or two unusually small specimens.

Genus **CATHARUS**, *Bonap.*

Catharus melpomene (*Cab.*).

Catharus melpomene, *Scl. P. Z. S.* 1859, p. 362; *Scl. & Salv. Ibis*, 1860, p. 29; *Salv. & Godman, Biol. Centr.-Amer., Aves*, i. p. 2 (1879); *Seebohm, Cat. Birds B. M. v.* p. 288 (1881); *Nehrk. Kat. Eiersamml.* p. 39 (1899); *Sharpe, Hand-l.* iv. p. 180 (1903).

Eggs of the Common Central-American Thrush-Robin vary in shape from a short to a long oval, and in colour from greenish-grey to bluish-green, and are marked with specks, clouds, and very small blotches of pale rufous and underlying lilac and purple. In some cases the markings are somewhat evenly and thickly distributed, concealing much of the ground-colour, especially towards the broad end; in others the blotches are larger and fewer in number.

They measure from .91 to 1.00 in length, and from .65 to .73 in breadth.

The eggs of the Colombian Thrush-Robin appear to be of a regular oval form, but the specimen from the Crowley Collection is much elongated. They are of a pale bluish-white colour, spotted and blotched with reddish-brown and underlying lilac. Measurements vary from .95 to 1.08 in length, and from .70 to .72 in breadth.

Aëdon galactodes, Salvin, *Ibis*, 1859, p. 308.
Agrobates galactodes, Sharpe, *Hand-l.* iv. p. 185 (1903).

The eggs of the Rufous Warbler vary in shape from a broad to a narrow oval, and a few specimens approach the elliptical. They have a considerable amount of gloss. The ground is in some cases pale bluish white, in others pale grey, and the markings consist of

specks, spots, streaks, and confluent blotches of umber-brown and lavender-grey. In some examples they consist entirely of fine spots: in others, the majority, of coarse streaks and blotches which are often confluent on the broader half and form an irregular cap. Examples measure from .82 to .95 in length, and from .6 to .7 in breadth.

Agrobates familiaris (Ménétr.).

(Plate IX. figs. 2 & 3.)

Aëdon familiaris, Dresser, *Birds Eur.* ii. p. 553 (1874); Oates, *Fauna Brit. Ind., Birds*, i. p. 351 (1889); Sharpe, *Ibis*, 1891, p. 107.
Sylvia familiaris, Seeböhm, *Cat. Birds B. M.* v. p. 36 (1881).
Agrobates familiaris, Sharpe, *Haud-l.* iv. p. 185 (1903).

The eggs of the Grey-backed Warbler are not, as a rule, separable from those of the Rufous Warbler.

Five eggs, however, forming a clutch taken at Shiraz, are pale blue, delicately marked with pale brown and underlying lavender. They differ very conspicuously from all the other eggs of the Grey-backed and Rufous Warblers in the Collection. Specimens measure from .75 to .9 in length, and from .59 to .65 in breadth.

Genus **LOCUSTELLA**, *Kaup*.

Locustella fluviatilis (*Wolf*).

Sylvia fluviatilis, *Thien. Fortpflanz. ges. Vög.* p. 203, tab. xxi. fig. 6, *a-c*, tab. ic. fig. 11, *a, b* (1845-54).

Aëdonops fluviatilis, *Baedeker, Eier Eur. Vög.* tab. 19. fig. 19 (1855-63).

Locustella fluviatilis, *Dresser, Birds Eur.* ii. p. 621 (1874); *Bree, Birds Eur.* 2nd ed. iii. p. 34, pl. (1875); *Seeböhm, Cat. Birds B. M. v.* p. 110 (1881); *Sharpe, Hand-l.* iv. p. 185 (1903).

The eggs of the River-Warbler in the Collection are almost elliptical in form and very glossy. One example is white, thickly speckled and spotted with rather bright rufous and underlying lavender. The others are of a greyish-white colour, thickly sprinkled with specks of greyish brown and dull lavender. In all the specimens the markings are very evenly distributed over the shell. They measure respectively: .79 by .58; .74 by .6; .77 by .57; .8 by .58.

Locustella luscinioides (*Savi*).

Sylvia luscinioides, *Thien. Fortpflanz. ges. Vög.* p. 201, tab. xxi. fig. 12, tab. ic. fig. 12, *a-c* (1845-54).

Lusciniola savii, *Baedeker, Eier Eur. Vög.* tab. 19. fig. 20 (1855-63).

Salicaria luscinioides, *Hewitson, Eggs of Brit. Birds*, i. p. 115, pl. xxxi. fig. ii (1856).

Calamodyta luscinioides, *Salvin, Ibis*, 1859, p. 304.

Lusciniopsis savii, *Tristram, Ibis*, 1859, p. 418.

Locustella luscinioides, *Dresser, Birds Eur.* ii. p. 627 (1875); *Seeböhm, Cat. Birds B. M. v.* p. 12 (1881); *id. Brit. Birds*, i. p. 346, pl. 10 (1883); *id. Eggs of Brit. Birds*, p. 194, pl. 52, fig. 4 (1896); *Irby, Orn. Str. Gibr.* 2nd ed. p. 59 (1895); *Sharpe, Hand-l.* iv. p. 185 (1903).

The eggs of Savi's Warbler are of a broad oval form and possess a considerable amount of gloss. They are dull white or very pale greyish white, often with a decided pinkish tinge, and they are thickly speckled all over with ashy brown, dull rufous, and underlying lilac or lavender. In some specimens the markings form a

cap at the broad end, in others an ill-defined zone. They measure from .73 to .8 in length, and from .53 to .6 in breadth.

Locustella nævia (Bodd.).

(Plate VIII. fig. 21.)

Sylvia locustella, *Thien. Fortpflanz. ges. Vög.* p. 200, tab. xxi. fig. 8, *a-c* (1845-54).

Locustella nævia, *Baedecker, Eier Eur. Vög.* tab. 19. fig. 21 (1855-63); *Dresser, Birds Eur.* ii. p. 611 (1874); *Sharpe, Hand-l.* iv. p. 186 (1903).

Salicaria locustella, *Hewitson, Eggs of Brit. Birds*, i. p. 112, pl. xxxi. fig. i (1856).

Locustella locustella, *Seebohm, Cat. Birds B. M.* v. p. 115 (1881); *id. Brit. Birds*, i. p. 340, pl. 10 (1883); *id. Eggs of Brit. Birds*, p. 194, pl. 52. fig. 1 (1896).

The eggs of the Grasshopper-Warbler are of a broad pointed oval form and very glossy. The ground-colour is white or pinkish white, very thickly speckled with minute dots of rufous or chestnut-brown. The markings sometimes form a very broad and dense zone round the larger end and sometimes an ill-defined cap, but, as a rule, they are evenly spread over the entire shell. In a few specimens the markings are comparatively large and blotchy. When carefully examined, most of the specimens will be found to be sprinkled with pale underlying grey, and a few examples have some dark hair-lines at the broad end. The eggs measure from .65 to .75 in length, and from .5 to .55 in breadth.

Acrocephalus phragmitis (Bechst.).

Sylvia phragmitis, *Thien. Fortpflanz. ges. Vög.* p. 195, tab. xxi. fig. 10, *a-c* (1845-54).

Calamodyta phragmitis, *Baedeker, Eier Eur. Vög.* tab. 19. fig. 17 (1855-63); *Seebohm & Harvie-Brown, Ibis*, 1876, p. 218.

Salicaria phragmitis, *Hewitson, Eggs of Brit. Birds*, i. p. 117, pl. xxxi. fig. iii (1856).

Acrocephalus schœnobæus, *Dresser, Birds Eur.* ii. p. 597 (1876).

Acrocephalus phragmitis, *Seebohm, Cat. Birds B. M.* v. p. 91 (1881); *id. Brit. Birds*, i. p. 352 (1883); *id. Eggs of Brit. Birds*, p. 195, pl. 52. fig. 5 (1896); *Sharpe, Hand-l.* iv. p. 187 (1903).

The eggs of the Sedge-Warbler are mostly of a broad oval form and possess a considerable amount of gloss. They are cream-colour, stone-colour, or yellowish-buff, for the most part so densely mottled with various shades of brown that little or none of the ground-colour is distinctly visible. In some specimens, however, the markings are better defined, being blotchy or streaky, and a certain amount of the ground-colour is then clearly visible. Many eggs are, in addition, marked with some black dots and hair-lines. They measure from .65 to .7 in length, and from .5 to .55 in breadth.

Acrocephalus turdoides (Meyer).

Sylvia turdoides, *Thien. Fortpflanz. ges. Vög.* p. 189, tab. xxi. fig. 5, *a, b, c* (1845-54).

Calamoherpe turdoides, *Baedeker, Eier Eur. Vög.* tab. 19. fig. 10 (1855-

- 63); *Salvin, Ibis*, 1859, p. 305; *Tristram, Ibis*, 1859, p. 418; *Saunders, Ibis*, 1871, p. 215.
Salicaria arundinacea, *Hewitson, Eggs of Brit. Birds*, i. p. 122, pl. xxxii. figs. iii & iv (1856).
Acrocephalus arundinaceus, *Dresser, Birds Eur.* ii. p. 579 (1878).
Acrocephalus turdoides, *Seebohm, Cat. Birds B. M.* v. p. 95 (1881); *id. Brit. Birds*, i. p. 361, pl. 10 (1883); *id. Eggs of Brit. Birds*, i. p. 196, pl. 52. fig. 7 (1896); *Sharpe, Hand-l.* iv. p. 187 (1903).

The eggs of the European Great Reed-Warbler are of a blunt oval shape and moderately glossy. They are of different shades of pale blue or bluish green, boldly blotched and spotted with olive-brown, deep umber-brown, approaching black, and lavender. The markings are frequently confluent at the broad end, and form an irregular cap.

Two examples from Germany are of remarkable coloration, the pointed half of the egg being greyish white, followed by a belt of light olive occupying the third quarter. The remainder of the egg is covered by a cap of dark olive-brown spotted with umber-brown.

Specimens measure from .75 to 1 in length, and from .6 to .7 in breadth.

***Acrocephalus palustris* (Bechst.).**

Sylvia palustris, *Thien. Fortpflanz. ges. Vög.* p. 191, tab. xxi. fig. 7, a, b (1845-54).

Calamoherpe palustris, *Baedeker, Eier Eur. Vög.* tab. 19. fig. 16 (1855-63); *Saunders, Ibis*, 1871, p. 215.

Acrocephalus palustris, *Bree, Birds Eur.* 2nd ed. iii. p. 1, pl. (1875); *Dresser, Birds Eur.* ii. p. 573 (1876); *Seeböhm, Cat. Birds B. M.* v. p. 101 (1881); *id. Brit. Birds*, i. p. 375, pl. 10 (1883); *id. Eggs of Brit. Birds*, p. 198, pl. 52. fig. 9 (1896); *Sharpe, Hand-l.* iv. p. 188 (1902).

The eggs of the Marsh-Warbler are almost miniatures of those of *A. turdoides*, and the only difference between them, apart from size, appears to be that in the eggs of the present species the underlying lavender markings are more prominent and the shell-markings less dense. The eggs measure from .63 to .8 in length, and from .51 to .58 in breadth.

Acrocephalus streperus (Vieill.).

(Plate VIII. fig. 20.)

Sylvia arundinacea, *Thien. Fortpflanz. ges. Vög.* p. 191, tab. xxi. fig. 7, *d, e, f* (1845-54).

Calamoherpe arundinacea, *Baedeker, Eier Eur. Vög.* tab. 19. fig. 11 (1855-63); *Saunders, Ibis*, 1871, p. 215.

Calamoherpe pinetorum, *Baedeker, tom. cit.* tab. 19. fig. 12.

Calamoherpe hydrophilos, *Baedeker, tom. cit.* tab. 19. fig. 13.

Calamoherpe arbustorum, *Baedeker, tom. cit.* tab. 19. fig. 14.

Salicaria strepera, *Hewitson, Eggs of Brit. Birds*, i. p. 119, pl. xxxii. figs. i, ii (1856).

Acrocephalus streperus, *Dresser, Birds Eur.* ii. p. 567 (1877); *Seebohm, Cat. Birds B. M.* v. p. 102 (1881); *Sharpe, Hand-l.* iv. p. 188 (1903).

Acrocephalus arundinaceus, *Seebohm, Brit. Birds*, i. p. 367, pl. 10 (1883); *id. Eggs of Brit. Birds*, p. 197, pl. 52. fig. 8 (1896).

The eggs of the Reed-Warbler are of a decidedly-pointed oval form, and they exhibit little gloss. The ground-colour varies from greyish white to a very pale green, and is densely mottled and blotched with greenish brown and underlying pale lavender or greenish grey. The markings are more or less confluent all over the shell, and at the larger end they usually form a dense cap. Some specimens are less densely marked than others, and occasionally the blotches are fairly well-defined and distinct. Many examples have a few blackish lines or dots at the larger end. Four eggs, forming a clutch taken in Norfolk, are white, smudged with pale grey. Specimens measure from .65 to .8 in length, and from .51 to .56 in breadth.

Acrocephalus dumetorum (Blyth).

(Plate IX. figs. 1 & 4.)

Acrocephalus dumetorum, *Anderson, Stray Feath.* iii. p. 351 (1875); *Dresser, Birds Eur.* ii. p. 561 (1876); *Legge, Birds Ceylon*, p. 545 (1879); *Seeböhm, Cat. Birds B. M.* v. p. 104 (1881); *Oates, Fauna Brit. Ind., Birds*, i. p. 359 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 226 (1889); *Nehrke, Kat. Eiersamml.* p. 33 (1899); *Sharpe, Hand-l.* iv. p. 188 (1903).

The eggs of Blyth's Reed-Warbler vary remarkably, and are of three distinct types.

Eggs taken by Capt. Hutton agree well with those described by Anderson (*l. c.*). They are of a blunt oval shape, slightly glossy, and of a white colour, speckled with rufous. They measure respectively: .65 by .53; .64 by .52; .64 by .51.

Those of a second type are of a somewhat pointed oval shape, moderately glossy, and of a pale pink colour, mottled and blotched with lilac or brownish pink.

Those of a third type are of a pointed oval shape, moderately glossy, and of a greyish-white colour, mottled and blotched in the same manner as in the second type, but with lavender, pale brown, and umber-brown, and occasionally marked with a few darker, almost black, specks.

Examples of the second and third types measure from .64 to .77 in length, and from .5 to .55 in breadth.

Acrocephalus agricola (Jerd.).

Acrocephalus agricolus, Dresser, *Birds Eur.* ii. p. 559 (1876).
Acrocephalus agricola, Seebohm, *Cat. Birds B. M.* v. p. 105 (1881);
 Oates, *Fauna Brit. Ind., Birds*, i. p. 359 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 229 (1889); *Wilson, Journ. Bomb. Nat. Hist. Soc.* xii. p. 635 (1899); *Nehrke. Kat. Eiersamml.* p. 33 (1899); *Sharpe, Hand-l.* iv. p. 189 (1903).

The eggs of the Paddy-field Reed-Warbler are of a regular oval form and moderately glossy. They are of a dull greenish-grey colour, blotched all over with greenish brown and pale grey, and with a few blackish specks at the broader end. They are hardly separable from some of the eggs of *A. streperus*. They measure from .65 to .68 in length, and from .5 to .52 in breadth.

Genus **TRIBURA**, *Hodgs.***Tribura thoracica** (*Blyth*).

(Plate IX. figs. 5 & 8.)

Dumeticola affinis, *Tacz. J. f. O.* 1872, p. 354.*Dumeticola thoracica*, *Tacz. J. f. O.* 1873, taf. i. fig. 3; *id. Faune Orn. Sibér. Orient.* p. 250 (1891); *Pleske in Prjev. Reisen, Vög.* pl. v. fig. 7 (1889-94); *Hartert, Nov. Zool.* i. p. 671 (1894).*Lusciniola thoracica*, *Seebohm, Cat. Birds B. M.* v. p. 124 (1881); *Nehrke. Kat. Eiersamml.* p. 33 (1899).*Tribura thoracica*, *Oates, Fauna Brit. Ind., Birds*, i. p. 363 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 229 (1889); *Sharpe, Hand-l.* iv. p. 190 (1903).

We provisionally follow Taczanowski in uniting the Spotted Bush-Warblers of Lake Baikal and Sikhim. He has, however, pointed out that there are important differences between them, and this is confirmed by an examination of the eggs of the birds from the two localities above mentioned.

The eggs of the Sikhim bird are of a broad oval shape and glossy. They are white or faint pinkish white, speckled and spotted all over with brownish red and lavender, the markings forming a slight cap or zone at the broad end. Five examples measure from .68 to .7 in length, and from .53 to .56 in breadth.

Eggs from Lake Baikal are of a regular oval shape and but slightly glossy. They are of a pure white colour, speckled and spotted with umber-brown, brownish purple, and lavender. In two specimens the markings are dense at the broad end, but do not form a noticeable cap. In a third specimen they form a wide and confluent zone round the broad end, and are very sparse elsewhere. Three examples measure respectively: .71 by .55; .71 by .53; .71 by .53.

The differences between the eggs of the birds from the two localities are very marked, much more so than might be gathered from the descriptions alone.

The eggs of the Indian Tailor-bird are of a pointed oval form and possess a considerable amount of gloss. The ground-colour is either white or pale blue, and is marked with different shades of reddish brown and chestnut. In some specimens the markings consist of small specks and spots pretty evenly distributed over the egg; in others they consist of spots, clouds, or blotches, and in these they are more or less confluent at the larger end, where they form a bold cap or an irregular zone. A few examples are marked almost exclusively at the larger end. The eggs measure from .6 to .7 in length, and from .45 to .5 in breadth.

Cisticola cisticola, *Sharpe, Cat. Birds B. M.* vii. p. 259 (1883); *id. Hand-l.* iv. p. 197 (1903).

The eggs of the Fantail-Warbler taken in Europe are extremely variable, whereas those taken in India and Burma appear to be always of one type.

In shape the eggs are typically of an oval form, the majority being somewhat sharply pointed. They are very glossy.

European eggs, so far as they are represented in the Collection, are of five types: (1) plain white; (2) plain, pale greenish blue; (3) white, very minutely speckled all over with pale purple and dark purplish brown; (4) pinkish white, densely speckled all over with reddish brown; (5) pale blue, speckled and spotted with pinkish brown and underlying pale lilac, or with dark chocolate-brown.

Indian eggs, though varying slightly among themselves, may be considered as of one type. They are white, marked with reddish brown and underlying pale lilac. The markings are for the most part small specks, sometimes small spots, or the two combined. In a few specimens there is a ring of confluent blotches round the larger end with comparatively few markings elsewhere.

They measure from .55 to .68 in length, and from .44 to .48 in breadth.

Cisticola brunneiceps, *Sharpe, Hand-l.* iv. p. 197 (1903).

Three eggs of the Japanese Fantail-Warbler are rather wide ovals, somewhat pointed towards the smaller end. The ground-colour is white with the faintest bluish tinge, sparsely spotted and speckled with light red and reddish brown, the markings being most numerous round the larger end, where there are underlying spots and blotches of pale lilac, the whole forming an ill-defined zone. The eggs measure .6 to .65 in length, by .48 in breadth.

Cisticola cherina, *Sharpe, ed. Layard's Birds S. Africa*, p. 278 (1875-84); *id. Cat. Birds B. M.* vii. p. 264 (1883); *Nehr. Kat. Eiersamml.* p. 56 (1899); *Sharpe, Hand-l.* iv. p. 197 (1903).

The eggs of the Brown Fantail-Warbler are of a regular oval shape and slightly glossy. They are of a pale bluish-green colour, speckled, spotted, and blotched with brownish chestnut, lilac-red, and lavender. In some examples the markings are evenly distributed over the shell; in others they are chiefly clustered round the broad end of the egg in the form of a bold zone. Specimens measure from .59 to .71 in length, and from .47 to .5 in breadth.

Cisticola ruficeps, Gould, *Handb. Birds Austr.* i. p. 353 (1865); Ramsay, *Ibis*, 1868, p. 277; North, *Nests & Eggs Austr. Birds*, p. 127 (1889).
Cisticola erythrocephala, Jerd. *Birds Ind.* ii. p. 175 (1863); Davison, *Stray Feath.* x. p. 392 (1883); Terry, *Stray Feath.* x. p. 476 (1887); Oates, *Fauna Brit. Ind., Birds*, i. p. 371 (1889).
Cisticola volitans, Swinhoe, *Ibis*, 1863, p. 304; Oates, *Fauna Brit. Ind., Birds*, i. p. 373 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 236 (1889).

The eggs of the Red-headed Fantail-Warbler are short ovals, somewhat pointed, and moderately glossy. The ground is pale blue. Those of the Formosan bird are spotted and speckled with chocolate-brown, and the markings are rather dense at the large end, sparse elsewhere. The eggs of the Pegu bird are spotted with pale rufous, very evenly over the whole shell. In one specimen the markings consist entirely of a few very large blotches. The eggs vary from .52 to .57 in length, and from .4 to .45 in breadth, but the eggs from Pegu are distinctly larger than those from Formosa.

Eggs from Australia appear to vary from the narrow to the broad oval in shape and to be moderately glossy. They are also of a bluish-green colour, speckled and blotched, chiefly at the broad end, with reddish brown and lilac. They measure from .58 to .68 in length, and from .46 to .5 in breadth.

Cisticola tinniens (Licht.).

- Drymœca levaillantii*, Ayres, *Ibis*, 1869, p. 291.
Cisticola tinniens, Sharpe, *ed. Layard's Birds S. Africa*, p. 265 (1875-84); *id. Cat. Birds B. M.* vii. p. 273 (1883); *Nehrke. Kat. Eiersamml.* p. 56 (1899); Stark & Selater, *Fauna S. Africa, Birds*, ii. p. 147 (1901); Sharpe, *Hand-l.* iv. p. 198 (1903).

The eggs of Le Vaillant's Fantail-Warbler are of a somewhat pointed oval shape and very glossy. Those in the Collection are of several distinct types. The eggs of one clutch are pinkish white, freckled with pinkish brown, principally at the broad end, where a conspicuous broad zone or cap is formed. The eggs of a second clutch are blue, spotted and blotched, especially at the broad end,

with chocolate-brown and lilac. Other eggs are pale blue, blotched equally all over with pale chestnut and lilac. Others again are white, in some cases speckled, in others spotted, with chestnut and lilac. They measure from .61 to .64 in length, and from .46 to .48 in breadth.

The eggs of Franklin's Wren-Warbler are of an oval form, some being pointed and others somewhat blunt. They are very glossy. They are of two types of coloration, and these are about equally represented by the specimens in the Collection. In the first, the egg is of a plain greenish-blue colour, absolutely unmarked. In the second, the ground is greenish blue, speckled and spotted with chestnut and reddish brown, generally very thickly at the broad end, where the markings form a cap or zone, and sparingly elsewhere. The eggs measure from .53 to .62 in length, and from .4 to .45 in breadth.

The eggs of Beavan's Wren-Warbler are of a regular oval shape and possess a considerable amount of gloss. One egg in the Collection is of a plain greenish-blue colour. The others have the ground of this same colour, but are speckled and spotted with chestnut. The markings are thinly scattered over the shell, except at the broad end, where they are confluent and form a well-marked zone. Specimens measure from .55 to .61 in length, and from .45 to .47 in breadth.

Franklinia buchanani (*Blyth*).

(Plate IX. fig. 17.)

- Cisticola buchanani*, *Sharpe, Cat. Birds B. M.* vii. p. 246 (1883); *Nehrke. Kat. Eiersamml.* p. 55 (1899).
Franklinia buchanani, *Oates, Fauna Brit. Ind., Birds*, i. p. 378 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 243 (1889); *Sharpe, Hand-l.* iv. p. 200 (1903).

The eggs of the Rufous-fronted Wren-Warbler vary from a narrow to a broad oval shape and are fairly glossy. They are greyish white, sometimes with a slight tinge of green, thickly speckled all over, but most densely at the larger end, with reddish brown in some specimens, purplish brown in others, and underlying dull purple or lilac. The markings are generally minute, but on many examples they are intermingled with spots or small blotches, especially at the large end, where they are frequently confluent and form a cap or zone. The density of the speckling varies greatly in different specimens. The eggs measure from .55 to .65 in length, and from .43 to .52 in breadth.

Genus **LATICILLA**, *Blyth*.

Laticilla burnesi (*Blyth*).

(Plate IX. fig. 20.)

Laticilla burnesi, *Sharpe, Cat. Birds B. M.* vii. p. 119 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 380 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 247 (1889); *Sharpe, Hand-l.* iv. p. 200 (1903).

The eggs of the Long-tailed Grass-Warbler are of a rather blunt oval shape, and exhibit a considerable amount of gloss. They are white in some cases, pale green in others, densely spotted and blotched with umber-brown and lavender or with brownish chestnut and lavender. The markings are generally coarse and confluent at the broad end. Specimens measure from .71 to .82 in length, and from .53 to .57 in breadth.

Genus **NESILLAS**, *Oberholser*.

Nesillas typica (*Hartl.*).

Ellisia typica, *E. Newton, Ibis*, 1863, p. 343, pl. xiii. fig. 6; *Cowan, Proc. R. Phys. Soc. Edinb.* vii. p. 148 (1882); *Sharpe, Cat. Birds B. M.* vii. p. 120 (1883); *Nehrke, Kat. Eiersamml.* p. 52 (1899)
Ellisia madagascariensis typica, *Milne-Edwards & Grandidier, Hist. Nat. Madag., Ois.* i. p. 329, pl. 303. figs. 1, 1a (1879).
Nesillas typica, *Sharpe, Hand-l.* iv. p. 201 (1903).

The eggs of Hartlaub's Warbler are of the same type as those of *Hypolais hypolais* and its allies. They are of a greyish-pink colour, marked with spots, streaks, blotches, and twisted lines of deep purplish brown and lavender-grey. On some specimens the lines are numerous and wind about the broader half of the shell, much as in some of the eggs of the Buntings. Other specimens are blotched and clouded with brownish pink, the dark markings and lines of purplish brown being nearly entirely absent. Specimens measure from .77 to .87 in length, and from .55 to .65 in breadth.

Nesillas lantzi (*Grandid.*).

Ellisia madagascariensis, var. *lantzii*, *Milne-Edwards & Grandidier, Hist. Nat. Madag., Ois.* i. p. 330, pl. 303, figs. 2, 2 a (1879).

Ellisia lantzii, *Cowan, Proc. R. Phys. Soc. Edinb.* vii. p. 148 (1882).

Ellisia lantzi, *Sharpe, Cat. Birds B. M.* vii. p. 121 (1883); *Nehrke, Kat. Eiersamml.* p. 52 (1899).

Nesillas lantzi, *Sharpe, Hand-l.* iv. p. 201 (1903).

The eggs of Lantzi's Warbler are very similar to those of *N. typica*, but they have a much darker greyish-pink ground, the markings are less frequent, and in many specimens the twisted lines are altogether absent. Nine examples measure from .77 to .85 in length, and from .58 to .63 in breadth.

|----------------|---------------------------|
| 9. Madagascar. | Rev. W. Deans Cowan [P.]. |
|----------------|---------------------------|

Genus **SPILOPTILA**, *Sundev.*

Spiloptila ocularis (*A. Smith*).

Drymœca ocularia, *Ayres, Ibis*, 1871, p. 101; *Sharpe, ed. Layard's Birds S. Africa*, p. 256 (1875-84).

Spiloptila ocularia, *Sharpe, Cat. Birds B. M.* vii. p. 232 (1883); *Nehrke, Kat. Eiersamml.* p. 55 (1899); *Stark & Schlater, Fauna S. Africa, Birds*, ii. p. 138 (1901).

Spiloptila ocularis, *Sharpe, Hand-l.* iv. p. 201 (1903).

The eggs of the Rufous-eared Grass-Warbler are, according to Stark, of a pale bluish-green colour, rather thickly blotched with pale reddish brown. Those in the Collection, however, taken by Layard, are quite plain, one being of a pale blue colour and two others of a bluish-white colour. They are of a blunt oval form and glossy. Two examples measure respectively: .63 by .49; .58 by .46.

Genus **MEGALURUS**, *Horsf.*

Megalurus palustris, *Horsf.*

Megalurus palustris, *Sharpe, Cat. Birds B. M.* vii. p. 123 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 383 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 249 (1889); *Nehrke, Kat. Eiersamml.* p. 52 (1899); *Sharpe, Hand-l.* iv. p. 202 (1903).

The eggs of the Striated Marsh-Warbler vary much in shape, some being narrow ovals, others broad ovals, and others again

spheroidal. They exhibit a small amount of gloss. The ground colour is white, and this in some cases is densely speckled, in others speckled, mottled, and streaked, with purplish brown, umber-brown, and underlying lavender. The markings are more closely set together at the broad end than elsewhere, and sometimes form an irregular cap. Examples measure from .8 to .92 in length, and from .62 to .68 in breadth.

Megalurus gramineus (Gould).

Sphenœacus gramineus, *Gould, Handb. Birds Austr.* i. p. 400 (1865).
Megalurus gramineus, *Sharpe, Cat. Birds B. M.* vii. p. 125 (1883); *North, Nests & Eggs Austr. Birds*, i. p. 146 (1887); *Nehrke, Kat. Eiersamm.* p. 52 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 224, pl. 10 (1901); *Sharpe, Hand-l.* iv. p. 202 (1903).

The eggs of the Little Australian Grass-Warbler are of a blunt oval form and almost devoid of gloss. They are pinkish white, densely speckled and mottled with reddish brown, purplish red and underlying lavender. In some examples the markings are extremely dense round the larger end and form a broad zone. In others they are evenly distributed over the shell. Specimens measure from .7 to .75 in length, and from .52 to .58 in breadth.

Megalurus ruficeps, Tweed.

(Plate IX. fig. 19.)

Megalurus ruficeps, *Sharpe, Cat. Birds B. M.* vii. p. 125 (1883); *Stœere, List Birds & Mamm. Philipp.* p. 20 (1890); *Grant & Whitehead,*

Ibis, 1898, p. 240, pl. v. fig. 7; *Nehrsk. Kat. Eiersamml.* p. 53, taf. ii. fig. 10 (1899); *Sharpe, Hand-l.* iv. p. 202 (1903).

The eggs of the Rufous-headed Marsh-Warbler in the Collection are of a blunt oval shape and rather glossy. They are pinkish white, very finely and densely freckled all over with pinkish brown and lilac. The markings are denser at the larger end than elsewhere, and form an ill-defined zone or cap at that part. Five examples measure respectively: .82 by .6; .84 by .62; .86 by .64; .8 by .6; .81 by .6.

3. Marinduque, Philippine Islands, Steere Exped.
8th May.
2. Marinduque, May (*Steere Exped.*). Crowley Bequest.

Megalurus macrurus (*Salvad.*).

Megalurus macrurus, *Sharpe, Cat. Birds B. M.* vii. p. 126 (1883); *Nehrsk. Kat. Eiersamml.* p. 53 (1899); *Sharpe, Hand-l.* iv. p. 202 (1903).

An egg of the Long-tailed Grass-Warbler in the Collection is of a regular oval shape and fairly glossy. It is of a greyish-pink colour, speckled and blotched, chiefly at the broad end, with rich brownish purple and lavender. There are also a few hair-lines mingled with the other markings. It measures .88 by .62.

The three eggs from New Guinea also referred to this species are of an entirely different type; the ground-colour is pinkish white, densely speckled all over with rich brownish purple, especially toward the larger end, where the markings unite into cloudy blotches. They measure .9 to .95 by .60 to .64.

1. New Britain (*Nehrskorn Coll.*). Crowley Bequest.
3. South-eastern New Guinea. Mr. E. Weiske [C.].

Genus **SCHÆNICOLA**, *Blyth.*

Schœnicola platyura (*Jerd.*).

Schœnicola platyura, *Sharpe, Cat. Birds B. M.* vii. p. 110 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 384 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 251 (1889); *Sharpe, Hand-l.* iv. p. 203 (1903).

The egg of the Broad-tailed Grass-Warbler in the Collection is of a very broad oval form and fairly glossy. It is white, densely speckled and blotched with dull chestnut-brown and pale underlying lavender. At the broad end the markings are denser and more or less confluent. The example measures .73 by .6.

1. Belgaum, India, 19th Sept. Hume Coll.

Genus **BRADYPTERUS**, *Swains.***Bradypterus brachypterus** (*Vieill.*).

Bradypterus brachypterus, *Sharpe, ed. Layard's Birds S. Africa*, p. 286 (1875-84); *Butler, Feilden & Reid, Zool.* 1882, p. 245; *Sharpe, Cat. Birds B. M.* vii. p. 113 (1883); *Stark & Selater, Fauna S. Africa, Birds*, ii. p. 99 (1901); *Sharpe, Hand-l.* iv. p. 204 (1903).

The eggs of the Stripe-throated Reed-Warbler in the Collection are of a blunt oval form and moderately glossy. They are of a greenish-white colour, thickly spotted and mottled, especially at the broader end, with reddish brown and lavender. They measure respectively: .9 by .62; .8 by .62.

2. Cape of Good Hope (*Miss Dacres*: Crowley Bequest.
Tristram Coll.).

Genus **CHÆTORNIS**, *Gray.***Chætornis locustelloides** (*Blyth*).

(Plate IX. fig. 18.)

Chætornis locustelloides, *Sharpe, Cat. Birds B. M.* vii. p. 130 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 388 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 252 (1889); *Nehrke, Kat. Eiersamml.* p. 53 (1899); *Sharpe, Hand-l.* iv. p. 205 (1903).

The eggs of the Bristled Grass-Warbler are of a regular oval form and but very slightly glossy. They are white, with a tinge of pink, speckled and spotted, more densely at the larger end than elsewhere, with pinkish brown, lilac-red, and lavender. They measure from .76 to .85 in length, and from .57 to .62 in breadth.

Genus **HYPOLAIS**, *Brehm*.

Hypolais hypolais (*Linn.*).

Sylvia hypolais, *Thien. Fortpflanz. ges. Vög.* p. 168, tab. xix. fig. 13, *a-d* (1845-54).

Hypolais salicaria, *Baedeker, Eier Eur. Vög.* tab. 19. fig. 1 (1855-63).

Sylvia icterina, *Bree, Birds Eur.* ii. p. 58 (1867).

Hypolais icterina, *Dresser, Birds Eur.* ii. p. 521 (1874); *Seebohm, Cat. Birds B. M.* v. p. 77 (1881).

Hypolais hypolais, *Seebohm, Brit. Birds*, i. p. 381, pl. 10 (1883); *id. Eggs of Brit. Birds*, p. 198, pl. 52. fig. 10 (1896); *Sharpe, Hand-l.* iv. p. 207 (1903).

The eggs of the Icterine Tree-Warbler are of a regular oval form and possess a small amount of gloss. The ground-colour varies from greyish pink to pale brownish pink or salmon-pink, and is marked rather sparingly with spots of deep purplish brown or black. The spots on some specimens are very small, on others large, but they are always well-defined. A few examples are also marked with short lines and streaks, while others are covered with very fine lines which run over the shell in all directions and resemble the lines of a cobweb. The underlying markings are obsolete and often absent. Specimens measure from .67 to .81 in length, and from .51 to .56 in breadth.

Genus **IDUNA**, *Bonap.*

***Iduna olivetorum* (Gould).**

Sylvia olivetorum, *Thien. Fortypflanz. ges. Vög.* p. 171, tab. xix. fig. 14, *a-c* (1845-54); *Bree, Birds Eur.* ii. p. 49, pl. (1867).

Chloropeta olivetorum, *Baedecker, Eier Eur. Vög.* tab. 19. fig. 3 (1855-63).

Hypolais olivetorum, *Dresser, Birds Eur.* ii. p. 527 (1874); *Bree, Birds Eur.* 2nd ed. ii. p. 141, pl. (1875); *Seebohm, Cat. Birds B. M.* v. p. 79 (1881).

Iduna olivetorum, *Sharpe, Hand-l.* iv. p. 208 (1903).

The eggs of the Olive-tree Warbler are of quite the same character as those of *Hypolais hypolais* and *H. polyglotta*, but they are larger and have the ground-colour rather paler. It is noteworthy, however, that in the comparatively large series of the eggs of this species in the Collection, not one shows any indication of the cobweb-like combination of fine lines frequently found on the eggs of the other two species. At best there are only a few short detached lines on a few examples. A series of specimens measures from .8 to .85 in length, and from .55 to .6 in breadth. A remarkably small egg measures only .67 by .53.

***Iduna pallida* (*Hempr. & Ehr.*).**

Sylvia elaica, *Thien, Fortpflanz. ges. Vög.* p. 170, tab. xix. fig. 15, a-c (1845-54); *Bree, Birds Eur.* ii. p. 54, pl. (1867).

Chloropeta elaica, *Baedeker, Eier Eur. Vög.* tab. 19. fig. 4 (1855-63).

Hypolais elaica, *Tristram, Ibis*, 1867, p. 82; *Bree, Birds Eur.* 2nd ed. ii. p. 145, pl. (1875).

Hypolais pallida, *Dresser, Birds Eur.* ii. p. 537 (1874); *Seeböhm, Cat. Birds B. M.* v. p. 82 (1881); *Oates, Fauna Brit. Ind., Birds*, i. p. 392 (1889).

Iduna pallida, *Sharpe, Hand-l.* iv. p. 208 (1903).

The eggs of the Olivaceous Tree-Warbler are of a pale pinkish-grey colour, marked in the same manner as those of *I. olivetorum*. The markings, however, are on the whole rather smaller, and there is a general absence of lines. Measurements vary from .64 to .73 in length, and from .47 to .55 in breadth.

Iduna rama (Sykes).

- Hypolais rama*, *Dresser, P. Z. S.* 1874, p. 655, pl. lxxix.; *Seeböhm, Cat. Birds B. M.* v. p. 84 (1881); *Oates, Fauna Brit. Ind., Birds*, i. p. 391 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 254 (1889); *Nehrk. Kat. Eiersamml.* p. 32 (1899).
Iduna rama, *Sharpe, Hand-l.* iv. p. 208 (1903).

The eggs of Sykes's Tree-Warbler are of a broad and pointed oval shape and exhibit little or no gloss. They are of a creamy-

white colour, smeared and blotched with lavender-grey and marked with black specks, spots, small blotches, and twisted hair-lines. The markings sometimes extend over the whole shell, but more frequently they are almost entirely confined to the broader half of the egg. The black hair-lines are wanting in some specimens. Examples measure from .57 to .65 in length, and from .45 to .52 in breadth.

Nisoria undata, *Tristram, Ibis*, 1867, pp. 75, 86.

In the majority of the characteristic eggs of the Barred Warbler, the pale bluish-grey or neutral-tint markings underlie the dull greyish or buffish-white ground-colour, and there is no surface-pattern, or only a few very pale and obscure spots. But occasionally the overlying markings are present and conspicuous, in the shape

* These eggs cannot be separated into clutches, but Mr. Doig states that a clutch generally consists of four eggs.

of blotches and clouds of pale brown and lavender-grey. Both kinds are generally concentrated on the broader half of the egg, forming themselves into a rough zone. In shape the eggs do not vary much, being of a pointed oval form; they are dull in texture; they measure from .80 to .89 in length, and from .60 to .65 in breadth.

Sylvia sylvia, *Sharpe, Hand-l.* iv. p. 209 (1903).

Eggs of the Common Whitethroat in the large series in the Collection vary from a pointed to a blunt oval shape and are slightly glossy. The ground-colour ranges from pale buff to pale grey and from greenish-white to pale green. The markings consist of specks, spots, and blotches of various shades of grey, olive-brown, olive-green, umber-brown, and underlying lavender, and whereas in many examples these are evenly distributed over the whole shell, in others they are chiefly confined to the broader half of the egg, where they are often confluent and form a dense cap or zone. Some eggs are comparatively faintly marked, others have the markings very dark. Specimens measure from .65 to .8 in length, and from .5 to .6 in breadth.

Sylvia salicaria, Dresser, *Birds Eur.* ii. p. 429 (1876).

Sylvia simplex, Sharpe, *Hand-l.* iv. p. 209 (1903).

The eggs of the Garden-Warbler are of a somewhat pointed oval form and possess a considerable amount of gloss. They vary much in coloration. The ground-colour is sometimes pure white, but more commonly it ranges from creamy white to greenish white. In one type the markings consist of clouds and smudges of pale underlying lavender and yellowish brown, and some surface-spots and lines of deep umber-brown. In another type the surface-spots and lines are absent, and the shell is thickly blotched and smudged with yellowish brown and underlying lavender. In a third type the umber-brown surface-markings preponderate and the underlying markings are comparatively few and faint. In a fourth type, an unusual one, the ground-colour is salmon-pink, clouded with pinkish brown and spotted with umber-brown. Specimens measure from .7 to .85 in length, and from .52 to .62 in breadth.

The eggs of the Orphean Warbler are of a pointed oval shape and generally very glossy. The ground is of an exceedingly pale greyish or bluish-white colour, and the markings are of three types. In one they consist of specks and small spots of lavender and olive-brown, forming an ill-defined cap or zone at the larger end. In another the whole shell, and especially the broader half, is covered with blotches, clouds, and streaks of lavender and olive-brown. In the third the two types of markings are combined, but, in addition, there are numerous round spots of very deep umber-brown or black, together with a few short lines and scrawls of the same colour. In all three types, the markings are larger and more prominent at the broad end than elsewhere. Examples measure from .72 to .91 in length, and from .55 to .63 in breadth.

Sylvia curruca (Linn.).

Sylvia curruca, *Thien. Fortpflanz. ges. Vög.* p. 181, tab. xx. fig. 11, *a-d* (1845-54); *Baedeker, Eier Eur. Vög.* tab. 51. fig. 8 (1855-63); *Hewitson, Eggs of Brit. Birds*, i. p. 132, pl. xxxv. fig. iv (1856); *Tristram, Ibis*, 1867, p. 84; *Dresser, Birds Eur.* ii. p. 383 (1876); *Seebohm, Cat. Birds B. M.* v. p. 16 (1881); *id. Brit. Birds*, i. p. 410, pl. 10 (1883); *id. Eggs of Brit. Birds*, p. 203, pl. 52. fig. 20 (1896); *Sharpe, Hand-l.* iv. p. 210 (1903).

The eggs of the Lesser Whitethroat are of a pointed oval form. The amount of gloss on the shell is very variable, some specimens being highly glossed and others wanting it. They are of a white or greyish-white colour, blotched and spotted, chiefly at the large end, where the markings generally form a zone or a cap, with olive or greenish-brown, umber-brown, and underlying lavender. Many specimens are marked in addition with some spots and lines of very deep brown or black. They measure from .63 to .75 in length, and from .49 to .55 in breadth.

Stoparola conspicillata, *Baedeker, Eier Eur. Vög.* tab. 51. fig. 6 (1855-63).

The eggs of the Spectacled Warbler are of a somewhat pointed oval shape and moderately glossy. They are of a greenish-grey colour, speckled and mottled with brown, which in some specimens is pale, in others dark. The markings are usually evenly distributed over the whole shell, but in a small number of specimens they form a cap at the broad end. Examples measure from .62 to .66 in length, and from .48 to .51 in breadth.

Curruca atricapilla, *Baedeker, Eier Eur. Vög.* tab. 51. fig. 12 (1855-63); *Tristram, Ibis*, 1859, p. 417.

The eggs of the Blackcap are mostly of a pointed oval form and they are often very glossy. In the common type the ground-colour varies from greyish white to grey, and this is smudged and mottled

with olive-brown, yellowish brown, and underlying pale lavender. Many specimens of this type are also spotted with deep umber-brown. In another type the ground-colour is salmon-pink, smudged and clouded with darker pink and grey and marked with spots and lines of rich reddish brown. In a third type the shell is white, prettily blotched and speckled with chestnut and pale lavender. Comparatively few eggs of the Blackcap exhibit any well-defined cap or zone at the larger end, the markings being generally evenly distributed over the whole shell. They measure from .7 to .87 in length, and from .56 to .6 in breadth.

The eggs of the Sub-alpine Warbler are of a broad oval form, a few specimens being rather lengthened and others spheroidal. They have very little gloss. The eggs are of two distinct types. In one, the ground-colour is greyish or bluish white, thickly speckled and mottled with pale brown or greenish brown and underlying lavender. In the other, the ground-colour is pinkish white, thickly marked, as in the first type, with reddish brown and pale lavender. Three examples, forming a clutch, differ from both the above types in being pure white, speckled and spotted, almost entirely at the broad end, with dark umber-brown and pale lavender. Specimens measure from .6 to .75 in length, and from .48 to .55 in breadth.

Pyrophthalma melanocephala, *Baedeker, Eier Eur. Vög.* tab. 51. fig. 4 (1855-63).

Melizophilus melanocephalus, *Sharpe, Hand-l.* iv. p. 212 (1903).

The eggs of the Sardinian Warbler are mostly of a pointed oval shape and exhibit comparatively little gloss. In one type, the ground-colour is greyish white or greenish white, profusely mottled and speckled with olive-brown and underlying pale lavender. In another, the ground-colour is white or pinkish white, thickly mottled and spotted with lavender and reddish brown, the latter colour

varying in tint in different clutches. In both these types the markings are generally evenly spread over the shell. In a third type, the ground-colour is nearly pure white, and the broader half of the egg is thickly spotted and blotched with chestnut-brown and lavender, the smaller half being very sparingly marked. Measurements vary from .66 to .75 in length, and from .52 to .56 in breadth.

Melizophilus undatus (Bodd.).

Sylvia provincialis, *Thien. Fortpflanz. ges. Vög.* p. 184, tab. xx. fig. 10, *a, b* (1845-54); *Seeböhm, Cat. Birds B. M.* v. p. 31 (1881); *id. Brit. Birds*, i. p. 414, pl. 10 (1883); *id. Eggs of Brit. Birds*, p. 204, pl. 53. fig. 1 (1896).

Melizophilus provincialis, *Baedecker, Eier Eur. Vög.* tab. 51. fig. 3 (1855-63); *id. J. f. O.* 1856, p. 32, taf. i. fig. 4; *Hewitson, Eggs of Brit. Birds*, i. p. 143, pl. xxxvii. (1857); *Tristram, Ibis*, 1859, p. 418.

Melizophilus undatus, *Dresser, Birds Eur.* ii. p. 441 (1875); *Sharpe, Hand-l.* iv. p. 212 (1903).

The eggs of the Dartford Warbler are of a rather pointed oval shape, and while some specimens exhibit a high gloss, others are entirely devoid of it. The common type of egg of this species is of a greyish or greenish-white colour, or, occasionally, of a pure white colour, speckled and blotched with umber-brown and lavender. In some examples the markings are small and distinct; in others they are coarse, frequently coalescing and forming a bold cap at the broad end.

A clutch of eggs from Spain differs from the above in being of a pinkish-white colour, speckled with chestnut, lilac-red, and lavender, very densely at the broad end, where the markings form a cap.

Two specimens, forming another clutch, are of an olive-grey colour, mottled with lavender-grey and pale brown, and spotted, in the case of one example, with umber-brown.

The eggs vary from .64 to .72 in length, and from .49 to .53 in breadth.

- Phylloscopus sibilator*, *Sharpe, Hand-l.* iv. p. 212 (1903).

The eggs of the Wood-Wren are mostly of a broad oval shape, a few being spheroidal. They have a considerable amount of gloss. The ground-colour is white, occasionally tinged with pink or grey, speckled and streakily blotched with umber or purplish brown and underlying lavender-grey. The markings are usually dense everywhere, but they are larger and frequently confluent at the broad end. The eggs measure from .6 to .7 in length, and from .47 to .54 in breadth.

Phylloscopus trochilus (Linn.).

Sylvia trochilus, *Thien. Fortpflanz. ges. Vög.* p. 163, tab. xix. fig. 9, a-c (1845-54); *Hewitson, Eggs of Brit. Birds*, i. p. 137, pl. xxxvi. figs. i, ii (1856).

Phyllopneuste trochilus, *Baedecker, Eier Eur. Vög.* tab. 19. fig. 7 (1855-63).

Phylloscopus trochilus, *Seeböhm & Harvie-Brown, Ibis*, 1876, p. 215; *Dresser, Birds Eur.* ii. p. 491 (1879); *Seeböhm, Cat. Birds B. M.* v. p. 56 (1881); *id. Brit. Birds*, i. p. 430, pl. 10 (1883); *id. Eggs of Brit. Birds*, p. 206, pl. 53. figs. 5, 6 (1896); *Sharpe, Hand-l.* iv. p. 213 (1903).

The eggs of the Willow-Wren vary in shape from the oval to the spheroidal, and they have a moderate amount of gloss. The ground is white or creamy white, occasionally tinged with very pale pink. The markings are of two types. In one, they consist of very small specks of pale reddish brown, profusely sprinkled over the whole shell; in the other, they consist of distinct spots and small blotches of pale reddish brown, sparingly set over the shell, except at the broad end, where they are more frequent and often form an irregular zone. Some specimens are very sparingly sprinkled with a few dots only. The majority of the eggs of this species have no underlying markings; in a few there are some obsolete dots of pale lavender. Numerous examples measure from .55 to .73 in length, and from .45 to .5 in breadth.

Phylloscopus minor, *Sharpe, Hand-l.* iv. p. 213 (1903).

The eggs of the Chiffchaff are usually of a regular oval form, but some are spheroidal. They possess a considerable amount of gloss. The ground-colour is white, and the markings consist of fine dots, small spots, and less frequently of small blotches. Many specimens are marked entirely with fine specks of deep purplish brown, almost black in its intensity; others with spots of reddish brown, which are large and more numerous at the broad end, where they often form an irregular zone. Eggs of both types exhibit specks and spots of underlying lilac or violet-grey, which, however, are generally very inconspicuous. Although some of the eggs of the Chiffchaff are not separable from some of those of the Willow-Wren, the eggs of the former species may generally be recognized by the deeper colour of the markings, which are also

much less numerous and smaller. Specimens measure from .55 to .65 in length; and from .45 to .5 in breadth.

The eggs of the Brown Willow-Warbler or Siberian Chiffchaff resemble those of *P. minor* so closely, that no separate description is

necessary. They measure from .58 to .64 in length, and from .45 to .5 in breadth. One very narrow, lengthened example measures .75 by .44.

Phylloscopus tytleri, *Brooks*.

Phylloscopus tytleri, *Seebohm, Cat. Birds B. M.* v. p. 66 (1881); *Oates, Fauna Brit. Ind., Birds*, i. p. 402 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 258 (1889); *Sharpe, Hand-l.* iv. p. 214 (1903).

An egg of Tytler's Willow-Warbler, taken by Capt. Cock, is of a regular oval shape, totally devoid of gloss and of a plain white colour. It measures .57 by .46.

1. Sonamurg, Kashmir, 4th June (*C. R.* Crowley Bequest.
Cock: Tristram Coll.).

Genus *OREOPNEUSTE*, *Swinh.*

Oreopneuste affinis (*Tickell*).

Phylloscopus affinis, *Seebohm, Cat. Birds B. M.* v. p. 65 (1881); *Oates, Fauna Brit. Ind., Birds*, i. p. 401 (1889); *Hartert, Nov. Zool.* i. p. 671 (1894).

Oreopneuste affinis, *Sharpe, Hand-l.* iv. p. 214 (1903).

The eggs of Tickell's Willow-Warbler are rather blunt ovals, somewhat pointed towards the smaller end; they are pure white with some gloss, one specimen being almost devoid of markings, the other three with a faint freckled zone of light rufous-brown round the larger end. They measure .58 to .62 in length, by .48 in breadth.

4. Koko-nor (*Tring Museum*). Crowley Bequest.

Oreopneuste fuscata (Blyth).

- Phyllopneuste fuscata*, *Tacz. J. f. O.* 1872, p. 357; 1873, taf. i. fig. 6.
Lusciniola fuscata, *Seebohm, Cat. Birds B. M.* v. p. 127 (1881); *Tacz. Faune Orn. Sibér. Orient.* p. 272 (1891); *Nehrk. Kat. Eiersamml.* p. 34 (1899).
Phylloscopus fuscatus, *Oates, Fauna Brit. Ind., Birds*, i. p. 405 (1889).
Oreopneuste fuscatus, *Sharpe, Hand-l.* iv. p. 215 (1903).

The eggs of the Dusky Willow-Warbler are of a pointed oval shape, moderately glossy, and of a plain white colour. Five examples measure respectively: .67 by .52; .63 by .5; .64 by .5; .60 by .51; .68 by .5.

Oreopneuste neglecta, Hume.

- Phylloscopus neglectus*, *Hume, Ibis*, 1870, p. 143; *Blanf. East. Persia*, ii. p. 182 (1876); *Seebohm, Ibis*, 1877, p. 99; *Witherby, Ibis*, 1903, p. 537.
Lusciniola neglecta, *Seebohm, Ibis*, 1880, p. 277; *id. Cat. Birds B. M.* v. p. 131 (1881).
Oreopneuste neglectus, *Sharpe, Hand-l.* iv. p. 215 (1903).

The eggs of Hume's Grass-Warbler are oval in shape, distinctly pointed towards the smaller end, and pure white with a slight gloss. They measure .6 by .45.

4. Dasht-i-arjan, Persia, 28th April. H. F. Witherby, Esq. [P.].

Genus REGULOIDES, Blyth.**Reguloides proregulus (Pall.).**

- Reguloides proregulus*, *Tacz. J. f. O.* 1872, p. 360, 1873, taf. i. fig. 10; *Sharpe, Hand-l.* iv. p. 215 (1903).
Phylloscopus proregulus, *Seebohm, Cat. Birds B. M.* v. p. 71 (1881); *Oates, Fauna Brit. Ind., Birds*, i. p. 408 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 260 (1889); *Dresser, Birds Eur.* ix. (*Suppl.*) p. 73 (1895).
Phyllopneuste proregulus, *Tacz. Faune Orn. Sibér. Orient.* p. 267 (1891).

The eggs of Pallas's Willow-Warbler in the Collection are of a rather broad but pointed oval shape and slightly glossy. They are of a creamy-white colour, speckled and spotted with reddish brown and lilac, densely on the broader half, where the markings form a zone, and sparingly elsewhere. They measure .53 by .44 and .54 by .43 respectively.

Reguloides superciliosus (Gmel.).

Phylloscopus superciliosus, *Dresser, Birds Eur.* ii. p. 469 (1874); *Seebohm, Ibis*, 1879, p. 12; *id. Cat. Birds B. M.* v. p. 68 (1881); *id. Brit. Birds*, i. p. 441, pl. 10 (1883); *id. Eggs of Brit. Birds*, p. 208, pl. 53. fig. 9 (1896); *Popham, Ibis*, 1898, p. 496.

Phyllopneuste superciliosa, *Tacz. Faune Orn. Sibér. Orient.* p. 264 (1891).

Reguloides superciliosus, *Sharpe, Hand-l.* iv. p. 216 (1903).

The eggs of the Yellow-browed, or Crowned Willow-Warbler in the Collection are inseparable from many of the eggs of *R. humei*, being white, speckled and spotted, more so at the large end than elsewhere, with reddish brown and some obsolete underlying lavender. Five examples measure from .56 to .6 in length, and .45 in breadth.

5. Yenesei Valley, Lat. $66\frac{1}{2}^{\circ}$ N., 25th June (*H. Seebohm*). Seebohm Coll.

Reguloides humei (Brooks).

(Plate X. figs. 5 & 6.)

Phylloscopus humii, *Seebohm, Cat. Birds B. M.* v. p. 67 (1881); *Oates, Fauna Brit. Ind., Birds*, i. p. 410 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 262 (1889); *Wilson, Journ. Bomb. Nat. Hist. Soc.* xii. p. 636 (1899).

Reguloides humei, *Sharpe, Hand-l.* iv. p. 216 (1903).

The eggs of Hume's Willow-Warbler vary from a pointed to a blunt oval shape and possess little gloss. They are white, marked with specks and spots of reddish brown and very pale underlying lavender. On some specimens the markings are very fine, on others rather coarse and blotchy, but in either case they are most dense over the broader half of the egg, where they form an ill-defined cap. Examples measure from .52 to .6 in length, and from .42 to .45 in breadth.

Genus **ACANTHIZA**, *Vig. & Horsf.***Acanthiza nana**, *Vig. & Horsf.*

Acanthiza nana, *Gould, Handb. Birds, Austr.* i. p. 371 (1865); *Ramsay, P. Z. S.* 1866, p. 573; *Sharpe, Cat. Birds B. M.* vii. p. 292 (1883); *North, Nests & Eggs Austr. Birds*, p. 137, pl. xiii. fig. 16 (1889); *Nehrke, Kat. Eiersamml.* p. 56 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 228 (1901); *Sharpe, Hand-l.* iv. p. 219 (1903).

The eggs of the Yellow Tit-Warbler are of an elongated oval shape and exhibit a small amount of gloss. They are creamy white, spotted and freckled with chestnut and lilac-grey. The markings are larger and more numerous at the broad end, and form a zone or cap at that part. Examples measure from $\cdot66$ to $\cdot7$ in length, and from $\cdot41$ to $\cdot49$ in breadth.

Acanthiza inornata, *Gould.*

(Plate X. fig. 8.)

Acanthiza inornata, *Gould, Handb. Birds Austr.* i. p. 370 (1865); *Sharpe, Cat. Birds B. M.* vii. p. 293 (1883); *North, Nests & Eggs Austr. Birds*, p. 136 (1889); *Campbell, Nests & Eggs Austr. Birds*, i. p. 229 (1901); *Sharpe, Hand-l.* iv. p. 219 (1903).

The eggs of the Plain-coloured Tit-Warbler in the Collection are of a very broad oval shape and moderately glossy. They are creamy white, speckled with minute markings of chestnut and lilac-grey. The specks are very evenly distributed over the entire shell, but at the apex of the broad end they coalesce and form a dense but very small cap. Two examples measure respectively: $\cdot62$ by $\cdot5$; $\cdot62$ by $\cdot51$.

***Acanthiza apicalis*, Gould.**

(Plate X. fig. 9.)

Acanthiza apicalis, *Gould, Handb. Birds Austr.* i. p. 368 (1865); *Sharpe, Cat. Birds B. M.* vii. p. 296 (1883); *North, Nests & Eggs Austr. Birds*, p. 135 (1889); *Nehr. Kat. Eiersamml.* p. 57 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 233 (1901); *Sharpe, Hand-l.* iv. p. 219 (1903).

Two eggs of the Broad-tailed Tit-Warbler are oval in shape, slightly pointed towards the small end, the ground-colour pinkish white: in one the entire shell is spotted and dotted with light red and dull lavender markings, most numerous round the larger end, where they form an irregular zone; in the second specimen the markings are nearly all collected on the larger end, where they form a light rufous cap, the rest of the shell being very sparingly marked. They measure respectively: .66 by .48; .67 by .5.

- | | |
|--|------------------|
| 2. W. Australia (<i>A. J. Campbell</i>). | Crowley Bequest. |
|--|------------------|

***Acanthiza pyrrhopygia*, Gould.**

Acanthiza pyrrhopygia, *Gould, Handb. Birds Austr.* i. p. 369 (1865); *Sharpe, Cat. Birds B. M.* vii. p. 296 (1883); *North, Nests & Eggs Austr. Birds*, p. 136 (1889); *Nehr. Kat. Eiersamml.* p. 57 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 234 (1901); *Sharpe, Hand-l.* iv. p. 220 (1903).

Three eggs of the Red-rumped Tit-Warbler are of a rather wide oval shape; the ground-colour white, slightly glossed and finely dotted and marked with light red, the markings being most numerous round the larger end, where they form a more or less defined zone. A single egg from the Nehrkorn Collection, said to be of this species, is very different, the yellowish-brown markings being nearly all collected in a cap on the larger end. They measure $\cdot 61$ to $\cdot 65$ in length, by $\cdot 49$ in breadth.

Acanthiza lineata, Gould.

(Plate X. fig. 14.)

Acanthiza lineata, Gould, *Handb. Birds Austr.* i. p. 372; *Ramsay, P. Z. S.* 1866, p. 571; *Sharpe, Cat. Birds B. M.* vii. p. 297 (1883); *North, Nests & Eggs Austr. Birds*, p. 138 (1889); *Nehrk. Kat. Eiersamml.* p. 57 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 234 (1901); *Sharpe, Hand-l.* iv. p. 220 (1903).

The eggs of the Striated Tit-Warbler in the Collection are of a regular oval shape and slightly glossy. They are white, speckled with chestnut-brown and very faint lavender. The markings are almost all concentrated at the broad end, where they form a well-defined zone. At this part there are also a few black specks and fine lines. They measure $\cdot 63$ to $\cdot 67$, by $\cdot 47$ to $\cdot 5$.

Acanthiza chrysorrhoa (Quoy & Gaim.).

Geobasileus chrysorrhous, Gould, *Handb. Birds Austr.* i. p. 374 (1865); *Ramsay, P. Z. S.* 1866, p. 575.
Acanthiza chrysorrhoa, *Sharpe, Cat. Birds B. M.* vii. p. 298 (1883); *Nehrk. Kat. Eiersamml.* p. 57 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 238 (1901).
Geobasileus chrysorrhoa, *North, Nests & Eggs Austr. Birds*, p. 141 (1889); *Sharpe, Hand-l.* iv. p. 220 (1903).

The eggs of the Yellow-rumped Tit-Warbler are of a pointed oval shape and slightly glossy. Many are plain white, others are sparingly speckled at the broad end with rufous, and others are boldly marked with spots and small blotches of chestnut-brown, chiefly at the broad end. They measure from $\cdot 59$ to $\cdot 76$ in length, and from $\cdot 47$ to $\cdot 52$ in breadth.

Acanthiza reguloides, Vig. & Horsf.

Geobasileus reguloides, Gould, *Handb. Birds Austr.* i. p. 376 (1865); *Ramsay, P. Z. S.* 1866, p. 575; *North, Nests & Eggs Austr. Birds*, p. 140 (1889).

Acanthiza reguloides, Sharpe, *Cat. Birds B. M.* vii. p. 299 (1883); *Nehrke, Kat. Eiersamml.* p. 57 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 239 (1901); *Sharpe, Hand-l.* iv. p. 220 (1903).

The eggs of the Buff-rumped Tit-Warbler are of a broad oval shape and moderately glossy. Those in the Collection are of two types, in both of which the ground-colour is white, but the markings are different. Some eggs are delicately speckled with fine dots of a pale rufous and lavender, chiefly in the form of an irregular and thin zone round the broad end. Others are densely marked with spots and blotches of chestnut-brown and lavender, especially at the broad end, where the markings are disposed in the shape of a dense cap or irregular zone. Examples measure from .61 to .69 in length, and from .48 to .51 in breadth.

Genus **SERICORNIS**, *Gould*.

Sericornis brunnea (*Gould*).

Pyrrhuloxia brunnea, *Gould, Handb. Birds Austr.* i. p. 384; *Ramsay, Proc. Linn. Soc. N.S.W.* vii. p. 49, pl. 3, fig. 8 (1882); *North, Nests & Eggs Austr. Birds*, p. 145 (1889); *Campbell, Nests & Eggs Austr. Birds*, i. p. 442, pl. 10 (1901).

Sericornis brunnea, *Sharpe, Cat. Birds B. M.* vii. p. 302 (1883); *id. Hand-l.* iv. p. 220 (1903).

The egg of the Red-throated Scrub-Warbler in the Collection is of a very blunt oval form and moderately glossy. It is of a pale buff colour, marked at the broad end with a dense cap of deep purplish brown. It measures .77 by .59.

1. Australia,

Purchased.

Sericornis citreigularis, *Gould*.

Sericornis citreogularis, *Thien. Fortpflanz. ges. Vög.* tab. xxiii. fig. 16 (1845-54); *Gould, Handb. Birds Austr.* i. p. 354 (1865); *Sharpe, Cat. Birds B. M.* vii. p. 302 (1883); *North, Nests & Eggs Austr. Birds*, p. 129, pl. ix. fig. 5 (1889); *Nehrke. Kat. Eiersamml.* p. 57 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 243, pl. 10 (1901).

Sericornis citreigularis, *Sharpe, Hand-l.* iv. p. 220 (1903).

The eggs of the Yellow-throated Scrub-Warbler are of a pointed oval form and exhibit a considerable amount of gloss. They are purplish buff or chocolate-brown, marked at the broad end with a cap or zone of a darker shade of the same colour. Examples measure from .93 to 1.03 in length, and from .67 to .7 in breadth.

5. New South Wales.

Crowley Bequest.

(*A. J. North*).

Sericornis frontalis (*Vig. & Horsf.*).

(Plate X. figs. 10 & 13.)

Sericornis frontalis, *Gould, Handb. Birds Austr.* i. p. 359 (1865); *Sharpe, Cat. Birds B. M.* vii. p. 303 (1883); *North, Nests & Eggs Austr. Birds*, p. 131 (1889); *Nehrke. Kat. Eiersamml.* p. 57 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 245 (1901); *Sharpe, Hand-l.* iv. p. 220 (1903).

The eggs of the White-browed Scrub-Warbler are of a pointed oval form and somewhat glossed. They are pale purplish buff or whitish buff, either marked at the large end with a cap or zone of darker purplish-brown spots and lavender-grey clouded blotches, and with a few scattered markings of the same colour over the rest

of the shell, or very finely marked all over the shell with brown and underlying grey dots. They measure $\cdot 75$ to $\cdot 78$ by $\cdot 57$ to $\cdot 58$ inch..

1. Australia (*Tristram Coll.*). Crowley Bequest.
2. Yarra River, Victoria, 24th Sept. Crowley Bequest.

Sericornis magnirostris (*Gould*).

Sericornis magnirostris, *Gould, Handb. Birds Austr.* i. p. 362 (1865); *Sharpe, Cat. Birds B. M.* vii. p. 305 (1883); *North, Nests & Eggs Austr. Birds*, p. 132 (1889); *Nehrke. Kat. Eiersamml.* p. 57 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 247, pl. 10 (1901); *Sharpe, Hand-l.* iv. p. 221 (1903).

The eggs of the Large-billed Scrub-Warbler in the Collection are of a very regular oval form and moderately glossy. The ground-colour varies from white to pale brownish pink. In two specimens, the markings are confined almost entirely to the broad end, where they form a zone of confluent purplish-brown spots, intermingled with a few black spots and short lines. A third specimen is similarly marked at the broad end, but is also covered with some cob-web-like smears and lines which run over the whole surface of the shell. Three specimens measure respectively: $\cdot 76$ by $\cdot 59$; $\cdot 76$ by $\cdot 6$; $\cdot 79$ by $\cdot 59$.

3. New South Wales, 28th Oct. Gould Coll.
(*Wilson*).

Sericornis humilis, *Gould*.

(Plate X. figs. 11 & 12.)

Sericornis humilis, *Gould, Handb. Birds Austr.* i. p. 356 (1865); *Sharpe, Cat. Birds B. M.* vii. p. 310 (1883); *North, Nests & Eggs Austr. Birds*, p. 130 (1889); *Nehrke. Kat. Eiersamml.* p. 57 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 251 (1901); *Sharpe, Hand-l.* iv. p. 222 (1903).

The eggs of the Brown Scrub-Warbler in the Collection are of an oval shape, but somewhat pointed at the broad end, and they possess a small amount of gloss. The ground-colour varies from pinkish white to pale brownish pink, and is marked with specks, lines, and streaks of purplish brown. In one specimen the markings form a dense confluent cap at the broad end; in two others the cap is very faintly indicated. Three examples measure respectively: $\cdot 9$ by $\cdot 62$; $\cdot 91$ by $\cdot 68$; $\cdot 98$ by $\cdot 68$.

Genus **SCOTOCERCA**, *Sundev.*

Scotocerca inquieta (*Cretzschm.*).

Scotocerca inquieta, *Barnes, Stray Feath.* ix. pp. 217, 455 (1880); *Sharpe, Cat. Birds B. M.* vii. p. 213 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 432 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 276 (1889); *Dresser, Birds Eur.* ix. (*Suppl.*) p. 99 (1895); *Nehr. Kat. Eiersamml.* p. 54 (1899); *Sharpe, Hand-l.* iv. p. 234 (1903.)

The eggs of the Streaked Scrub-Warbler are of a regular oval form and have a small amount of gloss. The ground-colour varies from white to pinkish white, and is rather densely marked with specks and small dots of bright chestnut and lilac-red. The markings are denser at the broad end, where they sometimes form a very irregular broad zone. When very closely examined, a few minute pale purple underlying specks may be discovered on the broader half of the shell. Specimens measure from .62 to .67 in length, and from .47 to .5 in breadth.

Scotocerca saharæ (*Loche*).

(Plate X. fig. 18.)

Drymoica striaticeps, *Tristram, Ibis*, 1859, p. 58.
Scotocerca saharæ, *Sharpe, Cat. Birds B. M.* vii. p. 214 (1883); *Dresser, Birds Eur.* ix. (*Suppl.*) p. 133 (1895); *Nehr. Kat. Eiersamml.* p. 55 (1899); *Sharpe, Hand-l.* iv. p. 234 (1903).

The eggs of the Algerian Scrub-Warbler are somewhat similar to those of *S. inquieta*, but they are characterized by the coarseness of their markings. These consist not only of specks and dots, but also of rather large blotches of deep chestnut. These are, moreover, in some examples, extremely dense at the broad end and form a more or less conspicuous and confluent cap or zone. Intermingled with the chestnut markings there are others of a pale purple colour. They measure from .62 to .66 in length, and from .44 to .5 in breadth.

Genus **NEORNIS**, *Blyth*.**Neornis flavo-olivacea**, *Blyth*.

(Plate X. fig. 20.)

- Cettia flavolivacea*, *Seebohm, Cat. Birds B. M. v.* p. 138 (1881); *Nehr. Kat. Eiersamml.* p. 34 (1899).
Neornis flavolivacea, *Oates, Fauna Brit. Ind., Birds*, i. p. 433 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 277 (1889); *Osmaston, Journ. Bomb. Nat. Hist. Soc.* xi. p. 470 (1898).
Neornis flavo-olivacea, *Sharpe, Hand-l.* iv. p. 235 (1903).

The eggs of the Olive-and-Yellow Warbler in the Collection, authenticated by Mr. Gammie, are of a blunt oval form, highly glossy, and of a deep chocolate-purple colour. They measure respectively: .67 by .54; .66 by .53; .67 by .52; .68 by .53.

Mr. Osmaston describes the eggs of this species as being "of an uniform—rather pale—terracotta, absolutely devoid of gloss."

Genus **SUYA**, *Hodgs.***Suya crinigera**, *Hodgs.*

Suya striata, *Swinhoe*, *Ibis*, 1863, p. 301.

Suya criniger, *Godw.-Aust. Journ. Asiat. Soc. Beng.* xl. pt. ii. p. 142 (1871).

Suya crinigera, *Sharpe, Cat. Birds B. M.* vii. p. 177 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 444 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 282 (1889); *Sharpe, Hand-l.* iv. p. 238 (1903).

The eggs of the Brown Hill-Warbler are typically of an elongated oval shape. The majority are highly glossy; some are nearly devoid of all gloss. They are white or cream-coloured, often tinged with pink, speckled and blotched with chestnut and pale grey. The markings at the broad end are generally dense and confluent, forming a well-defined zone at that part. Specimens measure from .65 to .75 in length, and from .46 to .55 in breadth.

Suya khasiana, *Godwin-Austen*.

(Plate X. fig. 21.)

Suya khasiana, *Godwin-Austen*, *Ann. & Mag. Nat. Hist.* (4) xviii. p. 412 (1876); *Sharpe, Cat. Birds B. M.* vii. p. 181 (1883); *Oates ed. Hume, Nests & Eggs Ind. Birds*, i. p. 286 (1889); *Sharpe, Hand-l.* iv. p. 239 (1903).

Two eggs of Godwin-Austen's Hill-Warbler are of a broad oval shape. The ground-colour is white with some gloss, thickly spotted and dotted with light red and underlying lilac towards the large end, and sparingly dotted with the same colours over the rest of the shell. They measure '65 in length, and from '49 to '5 in breadth.

Another somewhat larger egg is very similarly marked, but the ground-colour is pale sea-green. It measures '74 by '52.

Genus **PRINIA**, *Horsf.*

Prinia flavicans (*Vieill.*).

Drymoeca flavicans, *Ayres, Ibis*, 1869, p. 290; *Sharpe, ed. Layard's Birds S. Africa*, p. 254 (1875-84).

Drymoeca flavicans, *Andersson, Birds Damara-land*, p. 84 (1872).

Prinia flavicans, *Sharpe, Cat. Birds B. M.* vii. p. 186 (1883); *Nehrk. Kat. Eiersamml.* p. 54 (1899); *Stark & Selater, Fauna S. Africa, Birds*, ii. p. 136 (1901); *Sharpe, Hand-l.* iv. p. 240 (1903).

Two eggs of the Black-chested Wren-Warbler from Potchefstroom are of a broad oval shape and glossy. The ground-colour is pale bluish green, irregularly and somewhat sparingly blotched and spotted all over with chocolate-brown, pale brown, and underlying lavender markings. Two from Damara-land are similar, but the blotches are fewer and much larger and bolder, and there is a zone of scribbled lines round the larger end. They measure '58 to '65 in length, and '45 to '5 in breadth.

Prinia mystacea, Rüpp.

(Plate XI. fig. 1.)

Drymœca affinis, Sharpe, ed. *Layard's Birds S. Africa*, p. 258 (1875-84).

Prinia mystacea, Sharpe, *Cat. Birds B. M.* vii. p. 191 (1883); *Marshall, Ibis*, 1900, p. 231; *Nehrke. Kat. Eiersamml.* p. 54 (1899); *Stark & Selater, Fauna S. Africa, Birds*, ii. p. 135 (1901); *Sharpe, Hand-l.* iv. p. 240 (1903).

The eggs of the Tawny-flanked Wren-Warbler are of a regular oval form and glossy. The ground-colour is pale pinkish buff or pale blue or bluish white, spotted and blotched with pale brown and pinkish brown. Some specimens have a wreath of fine inter-twined lines round the broad end. The eggs of this species are quite intermediate between those of *P. inornata* and *P. blanfordi*, described below, having the ground-colours of the latter and the markings of the former. They measure from .57 to .69 in length, and from .43 to .48 in breadth.

Prinia inornata, Sylkes.

Prinia inornata, Sharpe, *Cat. Birds B. M.* vii. p. 194 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 452 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 301 (1889); *Sharpe, Hand-l.* iv. p. 240 (1903).

The eggs of the Indian Wren-Warbler are of a blunt oval form, sometimes approaching the spheroidal, and very glossy. They are thus described by Mr. Hume:—"The ground-colour is normally a beautiful pale greenish blue, most richly marked with various shades of deep chocolate and reddish brown. Nothing can exceed

the beauty or variety of the markings, which are a combination of bold blotches, clouds, and spots, with delicate, intricate interwoven lines recalling somewhat, but more elaborate and, I think, finer than, those of our old favourite—the Yellow Ammer. The markings are invariably most conspicuous at the large end, where there is very commonly a conspicuous confluent cap, and the delicate lines are almost without exception confined to the broader half of the egg.

“Very commonly the smaller end of the egg is entirely spotless, and I have a beautiful specimen now before me in which the only markings consist of a ring of delicate lines round the large end. Some idea of the delicacy and intricacy of these lines may be formed when I mention that this zone is barely one-tenth of an inch broad, and yet, in a good light, between twenty and thirty interlaced lines making up this zone may be counted.”

The eggs measure from .53 to .7 in length, and from .42 to .5 in breadth.

Prinia blanfordi (Wald.).

Prinia inornata (*nec Sykes*), *Sharpe, Cat. Birds B. M.* vii. p. 195, part. (1883).

Prinia blanfordi, *Oates, Fauna Brit. Ind., Birds*, i. p. 454 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 305 (1889); *Sharpe, Hand-l.* iv. p. 240 (1903).

The eggs of the Burmese Wren-Warbler differ from those of *P. inornata* in the colour of the ground, which in the majority of specimens is pale pinkish buff; in others pale blue or greenish white; and in others again a pale salmon-pink. The markings are of quite the same character in the eggs of the two species, but in those of the present bird they are always bolder and larger.

Ind. Birds, i. p. 299 (1889); *Sharpe*, *Hand-l.* iv. p. 241 (1903).

The eggs of the Jungle Wren-Warbler are of a rather elongate oval form and glossy. The ground-colour varies; in many specimens it is of a pale greenish-blue or greenish-white colour, in others, perhaps the majority, it is cream-coloured or very pale pinkish buff. It is usually very thickly freckled with reddish-brown, and the markings generally become excessively dense and form a well-defined zone round the broad end. In a few examples the markings are larger and more blotchy, but the zone at the large end is always present, as in the common type of egg. A series of specimens measure from .64 to .75 in length, and from .49 to .53 in breadth.

Prinia polychroa (*Temm.*).

(Plate XI. fig. 2.)

Suya polychroa, *Nicholson, Ibis*, 1881, p. 150.Prinia polychroa, *Sharpe, Cat. Birds B. M.* vii, p. 202 (1883); *Nehrk.**Kat. Eiersamml.* p. 54 (1899); *Sharpe, Hand-l.* iv. p. 241 (1903).

The egg of the Java Wren-Warbler in the Collection is of a blunt oval form and fairly glossy. It is of a very pale greenish-blue colour, marked at the broader end with a large cap of rich chestnut and with a few blotches of the same colour elsewhere. The cap is of very irregular shape and portions of it reach as far as the middle of the egg. This example measures .64 by .47.

1. Java, 25th April (*H. O. Forbes*). F. Nicholson, Esq. [P.].

Genus **BURNESIA**, *Jerd.***Burnesia flaviventris** (*Deless.*).Burnesia flaviventris, *Sharpe, Cat. Birds B. M.* vii. p. 204 (1883); *id. Hand-l.* iv. p. 241 (1903).Prinia flaviventris, *Oates, Fauna Brit. Ind., Birds*, i. p. 449 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 289 (1889); *Nehrk. Kat. Eiersamml.* p. 54 (1899).

The eggs of the Yellow-bellied Wren-Warbler are of a broad oval shape, approaching the spheroidal in many cases. They are highly glossy. They vary from a bright chestnut to a deep purplish-chestnut colour. Little of the ground-colour is ever visible in the eggs of this species, but when glimpses of it are to be seen it is found to be of a slightly paler colour than the markings. They measure from .52 to .6 in length, and from .43 to .48 in breadth.

The eggs of the Clamorous Wren-Warbler are of a broad oval form and very glossy. They are cream-coloured, densely streaked and mottled with bright chestnut. In many specimens about one-third of the ground-colour is visible, in others only one-fourth, and in a few the ground is completely covered and the egg is

uniform chestnut. They measure from .52 to .64 in length, and from .43 to .5 in breadth.

Prinia substriata, *Stark & Selater*, *Fauna S. Africa, Birds*, ii. p. 131 (1901).

The eggs of the White-breasted Wren-Warbler resemble those of typical *Prinia*. They vary in shape from a rather blunt to a long oval form and are highly glossed. The ground-colour is pale sea-green, sparingly blotched and spotted all over with chocolate-brown, reddish brown, and under-lying lavender markings. They measure from .6 to .68 in length, and .44 to .45 in breadth.

The eggs of the Ashy Wren-Warbler are of a somewhat pointed oval form and exceedingly glossy. They vary from brick-red to rich chestnut in colour, some being paler, some darker. The broad end of the egg is generally darker than the remainder of the shell, and exhibits a cap or zone. The eggs measure from .6 to .68 in length, and from .45 to .5 in breadth.

The eggs of the Streaked Wren-Warbler are of a somewhat broad oval form and fairly glossy. They are of a pinkish cream-colour, densely freckled with chestnut, especially round the broad end, where the markings form either a cap or a broad zone. Ten specimens measure from .57 to .6 in length, and .45 in breadth.

Burnesia lepida (Blyth).

- Burnesia lepida*, *A. Anderson, Ibis*, 1872, p. 237; *Sharpe, Cat. Birds B. M.* vii. p. 211 (1883); *id. Ibis*, 1891, p. 109; *Nehrke. Kat. Eiersamm.* p. 54 (1899); *Sharpe, Hand-l.* iv. p. 242 (1903).
Prinia lepida, *Oates, Fauna Brit. Ind., Birds*, i. p. 448 (1889); *id. ed. Hume, Nests & Eggs Indian Birds*, i. p. 287 (1889).

The eggs of the Indian Streaked Wren-Warbler are mostly of a short broad oval shape, and exhibit a considerable amount of gloss. The ground-colour varies from greenish white to pale greenish blue, and is very thickly freckled, streaked, and blotched with bright chestnut-brown. In many specimens the markings are more dense at the broad end than elsewhere, and form an ill-defined, irregular zone. The eggs, as remarked by Mr. Hume, are very similar in colour to those of the Common Blackbird. They measure from .48 to .59 in length, and from .4 to .45 in breadth.

Genus MALURUS, Vieill.**Malurus cyaneus (Ellis).**

- Malurus cyaneus*, *Thien, Fortpflanz. ges. Vög.* p. 161, tab. xix. fig. 1 (1845-54); *Gould, Handb. Birds Austr.* i. p. 317 (1865); *Sharpe, Cat. Birds B. M.* iv. p. 286 (1879); *North, Nests & Eggs Austr. Birds*, p. 112 (1889); *Nehrke. Kat. Eiersamm.* p. 28 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 163, pl. 8 (1901); *Sharpe, Hand-l.* iv. p. 243 (1903).

The eggs of the Blue Superb-Warbler are of a regular oval shape and nearly devoid of all gloss. They are of a white or pinkish-white colour, marked with chestnut and lilac-red. On some examples the markings are very minute, merely specks, evenly spread over the whole shell; on others they consist of confluent blotches at the broad end, forming a zone, and of small spots elsewhere; and on others, again, they consist of spots and small blotches, evenly distributed over the shell. Specimens measure from .64 to .71 in length, and from .48 to .53 in breadth.

Genus **BEBRORNIS**, *Sharpe*.

Bebrornis rodericanus (*E. Newton*).

(Plate XI. fig. 9.)

Bradypterus rodericanus, *Sharpe, Phil. Trans.* 168. p. 459 (1879).

Bebrornis rodericanus, *Sharpe, Cat. Birds B. M.* vii. p. 102 (1883); *id. Hand-l.* iv. p. 245 (1903).

An egg of the Rodriguez-Island Warbler in the Collection is oval in form and quite devoid of all gloss. It is white, spotted and blotched with umber-brown, greyish brown, and pale underlying lavender. The markings are dense on the broader half of the egg and rather sparse elsewhere. It measures .7 by .49.

1. Island of Rodriguez (*G. Gulliver: Transit of Venus Exped.*). Royal Society [P.].

Genus **SPHENURA**, *Licht.*

Sphenura longirostris (*Gould*).

(Plate XI. fig. 7.)

Sphenura longirostris, *Gould, Handb. Birds Austr.* i. p. 343 (1865); *Sharpe, Cat. Birds B. M.* vii. p. 105 (1883); *North, Nests & Eggs Austr. Birds*, p. 126, pl. viii. fig. 15 (1889); *Campbell, Nests & Eggs Austr. Birds*, i. p. 219 (1901); *Sharpe, Hand-l.* iv. p. 246 (1903).

The eggs of the Long-billed Bristle-bird are of a very broad oval form and possess a small amount of gloss. They are of a greyish-white colour, spotted and blotched with ashy brown and dark lavender-grey. The markings are of larger size at the broad end and more or less confluent, forming an ill-defined cap. Two examples measure respectively: .87 by .71; .91 by .72.

2. West Australia. Gould Coll.

Family **VIREONIDÆ**.

The eggs of all the Greenlets which are represented in the Collection are so similar to each other that it is useless attempting to describe them separately.

They are of a pointed oval shape, the smaller end being much compressed. The majority are without gloss; some have a faint trace of gloss, and a few might be termed moderately glossy.

They are white, speckled, almost entirely on the broad half of the egg, with dots and small spots of black or purplish brown, pinkish brown, and lavender. On some specimens the markings are

extremely fine and delicate, on others they attain the dimensions of small blotches. Sometimes the markings on a specimen are all of one colour; more frequently they are of two of the colours noted above, rarely of all three colours.

Genus **VIREO**, Vieill.

Vireo calidris (Linn.).

Vireo calidris, *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 186 (1881); *Gadow, Cat. Birds B. M.* viii. p. 293 (1883); *Nehr. Kat. Eiersamml.* p. 73 (1899); *Sharpe, Hand-l.* iv. p. 247 (1903).

Vireosylva altiloqua, *A. & E. Newton, Ibis*, 1859, p. 145.

The eggs of the Long-billed Greenlet measure from .8 to .9 in length, and from .59 to .61 in breadth.

Family AMPELIDÆ.

Genus **AMPELIS**, *Linn.*

Ampelis garrulus, *Linn.*

Bombycilla garrula, *Baedecker, Eier Eur. Vög.* tab. 52. fig. 20 (1855-63); *Wolley, P. Z. S.* 1857, p. 55, *Aves*, pl. cxxii.; *von Nordm. J. f. O.* 1858, p. 307, 1859, taf. i. figs. *a*, *b*; *Wheelwright, A Spring and Summer in Lapland*, p. 279 (1871).

Ampelis garrulus, *Newton, Ibis*, 1861, p. 92, pl. iv.; *Dresser, Birds Eur.* iii. p. 429 (1873); *Seebohm, Brit. Birds*, ii. p. 3, pl. 11 (1884); *Sharpe, Cat. Birds B. M.* x. p. 212 (1885); *Seebohm, Eggs of Brit. Birds*, p. 233, pl. 54. fig. 19 (1896); *Wolley & Newton, Ootheca Wolleyana*, pt. ii. p. 212, pl. x. (1902); *Sharpe, Hand-l.* iv. p. 259 (1903).

Eggs of the Waxwing are of a regular oval shape, but some specimens have the smaller end compressed and pointed. They have a moderate amount of gloss. They are greyish blue, sometimes with an olive tinge, very distinctly spotted all over with black or deep blackish brown and underlying lavender-grey. Some of the darker spots have their edges blurred and running into the surrounding ground-colour. The markings, in all the examples in the Collection, are remarkably evenly spread over the whole shell and there is never any tendency for them to form a cap at the broad end of the egg. Specimens measure from $\cdot 86$ to $1\cdot 02$ in length, and from $\cdot 65$ to $\cdot 7$ in breadth.

Family ARTAMIDÆ.

Genus *ARTAMUS*, *Vieill.*

Artamus leucogaster (*Valenc.*).

Artamus leucopygialis, *Gould, Handb. Birds Austr.* i. p. 154 (1865).

Artamus leucorhynchus, *Sharpe, P. Z. S.* 1879, p. 345.

Artamus leucogaster, *North, Nests & Eggs Austr. Birds*, p. 43 (1889); *Oates ed. Hume, Nests & Eggs Ind. Birds*, i. p. 353 (1889); *Sharpe, Cat. Birds B. M.* xiii. p. 3 (1890); *Nehrke. Kat. Eiersamml.* p. 119 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 461, pl. 15 (1901); *Sharpe, Hand-l.* iv. p. 260 (1903).

Artamus leucorhynchus, *Sharpe, Ibis*, 1889, p. 433.

Eggs of the White-rumped Swallow-Shrike are mostly of a regular oval form and possess a slight amount of gloss. They are cream-

coloured, spotted and blotched with rusty brown or pale chestnut and underlying lavender-grey. The markings are generally clustered round the broad end of the egg and form a strongly-marked but irregular zone or wreath. Specimens measure from .85 to .95 in length, and from .64 to .69 in breadth.

Artamus mentalis, *Jard.*

(Plate XI. fig. 13.)

Artamus mentalis, *Finsch & Hartl. Faun. Centralpolyn.* p. 84, tab. i. fig. 5 (1867); *Layard, P. Z. S.* 1875, p. 434; *Sharpe, Cat. Birds B. M.* xiii. p. 9 (1890); *Nehr. Kat. Eiersamml.* p. 119, taf. iii. fig. 32 (1899); *Sharpe, Hand-l.* iv. p. 261 (1903).

An egg of the Black-throated Swallow-Shrike in the Collection is of a regular oval form and almost devoid of gloss. The ground-colour is creamy white, spotted and blotched with rusty brown and lavender-grey, the markings being mostly confined to a zone round the larger end. It measures .75 in length, and .59 in breadth.

- | | |
|--|------------------|
| 1. Fiji Islands (<i>Tristram Coll.</i>). | Crowley Bequest. |
|--|------------------|

Artamus fuscus, *Vieill.*

(Plate XI. fig. 10.)

Artamus fuscus, *Legge, Birds Ceylon*, p. 666 (1879); *Oates, Fauna Brit. Ind., Birds*, i. p. 498 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 350 (1889); *Sharpe, Cat. Birds B. M.* xiii. p. 11 (1890); *Nehr. Kat. Eiersamml.* p. 120 (1899); *Sharpe, Hand-l.* iv. p. 261 (1903).

The eggs of the Ashy Swallow-Shrike are not generally separable from those of *A. leucogaster*, but they appear to be more varied. In some specimens, for instance, the markings are almost entirely of a lavender colour, and in others they are similarly of a rusty brown or pale chestnut colour. They measure from .81 to .98 in length, and from .6 to .71 in breadth.

Artamus hypoleucus, Sharpe.

(Plate XI. fig. 16.)

- Artamus albiventris*, Gould, *Handb. Birds Austr.* i. p. 149 (1865); *North, Nests & Eggs Austr. Birds*, p. 45 (1889).
Artamus hypoleucus, Sharpe, *Cat. Birds B. M.* xiii. p. 17 (1890); *Nehrke. Kat. Eiersamml.* p. 120 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 470 (1901); *Sharpe, Hand-l.* iv. p. 261 (1903).

The eggs of the White-bellied Swallow-Shrike do not appear to differ from those of *A. melanops* described below. Three examples measure respectively: .9 by .66; .92 by .67; .85 by .66.

3. Dawson River, Queensland, 6th Nov. Crowley Bequest.
(*North Coll.*).

Artamus melanops, Gould.

- Artamus melanops*, Gould, *Handb. Birds Austr.* i. p. 149 (1865); *North, Nests & Eggs Austr. Birds*, p. 46, pl. viii. fig. 13 (1889); *Sharpe, Cat. Birds B. M.* xiii. p. 17 (1890); *Le Souëf, Vict. Nat.* xvi. p. 69 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 471 (1901); *Sharpe, Hand-l.* iv. p. 262 (1903).

The eggs of the Black-faced Swallow-Shrike are of a regular oval shape and moderately glossy. They are of a creamy-white colour, sometimes faintly tinged with pink, spotted and blotched with umber-brown and lavender. The markings extend over the whole shell, but they are more numerous round the broad end of the egg, where they are more or less confluent and form a wreath. Specimens measure from .82 to .9 in length, and from .62 to .7 in breadth.

Artamus sordidus (Lath.).

Artamus sordidus, *Gould, Handb. Birds Austr.* i. p. 143 (1865); *North, Nests & Eggs Austr. Birds*, p. 42, pl. viii. fig. 14 (1889); *Sharpe, Cat. Birds B. M.* xiii. p. 19 (1890); *Nehrk. Kat. Eiersamml.* p. 120 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 471, pl. 15 (1901); *Sharpe, Hand-l.* iv. p. 262.

The eggs of the Common Australian Wood-Swallow are mostly of a broad, pointed, oval shape and slightly glossy. They are cream-colour or pale stone-colour, spotted and blotched with deep umber-brown and dark lavender-grey. The markings usually form a broad but very irregular zone round the broad end and are very sparse elsewhere. Specimens measure from .82 to .93 in length, and from .64 to .7 in breadth.

Artamus minor, Vieill.

Artamus minor, *Gould, Handb. Birds Austr.* i. p. 146 (1865); *Ramsay, Proc. Linn. Soc. N.S.W.* vii. p. 407, pl. 3. figs. 9, 10 (1882); *North, Nests & Eggs Austr. Birds*, p. 47 (1889); *Sharpe, Cat. Birds B. M.* xiii. p. 20 (1890); *Nehrk. Kat. Eiersamml.* p. 120 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 474 (1901); *Sharpe, Hand-l.* iv. p. 262 (1903).

The eggs of the Little Swallow-Shrike are of a rather broad oval form and moderately glossy. They are of a white or creamy-white colour, spotted and blotched, most densely at the broad end, with pale umber-brown and lavender. Six examples measure from .67 to .76 in length, and from .51 to .59 in breadth.

Genus **VANGA**, *Vieill.***Vanga curvirostris** (*Gmel.*).

(Plate XI. fig. 18.)

Vanga curvirostris, *Newton, Ibis*, 1863, p. 348; *Cowan, Proc. R. Phys. Soc. Edinb.* vii. p. 148 (1882); *Gadow, Cat. Birds B. M.* viii. p. 104 (1883); *Milne-Edwards & Grandidier, Hist. Nat. Madag., Ois.* ii. p. 423, pl. 304. fig. 5; *Sharpe, Hand-l.* iv. p. 263 (1903).

The eggs of the Hook-billed Shrike are of an oval shape and slightly glossy. They are of a pinkish cream-colour, much spotted with chestnut or reddish brown and underlying lilac-grey. The markings are coarser, more numerous, and often confluent at the broad end. Examples measure from 1.02 to 1.2 in length, and from .79 to .83 in breadth.

Family PRIONOPIDÆ.

Genus GRALLINA, Vieill.

Grallina picata (Lath.).*Grallina australis*, Thien. *Fortpflanz. ges. Vög.* tab. xxvii. fig. 2, a, b (1845-54).*Grallina picata*, Gould, *Handb. Birds Austr.* i. p. 188 (1865); Sharpe, *Cat. Birds B. M.* iii. p. 272 (1877); North, *Nests & Eggs Austr. Birds*, p. 79, pl. viii. fig. 12 (1889); Le Souëf, *Vict. Nat.* xvi. p. 63 (1899); id. *Knowledge*, xxiii. p. 92 (1900); id. *Ibis*, 1901, p. 135; Campbell, *Nests & Eggs Austr. Birds*, i. p. 87, pl. 6 (1901); Sharpe, *Hand-l.* iv. p. 264 (1903).

The eggs of the Magpie-Shrike are usually of a narrow oval shape, but some are broad and somewhat pyriform. They are moderately glossy. The ground varies from cream-colour or pinkish white to salmon-pink, and is marked, almost entirely at the broad end in the form of a cap or broad zone, with more or less confluent blotches, spots, and clouds of purplish red, reddish brown, and violet-grey. The smaller half of the egg is usually only sparingly speckled. Specimens measure from 1.03 to 1.2 in length, and from .79 to .89 in breadth.

Genus HEMIPUS, Hodgs.

Hemipus picatus (Sykes).

(Plate XI. fig. 20.)

Hemipus picatus, Sharpe, *Cat. Birds B. M.* iii. p. 307 (1877); Oates, *Fauna Brit. Ind., Birds*, i. p. 471 (1889); id. ed. Hume, *Nests & Eggs Ind. Birds*, i. p. 327 (1889); Nehrk. *Kat. Eiersamml.* p. 22 (1899); Sharpe, *Hand-l.* iv. p. 264 (1903).

Two eggs of the Black-backed Pied Shrike are of a narrow oval form and nearly devoid of gloss. They are greenish or greyish white, profusely blotched, spotted, and streaked with two shades of umber-brown and with lavender. In one example the markings

become confluent and form a broad zone round the broad end, in the other they form a similar zone round the smaller end. They measure respectively: .7 by .5; .7 by .49.

2. Nilghiri Hills, South India, March Hume Coll.
(*W. Davison*).

Hemipus capitalis (*McClell.*).

(Plate XI. fig. 19.)

Hemipus capitalis, *Sharpe, Cat. Birds B. M.* iii. p. 306 (1877); *Oates, Fauna Brit. Ind., Birds*, i. p. 472 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 328 (1889); *Sharpe, Hand-l.* iv. p. 265 (1903).

Three eggs of the Brown-backed Pied Shrike in the Collection are of a regular oval shape and slightly glossy. They are pale greenish white, rather thickly mottled all over, but most densely at the broad end, with pinkish brown and lavender. A fourth specimen is spheroidal in shape and perfectly devoid of gloss. It is greenish white, profusely speckled and mottled all over with two shades of brown and slaty grey. They measure respectively: .65 by .5; .68 by .51; .66 by .5; .6 by .53.

3. Mussoorie, Himalayas (*T. Hutton*). Hume Coll.
1. Sikkim, 4th May (*J. Gammie*). Hume Coll.

Genus **TEPHRODORNIS**, *Swains.*

Tephrodornis pondicerianus (*Gmel.*).

(Plate XII. figs. 1 & 4.)

Tephrodornis pondicerianus, *Beavan, Ibis*, 1865, p. 418; *Sharpe, Cat. Birds B. M.* iii. p. 275 (1877); *Oates, Fauna Brit. Ind., Birds*, i. p. 475 (1889); *id. ed. Hume, Nests & Eggs Ind. B.* i. p. 332 (1889); *Nehrke, Kat. Eiersamml.* p. 21 (1899); *Sharpe, Hand-l.* iv. p. 265 (1903).

The eggs of the Common Wood-Shrike vary in shape from broad oval to elliptical and exhibit but little gloss. They are white or cream-coloured, occasionally tinged with green, spotted and blotched with umber-brown and deep lavender-grey. On some specimens the markings are very dense at the broad end, where they form a cap; on the others they are smaller and paler, equally distributed over the entire surface. In two examples in the Collection the markings are almost wholly confined to a broad belt round the middle of the egg. Specimens measure from .72 to .8 in length, and from .58 to .62 in breadth.

Tephrodornis pelvica (Hodgs.).

(Plate XI. fig. 14.)

Tephrodornis pelvica, *Sharpe, Cat. Birds B. M.* iii. p. 276 (1877); *Oates, Fauna Brit. Ind., Birds*, i. p. 473 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 330 (1889); *Sharpe, Hand-l. B.* iv. p. 265 (1903).

Two eggs of the Nepal Wood-Shrike in the Collection, taken by Mr. Gammie, are broad ovals in shape and almost devoid of gloss. They are dull white, profusely speckled and spotted with yellowish brown and lavender-grey. They measure respectively: .91 by .74; .95 by .72. A third example, extracted by Davison from the oviduct of a female, is also a broad oval in shape and devoid of gloss. It is greenish white, boldly blotched and spotted with inky-purple and two shades of umber-brown. The markings are more numerous at the broad end than elsewhere. It measures .83 by .68.

Genus **COLLYRIOCICHLA**, *Vig. & Horsf.*

The eggs of the Shrike-Thrushes represented in the Collection resemble each other so closely that they may all be described in the same terms. They are oval in shape and moderately glossy. The ground-colour is white or cream-coloured, occasionally tinged with grey, blotched with olive-brown or umber-brown and dull lavender or slate-colour. The markings are sometimes evenly distributed over the whole shell, but more frequently they are dense over the broad end, and sparse or nearly absent in the smaller half. The eggs of the different species vary somewhat in size.

Family LANIIDÆ.

Genus GYMNORHINA, Gray.

Gymnorhina tibicen (Lath.).

Barita tibicen, Thien. *Fortpflanz. ges. Vög.* tab. xxxviii. fig. 12, *a, b* (1845-54).

Gymnorhina tibicen, Gould, *Handb. Birds Austr.* i. p. 175 (1865); Ramsay, *Ibis*, 1865, p. 300; Gadow, *Cat. Birds B. M.* viii. p. 91 (1883); North, *Nests & Eggs Austr. Birds*, p. 58, pl. vii. figs. 4, 5, 6 (1889); Nehrke, *Kat. Eiersamml.* p. 68 (1899); Campbell, *Nests & Eggs Austr. Birds*, i. p. 290 (1901); Sharpe, *Hand-l.* iv. p. 276 (1903).

The eggs of the Piping Crow-Shrike vary from an oval to an ellipsoid shape, are very glossy, and vary greatly in size and colour. Mr. Ramsay (*l. c.*) has described seven types of the eggs of this species.

The Collection contains eggs of the following types:—Very pale blue, thickly mottled, blotched, and lined with chestnut-brown and lavender; bluish white, densely blotched with lilac and covered with lines and streaks of pale reddish brown; bluish white, blotched with lilac-grey and wood-brown in large confluent masses; bluish grey, marked with distinct roundish spots and blotches of ink-purple and chocolate-brown, the edges of these being much blurred and running into the surrounding ground-colour; brownish buff, rather densely mottled with dark lavender and pale brown. They measure from 1·35 to 1·7 in length, and from 1 to 1·12 in breadth.

Gymnorhina hyperleuca (Gould).

Gymnorhina organicum, *Gould, Handb. Birds Austr.* i. p. 178 (1865); *North, Nests & Eggs Austr. Birds*, p. 60, pl. vii. fig. 9 (1889).

Gymnorhina leuconota, *Gadow, Cat. Birds B. M.* viii. p. 92, part. (1883).

Gymnorhina hyperleuca, *Campbell, Nests & Eggs Austr. Birds*, i. p. 295 (1901); *Sharpe, Hand-l.* iv. p. 276 (1903).

The eggs of the Tasmanian Crow-Shrike are smaller than those of *G. tibicen* and *G. leuconota*, and more uniform in colouring. The commonest type of egg appears to be one in which the ground-colour is pale greyish green, sparingly spotted and blotched with dull purplish grey and brown or dark umber-brown. The edges of the markings are usually hazy and run into the surrounding ground-colour. In a second type, the ground-colour is dull bluish green, densely clouded and mottled with dull lavender and two or more shades of brown. Specimens measure from 1.4 to 1.52 in length, and from 1 to 1.1 in breadth.

Genus **CRACTICUS**.**Cracticus quoyi** (Less.).

(Plate XII. fig. 10.)

Cracticus quoyi, Gould, *Handb. Birds Austr.* i. p. 183 (1865); *Gadow, Cat. Birds B. M.* viii. p. 94 (1883); *Meyer, Zeitschr. ges. Orn.* 1884, p. 283, taf. xviii. figs. 2-4; *Nehrk. Kat. Eiersamml.* p. 69 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 299, pl. 12 (1901); *Sharpe, Hand-l.* iv. p. 276 (1903).

Of the two eggs of the Black Crow-Shrike in the Collection, one is of a narrow oval shape, and the other is a broad ellipse. Both are moderately glossy. They are of a pale cream *café-au-lait* colour, with a tinge of green, spotted, almost entirely at the broad end, with pale olive-brown and dull lavender. They measure respectively: 1.45 by 1; 1.3 by 1.

2. Cape York, North Australia.

Gould Coll.

Cracticus nigrigularis (Gould).

Cracticus nigrigularis, Gould, *Handb. Birds Austr.* i. p. 180 (1865); *Gadow, Cat. Birds B. M.* viii. p. 95 (1883); *Nehrk. Kat. Eiersamml.* p. 69 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 301, pl. 12 (1901); *Sharpe, Hand-l.* iv. p. 277 (1903).

Cracticus robustus, North, *Nests & Eggs Austr. Birds*, p. 62, pl. ix. fig. 8 (1889).

The eggs of the Black-throated Crow-Shrike are of a regular oval shape and glossy. They vary from olive-grey to buff or stone-colour and are spotted, chiefly in the form of a cloudy zone or cap at the broad end, with umber-brown and brownish pink. There are also a few black specks scattered over the shell. They measure from 1.18 to 1.33 in length, and from .9 to .98 in breadth.

1. New South Wales.

Cracticus cassicus (Bodd.).

(Plate XII. fig. 9.)

Cracticus cassicus, Gadow, *Cat. Birds B. M.* viii. p. 97 (1883); *Meyer, Zeitschr. ges. Orn.* 1884, p. 283, taf. xviii. fig. 1; *Nehrk. Kat. Eiersamml.* p. 69 (1899); *Sharpe, Hand-l.* iv. p. 277 (1903).

The eggs of the New-Guinea Crow-Shrike in the Collection are of a pointed oval shape, glossy, and of a greyish-green colour, faintly clouded, round the broad end with very pale brown and spotted here and there with dark umber-brown. They measure respectively: 1.36 by .98; 1.4 by .98.

2. Fergusson Island, New Guinea,
1st Dec. (A. S. Meek).

Crowley Bequest.

Cracticus leucopterus, Gould.

(Plate XII. fig. 11.)

Cracticus leucopterus, *Gould, Handb. Birds Austr.* i. p. 187 (1865); *Gadow, Cat. Birds B. M.* viii. p. 98 (1883); *Nehrke, Kat. Eiersamml.* p. 69 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 303 (1901); *Sharpe, Hand-l.* iv. p. 277 (1903).

The eggs of the White-winged Crow-Shrike in the Collection are of a rather broad oval form and glossy. They are pale greenish grey, blotched and clouded at the broad end, sparingly spotted elsewhere, with reddish brown, lilac-red, and pale purplish-brown. A black speck may be detected here and there on the shell. Three examples measure respectively: 1.2 by .85; 1.2 by .92; 1.2 by .93.

1. Swan River, W. Australia, Nov. Crowley Bequest.

Cracticus destructor (Temm.).

Vanga destructor, *Thien. Fortpflanz. ges. Vög.* tab. xxx. fig. 19, *a, b* (1845-54).

Cracticus torquatus, *Gould, Handb. Birds Austr.* i. p. 184 (1865); *North, Nests & Eggs Austr. Birds*, p. 61 (1889).

Cracticus destructor, *Gadow, Cat. Birds B. M.* viii. p. 100 (1883); *Nehrke, Kat. Eiersamml.* p. 69 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 304, pl. 12 (1901); *Sharpe, Hand-l.* iv. p. 277 (1903).

The eggs of the Collared Crow-Shrike are of an oval shape and exhibit a considerable amount of gloss. They are very variable in colour. The ground-colour in some eggs is olive-grey, in others pale buff, and in others again olive or olive-buff. The markings generally form a zone or cap at the broad end and consist of specks, spots, blotches, and smears of deep purplish red, reddish brown, umber-brown, and underlying lavender or lilac-grey. Specimens measure from 1.17 to 1.25 in length, and from .87 to .92 in breadth.

Genus LANIUS, Linn.**Lanius minor, Gm.**

Lanius minor, *Thien. Fortpflanz. ges. Vög.* p. 324, tab. xxxi. fig. 4, a-d (1845-54); *Baedecker, Eier Eur. Vög.* tab. 52. fig. 4 (1855-63); *Bree, Birds Eur.* i. p. 165, pl. (1866); *Dresser, Birds Eur.* iii. p. 393 (1872); *Gadow, Cat. Birds B. M.* viii. p. 235 (1883); *Seeböhm, Brit. Birds*, i. p. 603, pl. 11 (1883); *id. Eggs of Brit. Birds*, p. 220, pl. 54. fig. 12 (1896); *Sharpe, Hand-l.* iv. p. 279 (1903).

The eggs of the Lesser Grey Shrike are of an ordinary oval form and moderately glossy. They are very uniform in tint, the ground-colour being of a greyish-green, spotted and blotched, chiefly on the broader half of the egg, with olive-brown and lavender. The markings generally form an irregular zone or cap at the broad end. Specimens measure from .91 to .98 in length, and from .68 to .75 in breadth.

Lanius excubitor, Linn.

Lanius excubitor, *Thien. Fortpflanz. ges. Vög.* p. 322, tab. xxxi. fig. 1, *a-d* (1845-54); *Baedeker, Eier Eur. Vög.* tab. 52. fig. 1 (1855-63); *Hewitson, Eggs of Brit. Birds*, i. p. 69, pl. xx. fig. i (1856); *Dresser, Birds Eur.* iii. p. 375 (1871); *Gadow, Cat. Birds B. M.* viii. p. 237 (1883); *Seebohm, Brit. Birds*, i. p. 598, pl. 11 (1883); *id. Eggs of Brit. Birds*, p. 220, pl. 54. fig. 9 (1896); *Sharpe, Hand-l.* iv. p. 280 (1903).

Eggs of the Great Grey Shrike are of a regular oval shape, and while some possess a slight amount of gloss, others are entirely devoid of it. The ground-colour varies from greyish white to an extremely light greenish white, and is thickly marked with spots and blotches of brown of different shades and underlying pale purplish grey. In the majority of specimens the markings are confluent at the larger end and form a large cap or an irregular zone. In other examples the markings are small, comparatively well-defined and distinct and fairly evenly distributed over the entire shell. Examples measure from 1 to 1.15 in length, and from .75 to .79 in breadth.

Lanius lahtora (Sykes).

Lanius lahtora, Dresser, *Birds Eur.* iii. p. 381 (1872); Gadow, *Cat. Birds B. M.* viii. p. 252 (1883); Oates, *Fauna Brit. Ind., Birds*, i. p. 459 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 306 (1889); Sharpe, *Hand-l.* iv. p. 281 (1903).

The eggs of the Indian Grey Shrike show much variation in shape, size, colour, and extent and disposition of markings, but the majority do not differ from the eggs of *L. excubitor*. The ground is cream-colour, stone-colour, or pale greenish white, and the markings are of many shades of brown, tinged with yellow, rufous or olive, and underlying pale purple. In many specimens the markings consist of blotches chiefly disposed over the larger end and frequently forming an irregular zone or cap; in others they consist of mere spots and specks, spread over the entire shell, but more thickly over the larger half than elsewhere. They vary from .9 to 1.15 in length, and from .75 to .82 in breadth.

Lanius meridionalis, Temm.

Lanius meridionalis, *Thien, Fortpflanz. ges. Vög.* p. 323, tab. xxxi. fig. 3, *a, b* (1845-54); *Baedeker, Eier Eur. Vög.* tab. 52, fig. 3 (1855-63); *Dresser, Birds Eur.* iii. p. 387 (1871); *Saunders, Ibis*, 1871, p. 206; *Bree, Birds Eur.* 2nd ed. ii. p. 18, pl. (1875); *Gadow, Cat. Birds B. M.* viii. p. 246 (1883); *Nehrk. Kat. Eiersamml.* p. 72 (1899); *Sharpe, Hand-l.* iv. p. 282 (1903).

The eggs of the Southern Grey Shrike are of quite the same type as those of *L. excubitor*. Many specimens are inseparable from the eggs of that species, but others are more richly marked, the brown being of a deeper tint, and the markings being more numerous, and consequently covering more of the ground. Examples measure from 1 to 1·15 in length, and from ·75 to ·8 in breadth.

Phoneus nubicus, *Sharpe, Hand-l.* iv. p. 283 (1903).

The eggs of the Masked Shrike are mostly of a pointed oval form and possess a fair amount of gloss. They are of a creamy-buff colour, usually marked with well-defined spots and blotches of brown or yellowish brown and lavender. These are chiefly distributed over the larger half of the egg, and often form an irregular zone, but they are not so streaky in character as in the eggs of most other Shrikes. They measure from ·77 to ·87 in length, and from ·59 to ·68 in breadth.

Lanius auriculatus, *Dresser, Birds Eur.* iii. p. 407 (1871); *Saunders, Ibis*, 1871, p. 207; *Gadow, Cat. Birds B. M.* viii. p. 283 (1883).

Lanius pomeranus, *Whitehead, Ibis*, 1885, p. 37.

Phœneus pomeranus, *Sharpe, Hand-l.* iv. p. 283 (1903).

The eggs of the Woodchat-Shrike are normally of a pointed oval shape, in some cases the smaller end being blunt and rounded. Many eggs possess a fair amount of gloss, some are entirely without it.

They are exceedingly variable in colour and form. Of the many types to be found, the following may be enumerated:—Ground-colour of some shade of green, varying from the palest greenish white to a clear but pale green, marked with olive-brown or yellowish brown and lavender. Ground-colour greyish white, marked with pale brown, or rarely with dark chocolate-brown, and violet-grey. Ground-colour varying from cream-colour to pale buff, marked with various shades of brown and dark grey. Ground-colour pinkish cream-colour, marked with pale red and purplish grey. Ground-colour salmon-pink, marked with chestnut and purplish grey.

As in almost all eggs of the Shrikes, the tendency of the markings is to form a broad zone round the larger end, the remainder of the shell being very sparingly spotted. The specks and blotches forming this zone are sometimes distinct, but more frequently confluent.

The eggs vary in size from .81 to 1 in length, and from .61 to .71 in breadth.

Genus **FISCUS**, Bonap.**Fiscus humeralis** (Stanley).

(Plate XII. fig. 13.)

Lanius humeralis, *Gadow, Cat. Birds B. M.* viii. p. 255 (1883); *Grant, Nov. Zool.* ix. p. 466 (1902).

Fiscus humeralis, *Sharpe, Hand-l.* iv. p. 284 (1903).

Four eggs of the Eastern Fiscal Shrike differ somewhat in shape and vary from a broad oval to a somewhat pointed oval. All have the ground-colour greenish white, spotted and marked with pale rusty brown and larger underlying markings of lavender-grey, which are mostly clustered so as to form a wide irregular band round the larger end. In two of the eggs, the markings are much stronger and deeper in colour, while in the fourth they are comparatively faint. The eggs measure from .85 to .9 in length, and .6 to .68 in breadth.

4. Harrar, S. Abyssinia, June.

Mr. Zaphiro [C.].

Fiscus collaris (Linn.).

Lanius collaris, *Thien. Fortpflanz. ges. Vög.* p. 325, tab. xxxi. fig. 6 (1845-54); *Sharpe, ed. Layard's Birds S. Africa*, p. 374 (1875-84); *Gadow, Cat. Birds B. M.* viii. p. 255 (1883); *Nehrk. Kat. Eiersamml.* p. 72 (1899); *Haagner, Ibis*, 1901, p. 15; *Stark & Selater, Fauna S. Africa, Birds*, ii. p. 6 (1901).

Fiscus collaris, *Ayres, Ibis*, 1876, p. 429; *Sharpe, Hand-l.* iv. p. 284 (1893).

The eggs of the Fiscal Shrike vary in shape from a narrow pointed, to a broad blunt, oval, and they are devoid of gloss. The ground is of a pale greyish-white colour in some specimens, cream-coloured in others, marked, chiefly on the larger half, with blotches, streaks, and spots of pale brown and underlying lavender. As in the eggs of other Shrikes, the markings are often confluent round the larger end and form a broad zone, and less frequently an irregular cap. Examples measure from .9 to 1.12 in length, and from .68 to .73 in breadth.

4. Leeuwspruit, O.R.C., 10th Sept.

Capt. G. E. H. Barrett-Hamilton [P.].

Fiscus excubitorius (*Prév. & Des Murs*).

(Plate XII. fig. 12.)

Lanius excubitorius, *Heugl. Orn. N.O.-Afr.* i. p. 478 (1873); *Gadow, Cat. Birds, B. M.* viii. p. 253 (1883).

Fiscus excubitorius, *Sharpe, Hand-l.* iv. p. 285 (1903).

The eggs of the African Grey Shrike are not to be separated from those of *Phoneus nubicus*, described above (p. 279), except by their superior size. Three examples measure respectively: .96 by .73; .96 by .72; .9 by .72.

3. Near Fashoda, White Nile, 11th April. R. McD. Hawker, Esq. [P.].

Fiscus caudatus (*Cab.*).

(Plate XIII. fig. 2.)

Lanius caudatus, *Gadow, Cat. Birds B. M.* viii. p. 254 (1883); *Nehrk. Kat. Eiersamml.* p. 72 (1889).

Fiscus caudatus, *Sharpe, Hand-l.* iv. p. 285 (1903).

An egg of the Long-tailed Shrike is of a broad oval shape, somewhat pointed towards the smaller end, and slightly glossed. The ground-colour is creamy white, indistinctly spotted and blotched round the larger end with yellowish brown and pale lavender-grey. It measures .95 in length by .75 in breadth.

1. [East Africa.] Crowley Bequest.

Genus **ENNEOCTONUS**, *Bonap.***Enneoctonus collurio** (*Linn.*).

Lanius collurio, *Thien. Fortpflanz. ges. Vög.* p. 328, tab. xxxi. fig. 9, a-f (1845-54); *Hewitson, Eggs of Brit. Birds*, i. p. 70, pl. xx. figs. iii & iv (1856); *Dresser, Birds Eur.* iii. p. 399 (1871); *Gadow, Cat. Birds B. M.* viii. p. 286 (1883); *Seeböhm, Brit. Birds*, i. p. 606, pl. 11 (1883); *id. Eggs of Brit. Birds*, p. 221, pl. 54. figs. 10 & 11 (1896).

Enneoctonus collurio, *Baedeker, Eier Eur. Vög.* tab. 52. fig. 6 (1855-63); *Sharpe, Hand-l.* iv. p. 285 (1903).

The eggs of the Red-backed Shrike pass through the same variations as those of the Woodchat-Shrike, but examples with the ground pinkish cream-colour or salmon-pink appear to be the commonest. Next in order of frequency come those eggs in which the ground is tinged, in varying degrees, with green, and lastly those in which the ground is greyish white, cream-colour or buff.

The eggs of the Red-backed Shrike measure from .8 to .95 in length, and from .6 to .71 in breadth.

Genus **CEPHALOPHONEUS**, *Fitz.***Cephalophoneus bucephalus (Temm. & Schl.).**

(Plate XII. fig. 18.)

Lanius bucephalus, *Gadow, Cat. Birds B. M.* viii. p. 270 (1883); *Seebohm, Birds Japan. Emp.* p. 106 (1890); *Nehrke, Kat. Eiersamml.* p. 72 (1899).

Cephalophoneus bucephalus, *Sharpe, Hand-l.* iv. p. 286 (1903).

The eggs of the Bull-headed Shrike are of a somewhat elongated, pointed oval form and devoid of gloss. They are of a greenish

cream-colour, spotted and blotched with pale reddish brown or brown and lavender. The markings generally form a broad but very irregular zone round the larger end, and are rather scanty on the smaller half of the egg. Examples measure from .89 to 1 in length, and from .62 to .68 in breadth.

Cephalophoneus tephronotus (*Vig.*).

Lanius tephronotus, *Gadow, Cat. Birds B. M.* viii. p. 260 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 465 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 325 (1889); *Hartert, Nov. Zool.* i. p. 673 (1894); *Nehrke, Kat. Eiersamml.* p. 72 (1899).

Cephalophoneus tephronotus, *Sharpe, Hand-l.* iv. p. 287 (1903).

The eggs of the Grey-backed Shrike in the Collection are of two types of coloration. In one, they are of a greenish-white colour, blotched and spotted with pale olive-brown and lavender. Four examples of this type measure respectively: 1 by .75; 1 by .74; .97 by .75; .95 by .77. In a second type, the eggs are of a pinkish-white colour, blotched and spotted with salmon-pink and lilac. The average dimensions of five examples of this type are 1.03 by .71. These are of a somewhat narrow oval shape and glossy, whereas those of the first type are of a broad oval form and exhibit but a small trace of gloss.

Cephalophoneus erythronotus (*Vig.*).

Lanius erythronotus, *Wardlaw-Ramsay, Ibis*, 1880, p. 52; *Gadow, tom. cit.* p. 263; *Oates, Fauna Brit. Ind., Birds*, i. p. 464 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 318 (1889).

Cephalophoneus erythronotus, *Sharpe, Hand-l.* iv. p. 287 (1903).

The eggs of the Indian Rufous-backed Shrike are so similar to those of *Lanius lahtora*, differing merely in being smaller, that it is unnecessary to describe them separately. Some eggs of this species, taken by Colonel R. G. Wardlaw-Ramsay in Afghanistan, differ, however, in being cream-coloured, beautifully speckled with bright chestnut and underlying lavender in about equal proportions. The markings are very dense on the larger half of the egg and comparatively scanty on the smaller. Specimens measure from .85 to 1.05 in length, and from .65 to .77 in breadth.

Cephalophoneus bentet (Horsf.).

(Plate XIII. fig. 3.)

Lanius bentet, *Gadow, Cat. Birds B. M.* viii. p. 266 (1883); *Nehrk. Kat. Eiersamml.* p. 72 (1899).

Cephalophoneus bentet, *Sharpe, Hand-l.* iv. p. 287 (1903).

The eggs of the Bentet Shrike in the Collection are very similar to some of those of *C. erythronotus*. In shape they vary from a broad to a rather long oval. The ground-colour is creamy white, with fine dots and spots of brown and underlying blotches of pale lavender-grey scattered over the whole shell. They measure from .8 to .93 in length by .65 in breadth.

Cephalophoneus nigriceps (Frankl.).

Lanius nigriceps, *Gadow, Cat. Birds B. M.* viii. p. 268 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 463 (1889); *Oates, ed. Hume, Nests & Eggs Ind. Birds*, i. p. 315 (1889).

Cephalophoneus nigriceps, *Sharpe, Hand-l.* iv. p. 287 (1903).

The eggs of the Black-headed Shrike resemble those of *Lanius*

lahtora and *C. erythronotus* and are intermediate to them in size. They measure from .82 to 1 in length, and from .68 to .79 in breadth.

The series contains three clutches of eggs of the same abnormal coloration found among eggs of *C. erythronotus*, as already noticed.

Nehr. Kat., Eiersamml. p. 72 (1899).

Cephalophoneus nasutus, *Sharpe, Hand-l.* iv. p. 287 (1903).

Three eggs of the Philippine Black-headed Shrike are of a wide blunt oval shape, with little or no gloss. The ground-colour is greenish-white or creamy-white, spotted and blotched, especially round the larger end, with rusty brown and pale lavender underlying markings. They measure .85 to .9 in length, and .6 to .7 in breadth.

Genus OTOMELA, Bonap.

***Otomela phœnicuroides* (*Severtz.*).**

(Plate XIII. fig. 4.)

Lanius phœnicuroides, *Gadow, Cat. Birds B. M.* viii. p. 278 (1883);
Oates, Fauna Brit. Ind., Birds, i. p. 408 (1889); *Nehr. Kat.*
Eiersamml. p. 73 (1899).

Otomela phœnicuroides, *Sharpe, Hand-l.* iv. p. 288 (1903).

Eggs of the Rufous Shrike display considerable variety both in size and markings. Four of those in the Museum Collection are of a blunt broad oval form with a certain amount of gloss, but the fifth, from the Altai Mountains, is of a narrower oval shape. The ground-colour varies from greenish-white in the last named to pinky or creamy-white in the former, in which the reddish-brown and lavender spots and blotches are mostly grouped round the larger end. In the Altai specimen the markings are distributed all over

the shell. The measurements vary from .79 to .85 in length, and from .6 to .66 in breadth.

1. Altai Mountains (*Nehrkorn Coll.*). Crowley Bequest.
2. Kuldja, Turkestan. Crowley Bequest.
2. Kuldja, 7th June. Crowley Bequest.

Otomela cristata (Linn.).

Lanius cristatus, *Gadow, Cat. Birds B. M.* viii. p. 271 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 468 (1889); *Nehrk. Kat. Eiersamml.* p. 72 (1899).

Otomela phoenicura, *Tacz. Faune Orn. Sibér. Orient.* p. 493 (1891).

Otomela cristata, *Sharpe, Hand-l.* iv. p. 288 (1903).

Of the five eggs of the Brown Shrike in the Collection, four have the ground-colour greenish white, while the fifth from Dauria is of the rufous-buff type. The yellowish-brown or rufous markings and the underlying lavender blotches are much the same as in the allied forms. The measurements vary from .85 to .92 in length, and from .62 to .68 in breadth.

1. Darasun, Dauria, June (*Dybowski: Tristram Coll.*). Crowley Bequest.
2. Amur-land. Crowley Bequest.

Otomela isabellina (Hempr. & Ehr.).

Lanius arenarius, *Jerd. Birds Ind.* i. p. 407 (1862).

Lanius isabellinus, *Dresser, Birds Eur.* iii. p. 413 (1878); *Gadow, Cat. Birds B. M.* viii. p. 277 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 467 (1889); *Nehrk. Kat. Eiersamml.* p. 72 (1899).

Otomela isabellina, *Sharpe, Hand-l.* iv. p. 288 (1903).

Four eggs of the Isabelline or Pale-brown Shrike belong to the type with the ground-colour greenish white, and resemble those of *O. cristata* and other allied forms. Measurements vary from .84 to .86 in length, by .65 in breadth.

2. Altai Mountains. Crowley Bequest.
2. Altai Mountains. Crowley Bequest.

Otomela superciliosa (Lath.).

Lanius superciliosus, *Gadow, Cat. Birds B. M.* viii. p. 273 (1883); *Joy, Proc. U.S. Nat. Mus.* vi. p. 292 (1883); *Seebohm, Birds Japan. Emp.* p. 104 (1890); *Nehrk. Kat. Eiersamml.* p. 72 (1899).

Otomela superciliosa, *Sharpe, Hand-l.* iv. p. 288 (1903).

The eggs of the Japanese Red-tailed Shrike are of a regular oval shape and devoid of gloss. They are of a rich creamy-buff colour, spotted and blotched with pale chestnut-brown and lavender. As is the case with the eggs of the Shrikes in general, the markings are chiefly confined to the larger half of the egg and form a zone round the broad end. Nine examples measure from .82 to .96 in length, and from .67 to .7 in breadth.

* This egg, there can be little doubt, forms part of the same clutch as the two preceding ones.

Genus **RHODOPHONEUS**, *Heugl.***Rhodophoneus cruentus** (*Hempr. & Ehr.*).

(Plate XII. fig. 15.)

Laniarius cruentatus, *Blyth, Rep. Coll. Somali Co.* 6; *Sclater, Ibis*, 1860, p. 247.**Laniarius cruentus**, *Blanf. Geol. & Zool. Abyss.* p. 342; *Gadow, Cat. Birds B. M.* viii. p. 152 (1883).**Rhodophoneus cruentus**, *Antinori & Salvad. Viagg. Bogos*, p. 85; *Sharpe, Hand-l.* iv. p. 293 (1903).

Two eggs of the Crimson-breasted Bush-Shrike are of a long, pointed oval form and slightly glossed. The ground-colour is of a deep greenish blue, sparsely spotted and blotched with rufous-brown and lavender, the markings being larger and more numerous towards the larger end. The eggs measure respectively 1.05 by .71 and 1.06 by .75.

1. Ogayeh Wells, W. Kordofan.

Major H. W. Dunn [P.].

Genus **LANIARIUS**, *Vieill.***Laniarius rufiventris**, *Swains.*

(Plate XIII. fig. 6.)

Laniarius ferrugineus, *Sharpe, ed. Layard's Birds S. Africa*, p. 393 (1875-84).**Dryoscopus rufiventris**, *Gadow, Cat. Birds B. M.* viii. p. 134 (1883).**Dryoscopus ferrugineus**, *Stark & Sclater, Fauna S. Africa, Birds*, ii. p. 27 (1901).**Laniarius rufiventris**, *Sharpe, Hand-l.* iv. p. 293 (1903).

The eggs of the Greater Puff-backed Bush-Shrike are of a regular oval shape and moderately glossy. They are of a pale blue colour, speckled with reddish brown and lavender. The markings at the broad end are more or less confluent and form a cap. Two examples measure respectively : .97 by .72; 1.1 by .77.

2. South Africa.

Crowley Bequest.

Laniarius atrococcineus (*Burch.*).

(Plate XIII. fig. 16.)

Laniarius atrococcineus, *Anderss. Birds Damara-land*, p. 144 (1872); *Sharpe, ed. Layard's Birds S. Africa*, p. 389 (1875-84); *Gadow, Cat. Birds B. M.* viii. p. 152 (1883); *Stark & Sclater, Fauna S. Africa, Birds*, ii. p. 31 (1901); *Sharpe, Hand-l.* iv. p. 295 (1903).

The eggs of the Black-and-Crimson Shrike, taken by Mr. Andersson, are of a regular oval shape and moderately glossy. They are cream-coloured, spotted and blotched with pale brown and lavender, the broad end being more densely covered than the other parts. They measure respectively : .94 by .7; .91 by .65.

2. Otjimbingue, Damara-land (C. J.

Crowley Bequest.

Andersson: Tristram Coll.).

Genus **POMATORHYNCHUS**, Boie.**Pomatorhynchus senegalus** (Linn.).

(Plate XIII. fig. 7.)

Telephonus erythropterus, Gurney & Ayres, *Ibis*, 1860, p. 211; 1865, p. 273; *Nehrke. Kat. Eiersamml.* p. 69 (1899).

Laniarius senegalus, Sharpe, ed. *Layard's Birds S. Africa*, p. 394 (1875-84).

Telephonus senegalus, Gadow, *Cat. Birds B. M.* viii. p. 124 (1883).

Telephonus senegalus, Stark & Selater, *Fauna S. Africa, Birds*, ii. p. 19 (1901).

Pomatorhynchus senegalus, Sharpe, *Hand-l.* iv. p. 299 (1903).

The eggs of the Black-headed Bush-Shrike are of a regular oval shape, moderately glossy, and of a pinkish-white colour, marked with specks, blotches, streaks, and angular lines of reddish grey, brownish grey, and lavender. They measure from .93 to .99 in length, and from .67 to .71 in breadth.

2. Natal

T. Ayres, Esq. [C.].

4. S. Africa.

Genus **FALCUNCULUS**, *Vieill.***Falcunculus leucogaster**, *Gould.*

(Plate XIII. fig. 12.)

- Falcunculus leucogaster*, *Gould, Handb. Birds Austr.* i. p. 229 (1865);
Gadow, Cat. Birds B. M. viii. p. 174 (1883); *North, Nests & Eggs Austr. Birds*, p. 69 (1889); *Campbell, Nests & Eggs Austr. Birds*, i. p. 309 (1901); *Sharpe, Hand-l.* iv. p. 302 (1903).

An egg of the White-bellied Shrike-Tit in the Collection is of a somewhat narrow oval form and almost devoid of gloss. It is white, speckled, more densely at the broad end than elsewhere, with umber-brown and lavender. It measures .88 by .62.

1. West Australia, 7th Oct. (*Gilbert*). Gould Coll.

Genus **OREOICA**, *Gould.***Oreoica cristata** (*Lewin*).

(Plate XIII. fig. 11.)

- Oreoica gutturalis*, *Thien. Fortpflanz. ges. Vög.* tab. xxx. fig. 17 (1845-54).
Oreoica cristata, *Gould, Handb. Birds Austr.* i. p. 231 (1865); *Gadow, Cat. Birds B. M.* viii. p. 174 (1883); *North, Nests & Eggs Austr. Birds*, p. 70, pl. viii. fig. 6 (1889); *Nehrck. Kat. Eiersamml.* p. 70 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 310, pl. 12 (1901); *Sharpe, Hand-l.* iv. p. 303 (1903).

* *Baedeker (tom. cit. tab. 52. fig. 8)* figures the egg of this species a second time, under the name of *T. erythropterus*. *Bree*, on the other hand, figures the egg of *P. senegalus* as that of the present species (*Birds Eur.* 2nd ed. ii. p. 25, pl.).

The eggs of the Australian Bell-bird are of an ordinary oval shape and but slightly glossy. The majority are bluish white, spotted with black and, in a minor degree, with slaty grey. Others are pale blue, marked, chiefly at the broad end, with spots, scrawls, and thick lines of black and lavender-grey. Examples measure from 1.09 to 1.15 in length, and from .78 to .85 in breadth.

Genus **PACHYCEPHALA**, *Vig. & Horsf.*

***Pachycephala torquata*, Layard.**

Pachycephala torquata, *Layard, Ibis*, 1876, p. 146; *Gadow, Cat. Birds B. M.* viii. p. 201 (1883); *Sharpe, Hand-l.* iv. p. 303 (1903).

An egg, which Layard did not authenticate satisfactorily, but which he was of opinion might be referable to the Taviuni Thick-head, is of a narrow, pointed oval shape, extremely glossy and of a rufous-chocolate colour, with a broad band of very dark brown, almost black, round the larger end. It measures 1.14 by .76. This egg is quite unlike those of the other *Pachycephaline* birds in the Collection, and must be considered very doubtful.

***Pachycephala gutturalis* (Lath.).**

Pachycephala pectoralis, *Thien. Fortpflanz. ges. Vög.* tab. xxix. fig. 16, *a, b* (1845-54).

Pachycephala gutturalis, *Gould, Handb. Birds Austr.* i. p. 207 (1865); *Gadow, Cat. Birds B. M.* viii. p. 192 (1883); *North, Nests & Eggs Austr. Birds*, p. 64, pl. xii. fig. 9 (1889); *Nehrke, Kat. Eiersamml.* p. 71 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 319, pl. 12 (1901); *Sharpe, Hand-l.* iv. p. 306 (1903).

The eggs of the White-throated Thickhead are of an ordinary oval shape, occasionally pointed, and exhibiting a considerable amount of gloss. They vary from cream-colour to pale brownish buff, and are spotted and blotched with umber-brown and purplish-grey. The markings are generally dense and confluent at the broad end of the egg, where they form an irregular zone, but are sparse elsewhere. Specimens measure from .87 to 1.01 in length, and from .65 to .7 in breadth.

***Pachycephala chlorura*, *Gray*.**

(Plate XIII. fig. 15.)

Pachycephala chlorura, *Layard, Ibis*, 1878, p. 272; *Gadow, Cat. Birds B. M.* viii. p. 194 (1883); *Sharpe, Hand-l.* iv. p. 306 (1903).

The eggs of the New Hebrides Thickhead in the Collection are

of a broad oval shape and very glossy. They are pale salmon-pink, spotted and blotched with rich purplish red and dark lavender-grey, chiefly in the form of an irregular zone round the broad end of the egg. Two examples measure respectively: $\cdot 96$ by $\cdot 72$; $\cdot 1$ by $\cdot 77$.

2. Aneiteum, New Hebrides Voy. H.M.S. 'Herald.'
(*J. Macgillivray*).

***Pachycephala obscurior*, Hartert.**

(Plate XIII. fig. 17.)

Pachycephala obscurior, Hartert, *Nov. Zool.* iii. p. 15 (1896); Sharpe, *Hand-l.* iv. p. 307 (1903).

Two eggs of the Dusky Thickhead taken by Mr. Weiske are of a broad oval shape, slightly glossy, and white, marked, chiefly in the form of a zone round the broad end, with black spots and small irregularly-shaped blotches, with which are intermingled a few spots of dark grey. They measure respectively: $1\cdot 1$ by $\cdot 81$; $1\cdot 06$ by $\cdot 81$.

2. S.E. New Guinea. Mr. E. Weiske [C.].

***Pachycephala xanthetræa* (Forst.).**

(Plate XIII. fig. 19.)

Pachycephala xanthetræa, E. L. & E. L. C. Layard, *Ibis*, 1882, p. 516; Sharpe, *Hand-l.* iv. p. 308 (1903).

Pachycephala xantherythræa, Gadow, *Cat. Birds B. M.* viii. p. 207 (1888).

Layard procured an egg in New Caledonia which is undoubtedly referable to a species of *Pachycephala*, either *P. morariensis* or *P. xanthetræa*. From its small size it appears to be referable to the latter species, the Blue-backed Thickhead. It is smaller than, but quite similar in colour to, the eggs of *P. gutturalis*, and measures $\cdot 82$ by $\cdot 61$.

1. New Caledonia (E. L. Layard: Crowley Bequest.
Tristram Coll.).

***Pachycephala rufiventris* (Lath.).**

Pachycephala rufiventris, Gould, *Handb. Birds Austr.* i. p. 212 (1865); Gadow, *Cat. Birds B. M.* viii. p. 208 (1888); North, *Nests & Eggs Austr. Birds*, p. 67, pl. xii. fig. 11 (1889); Nehrk. *Kat. Eiersamml.* p. 71 (1899); Campbell, *Nests & Eggs Austr. Birds*, i. p. 324 (1901); Sharpe, *Hand-l.* iv. p. 308 (1903).

The eggs of the Rufous-breasted Thickhead are of an ordinary oval shape, occasionally much pointed at the smaller end, and moderately glossy. They are of an olive-buff colour, spotted and blotched, chiefly in a zone round the broad end, with darker olive or olive-brown and pale lavender-grey. They measure from $\cdot 85$ to $\cdot 9$ in length, and from $\cdot 6$ to $\cdot 68$ in breadth.

***Pachycephala olivacea*, Vig. & Horsf.**

Pachycephala olivacea, Gould, *Handb. Birds Austr.* i. p. 218 (1865); *Gadow, Cat. Birds B. M.* viii. p. 212 (1883); *North, Nests & Eggs Austr. Birds*, p. 68, pl. viii. fig. 11 (1889); *Nehrke, Kat. Eiersamml.* p. 71 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 326, pl. 12 (1901); *Sharpe, Hand-l.* iv. p. 309 (1903).

Three eggs of the Olivaceous Thickhead in the Collection are of an oval shape, inclining to the biconical, the broader end being somewhat sharply pointed. They are slightly glossy and cream-coloured, sparingly spotted and blotched with dark reddish brown or umber-brown and lavender. The markings are disposed chiefly on the broad half. They measure 1.1 by .79; 1.13 by .77; 1.18 by .78 respectively.

***Pachycephala xanthoprocta*, Gould.**

(Plate XIII. fig. 13.)

Pachycephala xanthoprocta, *Gadow, Cat. Birds B. M.* viii. p. 211 (1893); *North, Nests & Eggs Austr. Birds*, p. 409 (1889); *Nehrke, Kat. Eiersamml.* p. 71 (1899); *Sharpe, Hand-l.* iv. p. 309 (1903).

The eggs of the Norfolk Island Thickhead in the Collection are of a rather broad oval form and slightly glossy. They are of a pale creamy-buff colour, thickly mottled and spotted over the broader half with umber-brown and lavender-grey. The smaller half of the egg is comparatively free of markings. Two examples measure respectively: 1 by .7; .95 by .7.

- | | |
|--------------------|-------------|

Genus **HYLOTERPE**, *Cab.***Hyloterpe philippinensis**, *Walden.*

(Plate XIII. fig. 18.)

Pachycephala philippinensis, *Gadow, Cat. Birds B. M.* viii. p. 221 (1883).*Hyloterpe philippinensis*, *Grant & Whitehead, Ibis*, 1898, p. 241, pl. v. fig. 1; *Sharpe, Hand-l.* iv. p. 313 (1903).

The egg of the Yellow-bellied Thickhead in the Collection is of an oval shape and rather glossy. It is of a pale creamy-buff colour, becoming darker on the broad end of the egg, round which there is a wide but very irregular zone, composed of dull chestnut and dark bluish-grey spots. The remainder of the egg is unmarked. This example measures $\cdot 9$ by $\cdot 68$.

1. Samar, Philippine Islands, June. J. Whitehead, Esq. [C.].

Genus **PACHYCEPHALOPSIS**, *Salvad.***Pachycephalopsis poliosoma**, *Sharpe.*

(Plate XIII. fig. 20.)

Pachycephalopsis poliosoma, *Gould, Birds New Guinea*, iii. pl. 26; *Sharpe, Hand-l.* iv. p. 314 (1903).*Pachycephala poliosoma*, *Gadow, Cat. Birds B. M.* viii. p. 226 (1883).

The egg of the New Guinea Grey Thickhead in the Collection is of a regular oval shape and quite devoid of gloss. It is of a creamy-buff colour, rather thickly spotted and mottled all over with pale olive-brown and lavender; and whereas the markings of the former colour are pretty equally distributed over the entire shell, those of the latter are more prominent at the broad end, where they become confluent and form large patches. The egg measures $1\cdot 08$ by $\cdot 76$.

1. S.E. New Guinea. Mr. E. Weiske [C.].

Genus **EOPSALTRIA**, *Swains.***Eopsaltria australis** (*White*).

Eopsaltria australis, *Gould, Handb. Birds Austr.* i. p. 293 (1865); *Ramsay, Trans. Phil. Soc. N.S.W.* 1865, p. 326, pl. i. figs. 7 & 8; *Gadow, Cat. Birds B. M.* viii. p. 176 (1883); *North, Nests & Eggs Austr. Birds*, p. 108 (1889); *Nehrke, Kat. Eiersamml.* p. 70 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 311, pl. 12 (1901); *Sharpe, Hand-l.* iv. p. 315 (1903).

The eggs of the Yellow-breasted Shrike-Robin are generally of a broad oval form, inclining to the elliptical or spheroidal, and they are moderately glossy. They are greenish blue of various shades, rather densely speckled and mottled with chestnut-brown and underlying lavender-grey. The markings are frequently confluent and indistinct, but on some specimens they are well defined. In

most cases they are very dense at the broad end, where they form a wide belt or, less frequently, a cap. Specimens measure from .77 to .9 in length, and from .6 to .65 in breadth.

Eopsaltria georgiana (Q. & G.).

Pachycephala griseogularis, *Thien. Fortpflanz. ges. Vög.* tab. xxix. fig. 15 (1845-54).

Eopsaltria griseogularis, *Gould, Handb. Birds Austr.* i. p. 294 (1865).

Eopsaltria georgiana, *Gadow, Cat. Birds B. M.* viii. p. 178 (1883); *Campbell, Nests & Eggs Austr. Birds*, i. p. 315 (1901); *Sharpe, Hand-l.* iv. p. 315 (1903).

The eggs of the Grey-breasted Shrike-Robin in the Collection are of a broad oval form and glossy. They are of an ochraceous-buff colour. One specimen exhibits a broad zone of slightly darker tint than the ground-colour; the other is mottled with chestnut-brown, chiefly in a wide confluent zone round the broad end. They measure respectively: .84 by .62; .8 by .61.

Pæcile palustris (Linn.).

Parus palustris, *Thien. Fortpflanz. ges. Vög.* p. 150, tab. xviii. fig. 7, *a, b* (1845-54); *Dresser, Birds Eur.* iii. p. 99, part. (1871); *Gadow, Cat. Birds B. M.* viii. p. 49, part. (1883).

Poecila palustris, *Baedeker, Eier Eur. Vög.* tab. 43. fig. 13 (1855-63).

Pæcile palustris, *Sharpe, Hand-l.* iv. p. 317 (1903).

The eggs of the Marsh-Titmouse and those of its allies, *P. dresseri* and *P. borealis*, cannot be separated from each other by any character. They are of a rather pointed oval form, and while some have a slight gloss others are devoid of gloss. They are white, speckled and spotted with two shades of chestnut. The markings are everywhere sparse, except at the broad end, where they are, in many specimens, dense, and form either an irregular zone or an ill-defined cap. Many examples, however, are evenly marked all over with very small specks. They measure from .59 to .66 in length, and from .45 to .52 in breadth.

Pœcile cincta, *Sharpe, Hand-l.* iv. p. 320 (1903).

The eggs of the Lapp Titmouse are of an excessively broad oval form, some specimens approaching the spheroidal. They are white, devoid of gloss, and sparingly speckled and spotted with pale chestnut. In most examples the markings are very evenly distributed over the shell; in a few they are somewhat more dense at the larger end, but seldom conspicuously so. In the eggs of this species the spots are remarkably well-defined and distinct, and rarely coalesce. Examples measure from .62 to .75 in length, and from .5 to .54 in breadth.

Pœcile atricapilla, *Sharpe, Hand-l.* iv. p. 321 (1903).

The eggs of the American Black-capped Titmouse are broad ovals and without gloss. They are white or pinkish white, speckled and blotched with chestnut. Some specimens are merely speckled all over; others have blotches of small size combined with specks and spots, especially at the larger end, where an indistinct cap is often formed. They measure from .55 to .6 in length, and from .45 to .5 in breadth.

The eggs of the Crested Titmouse are of a broad pointed oval shape, and in some cases slightly glossy. They are white, usually marked in a bold manner with rich chestnut. In the majority of specimens the markings are chiefly on the larger end of the egg, where they coalesce and form a well-defined cap or broad zone. In others the markings are small and distinct, and although more dense at the broad end than elsewhere, they do not form a noticeable cap. Many of the more richly-marked examples are blotched with pale purplish red, underlying the chestnut. They measure from .6 to .7 in length, and from .46 to .57 in breadth.

Lophophanes inornatus (Gambel).

- Lophophanes inornatus*, *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 91 (1874); *Coues, Birds Colorado Vall.* p. 114 (1878); *Sharpe, Hand-l.* iv. p. 324 (1903).
Parus inornatus, *Gadow, Cat. Birds B. M.* viii. p. 32 (1883); *Nehrk. Kat. Eiersamml.* p. 66 (1899).

The eggs of the American Plain Titmouse are of a pointed oval form and slightly glossy. They are white, marked with delicate specks of pale chestnut, which are confined almost entirely to the larger end, where, in three examples, they form a narrow but distinct zone, and in a fourth a small cap. They measure respectively: .69 by .5; .68 by .5; .75 by .54; .64 by .5.

4. Oakland, California, 3rd April Salvin-Godman Coll.
 (W. E. Bryant: *Henshaw Coll.*).

Genus PERIPARUS, Selys-Longch.***Periparus ater* (Linn.).**

- Parus ater*, *Thien. Fortpflanz. ges. Vög.* p. 149, tab. xviii. fig. 6, *a, b* (1845-54); *Baedeker, Eier Eur. Vög.* tab. 43. fig. 10 (1855-63); *Dresser, Birds Eur.* iii. p. 87 (1872); *Gadow, Cat. Birds B. M.* viii. p. 40 (1883).
Periparus ater, *Sharpe, Hand-l.* iv. p. 325 (1903).

The eggs of the European Coal Titmouse are of a rather broad, pointed oval form and without gloss. They are white, somewhat thickly speckled and spotted with two shades of pale chestnut, especially at the broad end, where the markings often form an imperfect cap. The spots on the egg of this Titmouse are usually firm and distinct, but in a clutch taken in Pomerania they are cloudy and blotchy, as if sunk into the shell. Examples measure from .56 to .65 in length, and from .45 to .5 in breadth.

***Periparus britannicus* (Sharpe & Dresser).**

- Parus ater*, *apud Hewitson, Eggs of Brit. Birds*, i. p. 156, pl. xxxix. fig. iv (1856).
Parus britannicus, *Dresser, Birds Eur.* iii. p. 93 (1872); *Gadow, Cat. Birds B. M.* viii. p. 41 (1883); *Seebohm, Brit. Birds*, i. p. 472, pl. 9 (1883); *id. Eggs of Brit. Birds*, p. 211, pl. 53. fig. 16 (1896).
Periparus britannicus, *Sharpe, Hand-l.* iv. p. 325 (1903).

The eggs of the British Coal Titmouse are very similar to those of *P. ater*, and cannot be separated from them, but owing to the larger series of the eggs of the British bird they appear more varied than those of the other. A few examples are cream-coloured, quite

spotless; others are minutely speckled all over; and others again are handsomely blotched, as well as spotted, at the larger end. They measure from .58 to .7 in length, and from .42 to .5 in breadth.

Periparus melanolophus, *Sharpe, Hand-l.* iv. p. 326 (1903).

The eggs of the Crested Black Titmouse are of a regular oval form and very slightly glossy. They are white, speckled and blotched with dull chestnut-brown and underlying pale lavender. The markings are dense at the larger end, and form an imperfect cap at that part. Examples differ much in size, the smallest measuring .58 by .43, and the largest .7 by .52.

Parus major, *Linn.*

Parus major, *Thien. Fortpflanz. ges. Vög.* p. 146, tab. xxviii. fig. 2, *a, b* (1845-54); *Baedeker, Eier Eur. Vög.* tab. 43. fig. 9 (1855-63); *Hewitson, Eggs of Brit. Birds*, i. p. 149, pl. xxxix. fig. i (1856); *Dresser, Birds Eur.* iii. p. 79 (1871); *Saunders, Ibis*, 1871, p. 28; *Seebohm, Brit. Birds*, i. p. 463, pl. 9 (1883); *Gadow, Cat. Birds B. M.* viii. p. 19 (1883); *Seebohm, Eggs of Brit. Birds*, p. 210, pl. 53. fig. 13 (1896); *Sharpe, Hand-l.* iv. p. 328 (1903)..

The eggs of the Great Titmouse are of a broad oval shape and possess a slight amount of gloss. They are white, marked with specks, spots, and small blotches of two shades of chestnut. In many specimens the markings are evenly distributed over the shell; in others they are more dense at the large end, where they are often confluent and form a rough zone or cap. A few examples are so feebly marked that they appear, at first sight, to be plain white. They measure from .65 to .8 in length, and from .5 to .55 in breadth.

Parus cinereus, *Vicill.*

- Parus atriceps*, *Legge*, *Birds Ceylon*, p. 557 (1879); *Oates*, *Fauna Brit. Ind., Birds*, i. p. 46 (1889); *Oates ed. Hume*, *Nests & Eggs Ind. Birds*, i. p. 31 (1889); *Betham*, *Journ. Bomb. Nat. Hist. Soc.* xii. p. 779 (1899).
- Parus cinereus*, *Gadow*, *Cat. Birds B. M.* viii. p. 16 (1883); *Dresser*, *Birds Eur.* ix. (*Suppl.*) p. 115 (1895); *Sharpe*, *Hand-l.* iv. p. 329 (1903).

The eggs of the Indian Grey Titmouse are mostly of a regular oval form. Some have a slight gloss; the majority are entirely without gloss. They are white, rather boldly spotted and blotched with chestnut. The markings are far more dense and frequent at the larger end than elsewhere, and form at that part an ill-defined cap or zone of confluent blotches. The eggs vary much in size, the smallest example in the Collection measuring .6 by .48, and the largest .78 by .57.

Genus **CYANISTES**, *Kaup.***Cyanistes cæruleus** (*Linn.*).

Parus cæruleus, *Thien. Fortpflanz. ges. Vög.* p. 147, tab. xviii. fig. 3, *a, b, c* (1845-54); *Hewitson, Eggs of Brit. Birds*, i. p. 151, pl. xxxix. fig. ii (1856); *Dresser, Birds Eur.* iii. p. 131 (1871); *Gadow, Cat. Birds B. M.* viii. p. 12 (1883); *Seebohm, Brit. Birds*, i. p. 468, pl. 9 (1883); *id. Eggs of Brit. Birds*, p. 210, pl. 53. figs. 14, 15 (1896).

Cyanistes cæruleus, *Baedeker, Eier Eur. Vög.* tab. 43. fig. 11 (1855-63); *Sharpe, Hand-l.* iv. p. 333 (1903).

The eggs of the Blue Titmouse are of a broad pointed oval shape and have little or no gloss. They are white, marked with light chestnut-brown. In many specimens the markings consist entirely of small specks and spots; in others of specks, spots, and small blotches. They are almost invariably more thickly disposed at the broad end than elsewhere, and form an indistinct cap or zone. They measure from $\cdot 55$ to $\cdot 7$ in length, and from $\cdot 41$ to $\cdot 5$ in breadth.

Genus ÆGITHALISCUS, Cab.**Ægithaliscus erythrocephalus (Vig.).**

(Plate XIV. fig. 11.)

Acredula erythrocephala, *Gadow, Cat. Birds B. M.* viii. p. 56 (1883); *Nehr. Kat. Eiersamml.* p. 67 (1899).

Ægithaliscus erythrocephalus, *Oates, Fauna Brit. Ind., Birds*, i. p. 50 (1889); *Oates ed. Hume, Nests & Eggs Ind. Birds*, i. p. 36 (1889); *Sharpe, Hand-l.* iv. p. 335 (1903).

The eggs of the Red-headed Titmouse are of a blunt oval form and with scarcely any gloss. The ground is pinkish or creamy white, and the markings are almost entirely confined to a conspicuous and well-defined zone round the larger end of the egg. This zone is composed of a multitude of minute purplish-red specks which are confluent in the majority of specimens. A few minute specks of the same colour are scattered over the remainder of the shell. The eggs measure from .53 to .6 in length, and from .43 to .46 in breadth.

Genus PSALTRIPARUS, Bonap.***Psaltriparus minimus* (Townsend).**

Psaltriparus minimus, var. *minimus*, *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 109 (1874); *Sharpe, Hand-l.* iv. p. 336 (1903).

Acredula minima, *Gadow, Cat. Birds B. M.* viii. p. 56 (1883); *Nehr. Kat. Eiersamml.* p. 67 (1899).

The egg of the Bush-Titmouse in the Collection is of a regular oval shape, glossless and plain white. It measures .56 by .42.

1. North America (*Smiths. Inst.*).

Salvin-Godman Coll.

Genus **ÆGITHALUS**, *Herm.***Ægithalus caudatus** (*Linn.*).

Parus caudatus, *Thien. Fortpflanz. ges. Vög.* p. 153, tab. xviii. fig. 11, a-d (1845-54).

Mecistura caudata, *Baedecker, Eier Eur. Vög.* tab. 43. fig. 19 (1855-63).

Acredula caudata, *Dresser, Birds Eur.* iii. p. 67 (1872); *Gadow, Cat. Birds B. M.* viii. p. 59 (1883).

Ægithalus caudatus, *Sharpe, Hand-l.* iv. p. 337 (1903).

The eggs of the Long-tailed Titmouse are of a pointed oval form and have a small amount of gloss. They are of two types of coloration, both apparently equally common. In the first type the egg is plain white; in the second it is white or pinkish white, speckled and freckled with two shades of pale chestnut or rufous and some faint lavender. The markings are usually denser at the broad end than elsewhere, and sometimes form an indistinct zone or cap at that part. Specimens measure from .51 to .57 in length, and from .39 to .43 in breadth.

Ægithalus roseus (*Blyth*).

Parus caudatus, *apud Hewitson, Eggs of Brit. Birds*, i. p. 158, pl. xl. fig. ii (1856).

Acredula rosea, *Dresser, Birds Eur.* iii. p. 62 (1873); *Gadow, Cat. Birds B. M.* viii. p. 61 (1883); *Seeböhm, Brit. Birds*, i. p. 486, pl. 9 (1883); *id. Eggs of Brit. Birds*, p. 214, pl. 53. fig. 19 (1896).

Ægithalus roseus, *Sharpe, Hand-l.* iv. p. 337 (1903).

The eggs of the British Long-tailed Titmouse are very numerous represented in the Collection. They vary in shape from a long pointed, to a short broad, oval form, and, as a rule, they possess a small amount of gloss. Like the eggs of *Æ. caudatus* they are of two types of coloration: plain white, and white speckled with rufous and pale purple. The two types, judging from the series in the Collection, are of about equal occurrence. The markings on some examples are very faint and indistinct, but they impart a rosy tinge to the shell. Specimens measure from .52 to .62 in length, and from .4 to .48 in breadth.

Remiza pendulina, *Sharpe, Hand-l.* iv. p. 339 (1903).

The eggs of the Penduline Titmouse are of an elongated oval form, without gloss and plain white. Three examples measure respectively: .64 by .41; .63 by .44; .6 by .44.

1. South France (*Dr. Compagnon*). Seebohm Coll.
2. Parnassus, Greece, 8th May (H. Seebohm). Seebohm Coll.

Genus **ANTHOSCOPUS**, *Boie*.

Anthoscopus minutus (*Lath.*).

Anthoscopus capensis, *Sharpe*, ed. *Layard's Birds S. Africa*, p. 327 (1875-84).
Ægithalus capensis, *Gadow*, *Cat. Birds B. M.* viii. p. 70 (1883);
Nehrk. Kat. Eiersamml. p. 67 (1899).
Anthoscopus minutus, *Sharpe*, *Hand-l.* iv. p. 340 (1903).

The eggs of the Cape Penduline Titmouse are of a very narrow and elongated oval form, devoid of gloss and plain white. Three examples measure respectively: .56 by .38; .52 by .36; .58 by .38.

3. South Africa. E. L. Layard, Esq. [P.].

Genus **AURIPARUS**, *Baird*.

Auriparus flaviceps (*Sundev.*).

(Plate XIV. fig. 8.)

Auriparus flaviceps, *Baird*, *Brewer & Ridgw. N. Amer. Birds*, i. p. 112 (1874); *Coues*, *Birds Colorado Vall.* p. 129 (1878); *Salv. & Godm. Biol. Centr.-Amer., Aves*, i. p. 59 (1880); *Sharpe*, *Hand-l.* iv. p. 341 (1903).
Ægithalus flaviceps, *Gadow*, *Cat. Birds B. M.* viii. p. 72 (1883);
Nehrk. Kat. Eiersamml. p. 67 (1899).

The eggs of the Verdin or Yellow-headed Bush-Titmouse are of a broad oval form and without gloss. They are pale blue, speckled with rufous brown. The markings are sometimes very dense at the larger end, where they become confluent and form a well-defined cap. In one example, however, the specks are very evenly distributed over the entire shell, and in another they are very sparse over the smaller half. Two examples measure respectively: .6 by .46; .58 by .44.

Genus **APHELOCEPHALA**, *Oberh.***Aphelocephala leucopsis** (*Gould*).

Xerophila leucopsis, *Gould, Handb. Birds Austr.* i. p. 382 (1865); *Ramsay, P. L. S. N.S.W.* vii. p. 407, pl. 3. fig. 7 (1882); *Gadow, Cat. Birds B. M.* viii. p. 73 (1883); *North, Nests & Eggs Austr. Birds*, p. 150, pl. ix. fig. 14 (1889); *Nehrke, Kat. Eiersamml.* p. 68 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 287, pl. 11 (1901).

Aphelocephala leucopsis, *Sharpe, Hand-l.* iv. p. 342 (1903).

The eggs of the White-faced Titmouse are of a pointed, but broad, oval form, and have a fair amount of gloss. They are described by Ramsay as being "of a dull white thickly spotted and freckled all over with reddish-brown, dull chocolate-brown, or dark wood-brown; in some specimens the whole of the ground-colour is obscured by reddish-brown freckles, others have a zone of confluent spots of dark blackish-brown on the larger end and only a few dots or freckles on the remaining portion; average length .7 by .53 inch." Two examples in the Collection measure .79 by .58.

4. Australia.

Purchased.

Genus **SPHENOSTOMA**, *Gould*.**Sphenostoma cristatum**, *Gould*.

Sphenostoma cristatum, *Gould, Handb. Birds Austr.* i. p. 316 (1865); *Gadow, Cat. Birds B. M.* viii. p. 74 (1883); *North, Nests & Eggs Austr. Birds*, p. 71, pl. viii. fig. 5 (1889); *Nehrke, Kat. Eiersamml.* p. 68 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 269, pl. 11 (1901); *Sharpe, Hand-l.* iv. p. 342 (1903).

The eggs of the Crested Wedge-bill are of an ordinary oval form and possess a considerable amount of gloss. They are blue, sparingly speckled and spotted with black and neutral tint. The markings are small and distinctly defined, and more frequent at the larger end than elsewhere. They resemble very closely the eggs of the common Song-Thrush. Six examples measure from .92 to 1 in length, and from .67 to .75 in breadth.

Family REGULIDÆ.

Genus REGULUS, *Koch*.Regulus regulus (*Linn.*).

Regulus flavicapillus, *Thien. Fortpflanz. ges. Vög.* tab. xix. fig. 7, *a-c* (1845-54).

Regulus crocecephalus, *Baedeker, Eier Eur. Vög.* tab. 51. fig. 1 (1855-63).

Regulus auricapillus, *Hewitson, Eggs of Brit. Birds*, i. p. 146, pl. xxxviii. figs. i & ii (1856).

Regulus cristatus, *Dresser, Birds Eur.* ii. p. 453 (1874); *Seebohm, Brit. Birds*, i. p. 453, pl. 11 (1883); *Gadow, Cat. Birds B. M.* viii. p. 80 (1883); *Seebohm, Eggs of Brit. Birds*, p. 208, pl. 53. fig. 10 (1896).

Regulus regulus, *Sharpe, Hand-l.* iv. p. 343 (1903).

The eggs of the Goldcrest, or Golden-crested Wren, are of an ordinary oval shape and exhibit very little gloss. The majority of the eggs of this species are dull white, densely mottled, generally on the larger half, in the form of a broad zone or large cap, with pale brown and lavender intermingled. Some specimens, however, are almost plain white; others are of a pale cream-colour, very faintly mottled all over with the very palest brown, but less densely on the smaller half than on the larger. Specimens measure from $\cdot 52$ to $\cdot 6$ in length, and from $\cdot 4$ to $\cdot 44$ in breadth.

Regulus ignicapillus (Brehm).

- Regulus ignicapillus*, *Thien. Fortpflanz. ges. Vög.* tab. xix. fig. 6, *a, b* (1845-54); *Hewitson, Eggs of Brit. Birds*, i. p. 148, pl. xxxviii. fig. iii (1856); *Dresser, Birds Eur.* ii. p. 459 (1874); *Seebohm, Brit. Birds*, i. p. 458, pl. 11 (1883); *Gadow, Cat. Birds B. M.* viii. p. 83 (1883); *Seebohm, Eggs of Brit. Birds*, p. 209, pl. 53. fig. 11 (1896); *Sharpe, Hand-l.* iv. p. 344 (1903).
Regulus pyrocephalus, *Baedeker, Eier Eur. Vög.* tab. 51. fig. 2 (1855-63).

The eggs of the Fire-crested Wren are of quite the same character as those of *R. regulus*, but the ground-colour is tinged with pink, and the markings are of a pale lilac-red colour, mingled with lavender or pale brown. There is no appreciable difference in the size of the eggs of the two species.

***Regulus maderensis*, Vernon Harcourt.**

(Plate XIV. figs. 9 & 12.)

Regulus maderensis, *Dresser, Birds Eur.* ii. p. 465 (1874); *Gadow, Cat. Birds B. M.* viii. p. 84 (1883); *Koenig, J. f. O.* 1890, p. 278, taf. viii. fig. 8; *Sharpe, Hand-l.* iv. p. 344 (1903).

Four eggs of the Madeiran Golderest in the Collection differ from those of *R. regulus* and *R. ignicapillus* in being densely marked with specks, spots, and small blotches of lilac-red and lavender. The markings are most dense on the broad half of the egg. Four examples measure respectively: .55 by .43; .57 by .43; .55 by .42; .57 by .45.

4. Rabaçal, Madeira, June.

C. J. Cossart, Esq. [P.].

***Regulus calendula* (Linn.).**

Regulus calendula, *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 75 (1874); *Gadow, Cat. Birds B. M.* viii. p. 85 (1883); *Nehrk. Kat. Eiersamml.* p. 68 (1899); *Sharpe, Hand-l. B.* iv. p. 344 (1903).

The eggs of the Ruby-crowned Kinglet in the Collection appear to have become discoloured by damp, probably soon after they were taken from the nest, or they may have been addled. Herr Nehrkorn states that the eggs of this species resemble those of *R. ignicapillus*. Six examples measure on the average .55 by .45.

6. Nova Scotia, 9th June (*Field Coll.*). Crowley Bequest.

Family SITTIDÆ.

Genus *SITTA*, Linn.*Sitta cæsia*, Meyer & Wolf.

- Sitta europea*, Thien. *Fortpflanz. ges. Vög.* tab. xvii. fig. 16, *a, b* (1845-54); Hewitson, *Eggs of Brit. Birds*, i. p. 247, pl. lxii. fig. iv (1856).
Sitta cæsia, Baedeker, *Eier Eur. Vög.* tab. 43. fig. 6 (1855-63); Dresser, *Birds Eur.* iii. p. 175 (1873); Gadow, *Cat. Birds B. M.* viii. p. 347 (1883); Seebohm, *Brit. Birds*, i. p. 523, pl. 12 (1883); *id.* *Eggs of Brit. Birds*, p. 219, pl. 54. figs. 7 & 8 (1896); Sharpe, *Hand-l.* iv. p. 347 (1903).

The eggs of the Common Nuthatch are mostly of a narrow and pointed oval shape, and slightly glossy. They are white, marked with reddish brown and lilac or lavender. On many specimens the markings consist chiefly of small blotches, either evenly distributed over the entire shell, or forming a cap at the broader end. Some examples are evenly speckled all over, and others are unmarked, except at the broad end, where a small and well-defined cap of two or three shades of red mixed up together is formed. Examples measure from .68 to .83 in length, and from .5 to .6 in breadth.

Sitta neumayeri, Michah.

- Sitta syriaca*, Thien. *Fortpflanz. ges. Vög.* tab. xvii. fig. 15, *a, b* (1845-54); Baedeker, *Eier Eur. Vög.* tab. 43. fig. 8 (1855-63); Bree, *Birds Eur.* 2nd ed. iii. p. 52, pl. (1875); Danford, *Ibis*, 1878, p. 10.

Sitta neumayeri, *Sharpe & Dresser, Birds Eur.* iii. p. 183 (1872); *Gadow, Cat. Birds B. M.* viii. p. 345 (1883); *Sharpe, Hand-l.* iv. p. 347 (1903).

The eggs of the Western Rock-Nuthatch are of a pointed oval shape and very glossy. They are white, marked with pale reddish brown and lilac. At one end of the series will be found eggs which are marked with blotches and spots, chiefly on the broader half; and at the other end eggs which are marked with only a few specks, or are altogether plain and unmarked. In a few specimens, the blotches form an ill-defined cap at the broad end of the egg, but, as a rule, they are distinct and separate from each other. Examples measure from .73 to .92 in length, and from .55 to .65 in breadth.

Sitta whiteheadi, Sharpe.

(Plate XIV. fig. 15.)

Sitta whiteheadi, Sharpe, *P. Z. S.* 1884, p. 233; Whitehead, *Ibis*, 1885, p. 28, pl. ii.; Dresser, *Birds Eur.* ix. (Suppl.) p. 133 (1895); Sharpe, *Hand-l.* iv. p. 348 (1903).

The eggs of the Corsican Nuthatch are not distinguishable from those of *S. krueperi*. Seven examples measure from .66 to .7 in length, and from .49 to .52 in breadth.

Sitta leucopsis, Gould.

(Plate XIV. fig. 14.)

Sitta leucopsis, *Gadow, Cat. Birds B. M.* viii. p. 352 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 306 (1899); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 306 (1899); *Nehrke, Kat. Eiersamml.* p. 75 (1899); *Sharpe, Hand-l.* iv. p. 349 (1903).

The eggs of the White-cheeked Nuthatch do not appear to differ in any manner from those of *S. krueperi*. Three examples measure respectively: .66 by .55; .67 by .53; .7 by .53.

3. Sonamarg, Kashmir, 29th May Hume Coll.
(*C. R. Cock*).

Sitta pygmæa, Vig.

(Plate XIV. fig. 16.)

Sitta pygmæa, *Baird, Brewer & Ridgw. N. Amer. Birds*, i. p. 120 (1874); *Gadow, Cat. Birds B. M.* viii. p. 355 (1883); *Nehrke, Kat. Eiersamml.* p. 75 (1899); *Sharpe, Hand-l.* iv. p. 350 (1903).

The egg of the Pigmy Nuthatch in the Collection is of a regular oval shape and devoid of gloss. It is white, speckled very evenly all over the shell with pale reddish-brown and lilac, and resembles many of the eggs of *S. krueperi*. It measures .61 by .48.

1. British Columbia. J. K. Lord, Esq. [P.].

Genus *DENDROPHILA*, Swains.*Dendrophila frontalis*, Swains.

(Plate XIV. fig. 18.)

Dendrophila frontalis, *Legge, Birds Ceylon*, p. 560 (1879); *Sharpe, Hand-l.* iv. p. 351 (1903).
Sitta frontalis, *Gadow, Cat. Birds B. M.* viii. p. 358 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 307 (1899); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 196 (1889).

The eggs of the Velvet-fronted Blue Nuthatch are of a broad oval shape and devoid of all gloss. They are white, rather coarsely blotched, chiefly at the broad end, with reddish brown and lilac-red. Four examples measure respectively: .69 by .55; .66 by .51; .67 by .5; .67 by .5.

3. Sikhim Terai, 17th April. Hume Coll.
1. Kotagherry, Nilghiri Hills, S. India, Hume Coll.

Genus **NEOSITTA**, *Hellmayr*.**Neositta chrysoptera** (*Lath.*).

Sittella chrysoptera, *Gould, Handb. Birds Austr.* i. p. 609 (1865); *Gadow, Cat. Birds B. M.* viii. p. 360 (1883); *North, Nests & Eggs Austr. Birds*, p. 240 (1889); *Nehrk. Kat. Eiersamml.* p. 75 (1899); *Campbell, Nests & Eggs Austr. Birds*, i. p. 237, pl. 13 (1901).

Neositta chrysoptera, *Sharpe, Hand-l.* iv. p. 351 (1903).

The eggs of the Orange-winged Creeper are of an ordinary oval form and slightly glossy. They are bluish-white, profusely marked with spots and small blotches of dark slaty-brown and pale slaty-grey. Three examples measure respectively: .68 by .51; .65 by .51; .66 by .51.

3. New South Wales, Dec.
(*E. P. Ramsay*).

Gould Coll.

Neositta pileata (*Gould*).

(Plate XIV. fig. 17.)

Sittella pileata, *Gould, Handb. Birds Austr.* i. p. 612 (1865); *Gadow, Cat. Birds B. M.* viii. p. 362 (1883); *North, Proc. Linn. Soc. N.S.W.* 2nd ser. ii. p. 409 (1887); *id. Nests & Eggs Austr. Birds*, p. 242 (1889); *Campbell, Nests & Eggs Austr. Birds*, i. p. 340 (1901).

Neositta pileata, *Sharpe, Hand-l.* iv. p. 352 (1903).

The eggs of the Black-capped Creeper resemble those of *N. chrysoptera*, but are rather larger and more coarsely blotched. They measure from .68 to .71 in length, and from .52 to .55 in breadth.

5. South Australia.

Gould Coll.

Family **CERTHIIDÆ**.Genus **CERTHIA**, *Linn.***Certhia familiaris**, *Linn.*

Certhia familiaris, *Thien. Fortpflanz. ges. Vög.* tab. xvii. fig. 10, a-c (1845-54); *Baedeker, Eier Eur. Vög.* tab. 43. fig. 2 (1855-63); *Hewitson, Eggs of Brit. Birds*, i. p. 243, pl. lxii. fig. ii (1856); *Saunders, Ibis*, 1871, p. 208; *Dresser, Birds Eur.* iii. p. 195 (1874); *Gadow, Cat. Birds B. M.* viii. p. 323 (1883); *Seebohm, Brit. Birds*, i. p. 512, pl. 11 (1883); *id. Eggs of Brit. Birds*, p. 217, pl. 54. fig. 5 (1896); *Sharpe, Hand-l.* iv. p. 353 (1903).

Certhia brachydactyla, *Baedeker, tom. cit.* tab. 43. fig. 3.

Certhia costæ, *Baedeker, tom. cit.* tab. 43. fig. 4.

The eggs of the Common Creeper are of a pointed oval shape and slightly glossy. They are white or pale cream-colour, speckled and spotted with rusty reddish brown and underlying lavender. In

the majority of the eggs, the markings are dense at the broad end and sparse elsewhere; in some specimens they are pretty evenly distributed over the entire surface of the shell. In some clutches, the markings consist entirely of fine specks; in others of coarse spots, combined with specks. Specimens measure from .57 to .7 in length, and from .43 to .5 in breadth.

Certhia hodgsoni, *Brooks*.

(Plate XIV. fig. 19.)

Certhia familiaris, *Gadow, Cat. Birds B. M.* viii. p. 323, part. (1883).

Certhia hodgsoni, *Oates, Fauna Brit. Ind., Birds*, i. p. 329 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 220 (1889); *Sharpe, Hand-l.* iv. p. 355 (1903).

The egg of Hodgson's Tree-Creeper in the Collection is of a blunt oval shape and slightly glossy. It is white, densely mottled all over with reddish brown and lavender. This specimen is easily separable from the eggs of *C. familiaris* by reason of the density of its markings. It measures .65 by .49.

1. Kashmir, 5th June (*W. E. Brooks*). Hume Coll.

Genus *SALPORNIS*, *Gray*.

Salpornis spilonotus, *Frankl.*

(Plate XIV. fig. 20.)

Salpornis spilonotus, *Gadow, Cat. Birds B. M.* viii. p. 330 (1883); *Oates, Fauna Brit. Ind., Birds*, i. p. 333 (1889); *id. ed. Hume, Nests & Eggs Ind. Birds*, i. p. 220 (1889); *Sharpe, Hand-l.* iv. p. 355 (1903).

An egg of the Spotted Grey Creeper in the Collection is of a blunt oval shape and moderately glossy. It is pale greenish grey, speckled and spotted, chiefly on the broader half, with blackish brown and lavender-grey. It measures .67 by .52.

EXPLANATION OF THE PLATES.

PLATE I.

- Fig. 1. *Trochalopterum phceniceum*.
2. *Argya subrufa*.
3. *Trochalopterum cachinnans*.
4. *Sibia picaoides*.
5. *Lioptila capistrata*.
6. *Garrulax albigularis*.
7. „ *pectoralis*.
8. *Dryonastes sannio*.
9. *Crateropus bicolor*.
10. *Conostoma cœmodium*.
11. *Calamanthus campestris*.
12. *Actinodura eyertoni*.
13. *Suthora bulomachus*.
14. „ *webbiana*.
15. *Sceorhynchus gularis*.
16. *Pyctorhis sinensis*.
17. *Bernieria madagascariensis*.
18. *Pyctorhis sinensis*.
19. *Timelia jerdoni*.
20. *Pellorneum subochraceum*.
21. „ *ruficeps*.
22. *Ophrydornis albigularis*.

PLATE II.

- Fig. 1. *Turdinus sepiarius*.
 2. „ *macrodactylus*.
 3. *Drymocapthus capistratus*.
 4. „ *capistratoides*.
 5. *Drymochaera badiceps*.
 6. *Setaria albigularis*.
 7. *Pellorneum ignotum*.
 8. *Xanthomixis zosterops*.
 9. *Mixornis woodi*.
 10. *Nesobates madagascariensis*.
 11. *Mixornis montana*.
 12. *Anuropsis malaccensis*.
 13. *Crateroscelis murina*.
 14. *Rimator malacoptilus*.
 15. *Pseudominla castaneiceps*.
 16. *Schœnioparus rufigularis*.
 17. „ *dubius*.
 18. *Ixulus flavicollis*.
 19. *Proparus vinipectus*.
 20. *Alcippe phayrei*.

PLATE III.

- Fig. 1. *Sphenæacus africanus*.
 2. *Pterythius erythropterus*.
 3. „ *ærealatus*.
 4. *Lioptila gracilis*.
 5. *Staphidia castaneiceps*.
 6. *Stachyrhidopsis rufifrons*.
 7. *Heteroxenicus carolinæ*.
 8. *Stachyrhidopsis rufifrons*.
 9. *Turdinulus roberti*.
 10. *Corythocichla striata*.
 11. *Eupetes loria*.
 12. *Pellorneum palustre*.

- Fig. 13. *Lamprolia victorice*.
 14. *Cinclosoma castanonotum*.
 15. *Arrenga blighi*.
 16. *Drymacædus superciliaris*.
 17. *Hylacola cauta*.
 18. *Pterorhinus davidi*.
 19. *Trochalopterum variegatum*.
 20. *Heteroxenicus sinensis*.

PLATE IV.

- Fig. 1. }
 2. } *Alcippe nipalensis*.
 3. }
 4. }
 5. *Yuhina pallida*.
 6. *Rhopocichla atriceps*.
 7. *Alcippe phaeocephala*.
 8. *Rhopocichla nigrifrons*.
 9. *Yuhina nigrimentum*.
 10. *Mesia argentauris*.
 11. *Proparus cinereiceps*.
 12. *Siva cyanuroptera*.
 13. *Liothrix calipygus*.
 14. *Oreoscoptes montanus*.
 15. *Mimus modulator*.
 16. ,, *orpheus*.
 17. ,, *longicaudatus*.
 18. *Toxostoma bendirei*.
 19. ,, *curvirostre*.
 20. ,, *lecontei*.
 21. ,, *crissale*.

PLATE V.

- Fig. 1. *Heleodytes couesi*.
 2. *Thryothorus grenadensis*.
 3. *Troglodytes striatulus*.
 4. *Thryophilus nigricapillus*.
 5. *Platycephala flavipes*.
 6. *Cochou viridis*.
 7. *Merula ludovicæ*.
 8. „ *nigrirostris*.
 9. „ *nigropileus*.
 10. „ *falklandica*.
 11. „ *nigropileus*.
 12. „ *samoensis*.
 13. „ *gymnophthalmus*.
 14.) „ *erythropleura*.
 15. {
 16. „ *gymnophthalmus*.
 17. *Mimocichla rubripes*.
 18. *Merula nigrorum*.
 19. „ *poliocephala*.

PLATE VI.

- Fig. 1. *Merula cardis*.
 2. „ *xanthopus*.
 3. „ *layardi*.
 4. „ *cardis*.
 5. „ *olivacea*.
 6. *Semimerula gigas*.
 7. *Merula olivacea*.
 8. *Geocichla citrina*.
 9. *Oreocichla papuensis*.
 10. „ *dauma*.
 11. *Turdus pallidus*.
 12. *Geocichla wardi*.
 13. *Oreocichla mollissima*.

- Fig. 14. *Zoothera marginata*.
 15. *Turdus chrysolaus*.
 16. }
 17. } „ *castaneus*.
 18. „ *chrysolaus*.

PLATE VII.

- Fig. 1. *Erithacus akahige*.
 2. *Petrophila rupestris*.
 3. „ *erythrogaster*.
 4. *Larvivora brunnea*.
 5. *Phœnicurus auroreus*.
 6. *Saxicola lugens*.
 7. „ *familiaris*.
 8. *Adelura cœruleocephala*.
 9. *Polioecichla sinuata*.
 10. *Campicola pileata*.
 11. *Petrophila cinclorhyncha*.
 12. *Saxicola monticola*.
 13. *Cercomela asthenia*.
 14. *Aedon golzii*.
 15. *Cittocincla luzoniensis*.
 16. *Myiodesetes ralloides*.
 17. *Erythropygia coryphæus*.
 18. }
 19. } *Oreicola ferrea*.
 20. *Rhyacornis fuliginosa*.
 21. *Tharrhaleus rubidus*.

PLATE VIII.

- Fig. 1. }
 2. }
 3. } *Merula merula*.
 4. }
 5. *Aedon megarhyncha*.

- Fig. 6. *Erethacus rubecula*.
 7. *Merula merula*.
 8. *Erethacus rubecula*.
 9. *Aedon megarhyncha*.
 10. *Sylvia atricapilla*.
 11. „ *sylvia*.
 12. *Hylocichla musica*.
 13. *Sylvia simplex*.
 14. „ *atricapilla*.
 15.)
 16.) *Hylocichla musica*.
 17.)
 18.)
 19. *Turdus pilaris*.
 20. *Acrocephalus streperus*.
 21. *Locustella naevia*.
 22. *Turdus pilaris*.

PLATE IX.

- Fig. 1. *Acrocephalus dumetorum*.
 2.)
 3.) *Agrobates familiaris*.
 4. *Acrocephalus dumetorum*.
 5. *Tribura thoracica*.
 6.)
 7.) *Acrocephalus syrinx*.
 8. *Tribura thoracica*.
 9. *Locustella lanceolata*.
 10. *Sutoria maculicollis*.
 11. *Orthotomus atrigularis*.
 12. „ *chloronotus*.
 13.)
 14.) *Cisticola ruficapilla*.
 15. „ *strangei*.
 16. „ *lugubris*.
 17. *Franklinia buchanani*.

- Fig. 18. *Chaetornis locustelloides*.
 19. *Megalurus ruficeps*.
 20. *Laticilla burnesi*.

PLATE X.

- Fig. 1. *Calamocichla leptorhyncha*.
 2. *Iduna languida*.
 3. *Sylvia affinis*.
 4. „ *mystacea*.
 5. } *Reguloides humei*.
 6. }
 7. *Arundinax aedon*.
 8. *Acanthiza inornata*.
 9. „ *apicalis*.
 10. *Sericornis frontalis*.
 11. }
 12. } „ *humilis*.
 13. „ *frontalis*.
 14. *Acanthiza lineata*.
 15. *Apalis thoracica*.
 16. *Dryodromas fulvicapilla*.
 17. *Neomixis tenella*.
 18. *Scotocerca saharae*.
 19. *Horornis brunnescens*.
 20. *Neornis flavo-olivacea*.
 21. *Suya khasiana*.

PLATE XI.

- Fig. 1. *Prinia mystacea*.
 2. „ *polychroa*.
 3. *Burnesia substriata*.
 4. „ *superciliaris*.
 5. *Malurus splendens*.
 6. „ *dorsalis*.
 7. *Sphenura longirostris*.

- Fig. 8. *Stipiturus malachurus*.
 9. *Bebrornis rodericanus*.
 10. *Artamus fuscus*.
 11. *Vireo flavifrons*.
 12. „ *modestus*.
 13. *Artamus mentalis*.
 14. *Tephrodornis pelvicus*.
 15. *Artamus superciliosus*.
 16. „ *hypoleucus*.
 17. *Abbottornis chabert*.
 18. *Vanga curvirostris*.
 19. *Hemipus capitalis*.
 20. „ *picatus*.
 21. *Tephrodornis gularis*.

PLATE XII.

- Fig. 1. *Tephrodornis pondicerianus*.
 2. }
 3. } *Collyriocichla brunnea*.
 4. *Tephrodornis pondicerianus*.
 5. *Eurocephalus anguitimens*.
 6. *Hypocolius ampelinus*.
 7. *Pinarolestes vitiensis*.
 8. „ *rustiventris*.
 9. *Cracticus cassicus*.
 10. „ *quoyi*.
 11. „ *leucopterus*.
 12. *Fiscus excubitorius*.
 13. „ *humeralis*.
 14. *Lanius pallidirostris*.
 15. *Rhodophoneus cruentus*.
 16. *Lanius algeriensis*.
 17. *Pomatorhynchus blanfordi*.
 18. *Cephalophoneus bucephalus*.
 19. *Enneoctonus vittatus*.
 20. *Pomatorhynchus blanfordi*.

PLATE XIII.

- Fig. 1. *Cephalophoneus caniceps*.
 2. *Fiscus caudatus*.
 3. *Cephalophoneus bentet*.
 4. *Otomela phœnicuroides*.
 5. *Eopsaltria flaviventris*.
 6. *Laniarius rufiventris*.
 7. *Pomatorhynchus senegalus*.
 8. *Chlorophoneus sulphureipectus*.
 9. *Pomatorhynchus australis*.
 10. „ *tschagra*.
 11. *Oreoica cristata*.
 12. *Falcunculus leucogaster*.
 13. *Pachycephala xanthoprocta*.
 14. „ *rosseliana*.
 15. „ *chlorura*.
 16. *Laniarius atrococcineus*.
 17. *Pachycephala obscurior*.
 18. *Hyloterpe philippinensis*.
 19. *Pachycephala xanthotræa*.
 20. *Pachycephalopsis poliosoma*.

PLATE XIV.

- Fig. 1. *Periparus melanolophus*.
 2. *Muchlolophus rex*.
 3. *Parus monticola*.
 4. *Pardaliparus venustulus*.
 5. *Cyanistes cyanus*.
 6. „ *teneriffæ*.
 7. *Pentheres afer*.
 8. *Auriparus flaviceps*.
 9. *Regulus maderensis*.
 10. „ *teneriffæ*.
 11. *Ægithaliscus erythrocephalus*.
 12. *Regulus maderensis*.

- Fig. 13. *Sitta castaneiventris*.
14. „ *leucopsis*.
15. „ *whitcheadi*.
16. „ *pygmæa*.
17. *Neositta pileata*.
18. *Dendrophila frontalis*.
19. *Certhia hodgsoni*.
20. *Salpornis spilonotus*.

PASSERIFORMES: PARIDÆ, REGULIDÆ,
SITTIDÆ, CETHIIDÆ.

LIST OF THE CURRENT NATURAL HISTORY PUBLICATIONS OF THE TRUSTEES OF THE BRITISH MUSEUM.

The following publications can be purchased through the Agency of *Messrs. LONGMANS & Co.*, 39, *Paternoster Row*; *Mr. QUARITCH*, 15, *Piccadilly*; *Messrs. KEGAN PAUL, TRENCH, TRÜBNER & Co.*, *Dryden House*, 43, *Gerrard Street, Soho, W.*; and *Messrs. DULAU & Co.*, 37, *Soho Square*; or at the NATURAL HISTORY MUSEUM, *Cromwell Road, London, S.W.*

The History of the Collections contained in the Natural History Departments of the British Museum. Vol. I. Libraries; Botany; Geology; Minerals. Pp. xvii., 442. 1904, 8vo. 15s.

Catalogue of the Books, Manuscripts, Maps, and Drawings in the British Museum (Natural History). Compiled by B. B. Woodward, Assistant in charge of the General Library, with some clerical assistance:—

Vol. I. A—D. Pp. viii., 500. 1903, 4to. 20s.

Vol. II. E—K. Pp. 501–1038. 1904, 4to. 20s.

Catalogue of the Specimens and Drawings of Mammals, Birds, Reptiles, and Fishes of Nepal and Tibet. Presented by B. H. Hodgson, Esq., to the British Museum. 2nd edition. By John Edward Gray. Pp. xii., 90. [With an account of the Collection by Mr. Hodgson.] 1863, 12mo. 2s. 3d.

Catalogue of the Mammalia and Birds of New Guinea in the Collection of the British Museum. [With list of Species of New Guinea Birds, and those of the neighbouring Localities.] By John Edward Gray, Ph.D., F.R.S., and George Robert Gray, F.L.S., &c. Pp. 63. Woodcuts. 1859, 8vo. 1s. 6d.

Report on the Zoological Collections made in the Indo-Pacific Ocean during the voyage of H.M.S. "Alert," 1881–2. Pp. xxv., 684. 54 Plates. 1884, 8vo. 1l. 10s.

Summary of the Voyage...	By Dr. R. W. Coppinger.
Mammalia	" O. Thomas.
Aves...	" R. B. Sharpe.
Reptilia, Batrachia, Pisces	" A. Günther.
Mollusca	" E. A. Smith.
Echinodermata	" F. J. Bell.
Crustacea	" E. J. Miers.
Coleoptera	" C. O. Waterhouse.
Lepidoptera	" A. G. Butler.
Alcyonaria and Spongiida	" S. O. Ridley.

Report on the Collections of Natural History made in the Antarctic Regions during the Voyage of the "Southern Cross." Pp. ix., 344. 53 Plates. 1902, Royal 8vo. 2l.

Mammalia	By Capt. G. E. H. Barrett-Hamilton.
Notes on Antarctic Seals	" E. A. Wilson, M.B.
Extracts from the "Diary" { of the late Nicolai Hanson. }	—
Aves	" Dr. R. Bowdler Sharpe.
Pisces... ..	" G. A. Boulenger, F.R.S.
Tunicata	" Prof. W. A. Herdman, F.R.S.
Mollusca	" E. A. Smith.
Echinoderma	" Prof. F. J. Bell.
Insecta	" G. H. Carpenter and Hon. N. C. Rothschild.
Arachnida	" Dr. E. L. Trouessart.
Crustacea	" T. V. Hodgson.
Polychæta	" Dr. A. Willey.
Gephyrea	" A. E. Shipley.
Nematoda	" Dr. von Linstow.
Cestoda	"
Polyzoa	"
Porifera	" R. Kirkpatrick.
Anthozoa	" Dr. L. Roule and S. J. Hickson, F.R.S.
Actiniæ	" J. A. Clubb.
Hydrozoa	" E. T. Browne
Cryptogamia	" A. Gepp, V. H. Blackman, and Miss E. S. Barton.
Rock Specimens	" G. T. Prior.

A Monograph of Christmas Island (Indian Ocean) : Physical Features and Geology by C. W. Andrews, B.A., B.Sc., F.G.S., with descriptions of the Fauna and Flora by numerous contributors. Pp. xv., 337: 22 plates (7 coloured), a map, and 27 illustrations in text. [With Index.] 1900, 8vo. 20s.

First Report on Economic Zoology. By Fred. V. Theobald, M.A., &c. [With an Introduction, containing a Classification of Animals from the point of view of Economic Zoology, by Prof. E. Ray Lankester, LL.D., F.R.S.] Pp. xxxiv., 192. 18 Woodcuts. 1903, Roy. 8vo. 6s.

Second Report on Economic Zoology. By Fred. V. Theobald, M.A., &c. Pp. x., 197. 29 Illustrations. 1904, Roy. 8vo. 6s.

MAMMALS.

Catalogue of the Bones of Mammalia in the Collection of the British Museum. By Edward Gerrard. Pp. iv., 296. 1862, 8vo. 5s.

Catalogue of Monkeys, Lemurs, and Fruit-eating Bats in the Collection of the British Museum. By Dr. J. E. Gray, F.R.S., &c. Pp. viii., 137. 21 Woodcuts. 1870, 8vo. 4s.

Catalogue of Carnivorous, Pachydermatous, and Edentate Mammalia in the British Museum. By John Edward Gray, F.R.S., &c. Pp. vii., 398. 47 Woodcuts. 1869. 8vo. 6s. 6d.

Catalogue of Seals and Whales in the British Museum. By John Edward Gray, F.R.S., &c. 2nd Edition. Pp. vii., 402. 101 Woodcuts. 1866, 8vo. 8s.

——— Supplement. By John Edward Gray, F.R.S., &c., Pp. vi., 103. 11 Woodcuts. 1871, 8vo. 2s. 6d.

List of the Specimens of Cetacea in the Zoological Department of the British Museum. By William Henry Flower, LL.D., F.R.S., &c. [With Systematic and Alphabetical Indexes.] Pp. iv., 36. 1885, 8vo. 1s. 6d.

Catalogue of Ruminant Mammalia (*Pecora*, Linnæus) in the British Museum. By John Edward Gray, F.R.S., &c. Pp. viii., 102. 4 Plates. 1872, 8vo. 3s. 6d.

Catalogue of the Marsupialia and Monotremata in the Collection of the British Museum. By Oldfield Thomas. Pp. xiii., 401. 4 Coloured and 24 plain Plates. [With Systematic and Alphabetical Indexes.] 1888, 8vo. 1l. 8s.

BIRDS.

Catalogue of the Birds in the British Museum :—

Vol. VI. Catalogue of the Passeriformes, or Perching Birds, in the Collection of the British Museum. *Cichlomorphæ* : Part III., containing the first portion of the family Timeliidæ (Babbling Thrushes). By R. Bowdler Sharpe. Pp. xiii., 420. Woodcuts and 18 coloured Plates. [With Systematic and Alphabetical Indexes.] 1881, 8vo. 1l.

Vol. VII. Catalogue of the Passeriformes, or Perching Birds, in the Collection of the British Museum. *Cichlomorphæ* : Part IV., containing the concluding portion of the family Timeliidæ (Babbling Thrushes). By R. Bowdler Sharpe. Pp. xvi., 698. Woodcuts and 15 coloured Plates. [With Systematic and Alphabetical Indexes.] 1883, 8vo. 1l. 6s.

Vol. VIII. Catalogue of the Passeriformes, or Perching Birds, in the Collection of the British Museum. *Cichlomorphæ* : Part V., containing the families Paridæ and Laniidæ (Titmice and Shrikes); and *Certhiomorphæ* (Creepers and Nuthatches). By Hans Gadow, M.A., Ph.D. Pp. xiii., 386. Woodcuts and 9 coloured Plates. [With Systematic and Alphabetical Indexes.] 1883, 8vo. 17s.

Catalogue of the Birds in the British Museum—*continued*.

Vol. IX. Catalogue of the Passeriformes, or Perching Birds, in the Collection of the British Museum. *Cinnyrimorphæ*, containing the families Nectariniidæ and Meliphagidæ (Sun Birds and Honey-eaters). By Hans Gadow, M.A., Ph.D. Pp. xii., 310. Woodcuts and 7 coloured Plates. [With Systematic and Alphabetical Indexes.] 1884, 8vo. 14s.

Vol. X. Catalogue of the Passeriformes, or Perching Birds, in the Collection of the British Museum. *Fringilliformes*: Part I., containing the families Dicaeidæ, Hirundinidæ, Ampelidæ, Mnioiltidæ, and Motacillidæ. By R. Bowdler Sharpe. Pp. xiii., 682. Woodcuts and 12 coloured Plates. [With Systematic and Alphabetical Indexes.] 1885, 8vo. 17. 2s.

Vol. XI. Catalogue of the Passeriformes, or Perching Birds, in the Collection of the British Museum. *Fringilliformes*: Part II., containing the families Cœrebidæ, Tanagridæ, and Icteridæ. By Philip Lutley Sclater, M.A., F.R.S. Pp. xvii., 431. Woodcuts and 18 coloured Plates. [With Systematic and Alphabetical Indexes.] 1886, 8vo. 17.

Vol. XII. Catalogue of the Passeriformes, or Perching Birds, in the Collection of the British Museum. *Fringilliformes*: Part III., containing the family Fringillidæ. By R. Bowdler Sharpe. Pp. xv., 871. Woodcuts and 16 coloured Plates. [With Systematic and Alphabetical Indexes.] 1888, 8vo. 17. 8s.

Vol. XIII. Catalogue of the Passeriformes, or Perching Birds, in the Collection of the British Museum. *Sturniformes*, containing the families Artamidæ, Sturnidæ, Ploceidæ, and Alaudidæ. Also the families Atrichiidæ and Menuridæ. By R. Bowdler Sharpe. Pp. xvi., 701. Woodcuts and 15 coloured Plates. [With Systematic and Alphabetical Indexes.] 1890, 8vo. 17. 8s.

Vol. XIV. Catalogue of the Passeriformes, or Perching Birds, in the Collection of the British Museum. *Oligomyodæ*, or the families Tyrannidæ, Oxyrhamphidæ, Pipridæ, Cotingidæ, Phytotomidæ, Philepittidæ, Pittidæ, Xenicidæ, and Eurylæmidæ. By Philip Lutley Sclater, M.A., F.R.S. Pp. xix., 494. Woodcuts and 26 coloured Plates. [With Systematic and Alphabetical Indexes.] 1888, 8vo. 17. 4s.

Catalogue of the Birds in the British Museum—*continued*.

- Vol. XV. Catalogue of the Passeriformes, or Perching Birds, in the Collection of the British Museum. *Tracheophonæ*, or the families Dendrocolaptidæ, Formicariidæ, Conopophagidæ, and Pteroptochidæ. By Philip Lutley Selater, M.A., F.R.S. Pp. xvii., 371. Woodcuts and 20 coloured Plates. [With Systematic and Alphabetical Indexes.] 1890, 8vo. 1*l*.
- Vol. XVI. Catalogue of the Picariæ in the Collection of the British Museum. *Upupæ* and *Trochili*, by Osbert Salvin. *Coraciæ*, of the families Cypselidæ, Caprimulgidæ, Podargidæ, and Steatornithidæ, by Ernst Hartert. Pp. xvi., 703. Woodcuts and 14 coloured Plates. [With Systematic and Alphabetical Indexes.] 1892, 8vo. 1*l*. 16*s*.
- Vol. XVII. Catalogue of the Picariæ in the Collection of the British Museum. *Coraciæ* (contin.) and *Halcyones*, with the families Leptosomatidæ, Coraciidæ, Meropidæ, Alcedinidæ, Momotidæ, Totidæ and Coliidæ, by R. Bowdler Sharpe. *Bucerotes* and *Trogones*, by W. R. Ogilvie Grant. Pp. xi., 522. Woodcuts and 17 coloured Plates. [With Systematic and Alphabetical Indexes.] 1892, 8vo. 1*l*. 10*s*.
- Vol. XVIII. Catalogue of the Picariæ in the Collection of the British Museum. *Scansores*, containing the family Picidæ. By Edward Hargitt. Pp. xv., 597. Woodcuts and 15 coloured Plates. [With Systematic and Alphabetical Indexes.] 1890, 8vo. 1*l*. 6*s*.
- Vol. XIX. Catalogue of the Picariæ in the Collection of the British Museum. *Scansores* and *Coccyges*: containing the families Rhamphastidæ, Galbulidæ, and Bueconidæ, by P. L. Selater; and the families Indicatoridæ, Capitonidæ, Cuculidæ, and Musophagidæ, by G. E. Shelley. Pp. xii., 484: 13 coloured Plates. [With Systematic and Alphabetical Indexes.] 1891, 8vo. 1*l*. 5*s*.
- Vol. XX. Catalogue of the Psittaci, or Parrots, in the Collection of the British Museum. By T. Salvadori. Pp. xvii., 658. Woodcuts and 18 coloured Plates. [With Systematic and Alphabetical Indexes.] 1891, 8vo. 1*l*. 10*s*.
- Vol. XXI. Catalogue of the Columbæ, or Pigeons, in the Collection of the British Museum. By T. Salvadori. Pp. xvii., 676. 15 coloured Plates. [With Systematic and Alphabetical Indexes.] 1893, 8vo. 1*l*. 10*s*.
- Vol. XXII. Catalogue of the Game Birds (*Pterocletes*, *Gallinæ*, *Opisihocomi*, *Hemipodii*) in the Collection of the British Museum. By W. R. Ogilvie Grant. Pp. xvi., 585. 8 coloured Plates. [With Systematic and Alphabetical Indexes.] 1893, 8vo. 1*l*. 6*s*.

Catalogue of the Birds in the British Museum—*continued*.

- Vol. XXIII. Catalogue of the Fulicariæ (Rallidæ and Heliornithidæ) and Alectorides (Aramidæ, Eurypygidæ, Mesitidæ, Rhinochetidæ, Gruidæ, Psophiidæ, and Otididæ) in the Collection of the British Museum. By R. Bowdler Sharpe. Pp. xiii., 353. 9 coloured Plates. [With Systematic and Alphabetical Indexes.] 1894, 8vo. 20s.
- Vol. XXIV. Catalogue of the Limicolæ in the Collection of the British Museum. By R. Bowdler Sharpe. Pp. xii., 794. Woodcuts and 7 coloured Plates. [With Systematic and Alphabetical Indexes.] 1896, 8vo. 17. 5s.
- Vol. XXV. Catalogue of the Gaviæ and Tubinares in the Collection of the British Museum. Gaviæ (Terns, Gulls, and Skuas), by Howard Saunders. Tubinares (Petrels and Albatrosses), by Osbert Salvin. Pp. xv., 475. Woodcuts and 8 coloured Plates. [With Systematic and Alphabetical Indexes.] 1896, 8vo. 17. 1s.
- Vol. XXVI. Catalogue of the Plataleæ, Herodiones, Steganopodes, Pygopodes, Alcæ, and Impennes in the Collection of the British Museum. Plataleæ (Ibises and Spoonbills) and Herodiones (Heron and Storks), by R. Bowdler Sharpe. Steganopodes (Cormorants, Gannets, Frigate-birds, Tropic-birds, and Pelicans), Pygopodes (Divers and Grebes), Alcæ (Auks), and Impennes (Penguins), by W. R. Ogilvie-Grant. Pp. xvii., 687. Woodcuts and 14 coloured Plates. [With Systematic and Alphabetical Indexes.] 1898, 8vo. 17. 5s.
- Vol. XXVII. Catalogue of the Chenomorphæ (Palamedæ, Phœnicopteri, Anseres), Crypturi, and Ratitæ in the Collection of the British Museum. By T. Salvadori. Pp. xv., 636. 19 coloured Plates. [With Systematic and Alphabetical Indexes.] 1895, 8vo. 17. 12s.
- A Hand-list of the Genera and Species of Birds. [Nomenclator Avium tum Fossilium tum Viventium.] By R. Bowdler Sharpe, LL.D. :—
- Vol. I. Pp. xxi., 303. [With Systematic Index.] 1899, 8vo. 10s.
- Vol. II. Pp. xv., 312. [With Systematic Index, and an Alphabetical Index to Vols. I. and II.] 1900, 8vo. 10s.
- Vol. III. Pp. xii., 367. [With Systematic and Alphabetical Indexes.] 1901, 8vo. 10s.
- Vol. IV. Pp. xii., 391. [With Systematic and Alphabetical Indexes.] 1903, 8vo. 10s.

List of the Specimens of Birds in the Collection of the British Museum. By George Robert Gray :—

Part III., Section I. Ramphastidæ. Pp. 16. [With Index.] 1855, 12mo. 6*d*.

Part III., Section II. Psittacidæ. Pp. 110. [With Index.] 1859, 12mo. 2*s*.

Part III., Sections III. and IV. Capitonidæ and Picidæ. Pp. 137. [With Index.] 1868, 12mo. 1*s*. 6*d*.

Part IV. Columbæ. Pp. 73. [With Index.] 1856, 12mo. 1*s*. 9*d*.

Part V. Gallinæ. Pp. iv., 120. [With an Alphabetical Index.] 1867, 12mo. 1*s*. 6*d*.

Catalogue of the Birds of the Tropical Islands of the Pacific Ocean in the Collection of the British Museum. By George Robert Gray, F.L.S., &c. Pp. 72. [With an Alphabetical Index.] 1859, 8vo. 1*s*. 6*d*.

Catalogue of the Collection of Birds' Eggs in the British Museum (Natural History) :—

Vol. I. Ratitæ. Carinatæ (Tinamiformes—Lariformes). By Eugene W. Oates. Pp. xxiii., 252. 18 Coloured Plates. [With Systematic and Alphabetical Indexes.] 1901, 8vo. 30*s*.

Vol. II. Carinatæ (Charadriiformes—Strigiformes). By Eugene W. Oates. Pp. xx., 400. 15 Coloured Plates. [With Systematic and Alphabetical Indexes.] 1902, 8vo. 30*s*.

Vol. III. Carinatæ (Psittaciformes—Passeriformes). By Eugene W. Oates and Capt. Savile G. Reid. Pp. xxiii., 349. 10 Coloured Plates. [With Systematic and Alphabetical Indexes.] 1903, 8vo. 25*s*.

REPTILES.

Catalogue of the Tortoises, Crocodiles, and Amphisbænians in the Collection of the British Museum. By Dr. J. E. Gray, F.R.S., &c. Pp. viii., 80. [With an Alphabetical Index.] 1844, 12mo. 1*s*.

Catalogue of Shield Reptiles in the Collection of the British Museum. By John Edward Gray, F.R.S., &c.:—

Appendix. Pp. 28. 1872, 4to. 2*s*. 6*d*.

Part II. Emydosaurians, Rhynchocephalia, and Amphisbænians. Pp. vi., 41. 25 Woodcuts. 1872, 4to. 3*s*. 6*d*.

Hand-List of the Specimens of Shield Reptiles in the British Museum. By Dr. J. E. Gray, F.R.S., F.L.S., &c. Pp. iv., 124. [With an Alphabetical Index.] 1873, 8vo. 4*s*.

Catalogue of the Chelonians, Rhynchocephalians, and Crocodiles in the British Museum (Natural History). New Edition. By George Albert Boulenger. Pp. x., 311. 73 Woodcuts and 6 Plates. [With Systematic and Alphabetical Indexes.] 1889, 8vo. 15s.

Catalogue of the Lizards in the British Museum (Natural History). Second Edition. By George Albert Boulenger :—

Vol. I. Geckonidæ, Eublepharidæ, Uroplatidæ, Pygopodidæ, Agamidæ. Pp. xii., 436. 32 Plates. [With Systematic and Alphabetical Indexes.] 1885, 8vo. 20s.

Vol. II. Iguanidæ, Xenosauridæ, Zonuridæ, Anguidæ, Anniellidæ, Helodermatidæ, Varanidæ, Xantusiidæ, Teiidæ, Amphisbænidæ. Pp. xiii., 497. 24 Plates. [With Systematic and Alphabetical Indexes.] 1885, 8vo. 20s.

Vol. III. Lacertidæ, Gerrhosauridæ, Scincidæ, Anelytropidæ, Dibamidæ, Chamæleontidæ. Pp. xii., 575. 40 Plates. [With a Systematic Index and an Alphabetical Index to the three volumes.] 1887, 8vo. 1*l.* 6s.

Catalogue of the Snakes in the British Museum (Natural History). By George Albert Boulenger, F.R.S., &c. :—

Vol. I., containing the families Typhlopidae, Glauconiidae, Boidæ, Ilysiidæ, Uropeltidæ, Xenopeltidæ, and Colubridæ aglyphæ (part). Pp. xiii., 448 : 26 Woodcuts and 28 Plates. [With Systematic and Alphabetical Indexes.] 1893, 8vo. 1*l.* 1s.

Vol. II., containing the conclusion of the Colubridæ aglyphæ. Pp. xi., 382 : 25 Woodcuts and 20 Plates. [With Systematic and Alphabetical Indexes.] 1894, 8vo. 17s. 6*d.*

Vol. III., containing the Colubridæ (Opisthoglyphæ and Proteroglyphæ), Amblycephalidæ, and Viperidæ. Pp. xiv., 727 : 37 Woodcuts and 25 Plates. [With Systematic Index, and Alphabetical Index to the 3 volumes.] 1896, 8vo. 1*l.* 6s.

Catalogue of Colubrine Snakes in the Collection of the British Museum. By Dr. Albert Günther. Pp. xvi., 281. [With Geographic, Systematic, and Alphabetical Indexes.] 1858, 12mo. 4s.

BATRACHIANS.

Catalogue of the Batrachia Salientia in the Collection of the British Museum. By Dr. Albert Günther. Pp. xvi., 160. 12 Plates. [With Systematic, Geographic, and Alphabetical Indexes.] 1858, 8vo. 6s.

FISHES.

Catalogue of the Fishes in the British Museum. Second edition. Vol. I. Catalogue of the Perciform Fishes in the British Museum. Vol. I. Containing the Centrarchidæ, Percidæ, and Serranidæ (part). By George Albert Boulenger, F.R.S. Pp. xix., 394. Woodcuts and 15 Plates. [With Systematic and Alphabetical Indexes.] 1895, 8vo. 15s.

Catalogue of Fish collected and described by Laurence Theodore Gronow, now in the British Museum. Pp. vii., 196. [With a Systematic Index.] 1854, 12mo. 3s. 6d.

Catalogue of Lophobranchiate Fish in the Collection of the British Museum. By J. J. Kaup, Ph.D., &c. Pp. iv., 80. 4 Plates. [With an Alphabetical Index.] 1856, 12mo. 2s.

MOLLUSCA.

Guide to the Systematic Distribution of Mollusca in the British Museum. Part I. By John Edward Gray, Ph.D., F.R.S., &c. Pp. xii., 230. 121 Woodcuts. 1857, 8vo. 5s.

List of the Shells of the Canaries in the Collection of the British Museum, collected by MM. Webb and Berthelot. Described and figured by Prof. Alcide D'Orbigny in the "Histoire Naturelle des Iles Canaries." Pp. 32. 1854, 12mo. 1s.

List of the Shells of Cuba in the Collection of the British Museum collected by M. Ramon de la Sagra. Described by Prof. Alcide d'Orbigny in the "Histoire de l'Île de Cuba." Pp. 48. 1854, 12mo. 1s.

List of the Shells of South America in the Collection of the British Museum. Collected and described by M. Alcide D'Orbigny in the "Voyage dans l'Amérique Méridionale." Pp. 89. 1854, 12mo. 2s.

Catalogue of the Collection of Mazatlan Shells in the British Museum, collected by Frederick Reigen. Described by Philip P. Carpenter. Pp. xvi., 552. 1857, 12mo. 8s.

List of Mollusca and Shells in the Collection of the British Museum, collected and described by MM. Eydoux and Souleyet in the "Voyage autour du Monde, exécuté pendant les années 1836 et 1837, sur la Corvette 'La Bonite,'" and in the "Histoire naturelle des Mollusques Ptéropodes." Par MM. P. C. A. L. Rang et Souleyet. Pp. iv., 27. 1855, 12mo. 8d.

Catalogue of the Phaneropneumona, or Terrestrial Operculated Mollusca, in the Collection of the British Museum. By Dr. L. Pfeiffer. Pp. 324. [With an Alphabetical Index.] 1852, 12mo. 5s.

Catalogue of Pulmonata, or Air Breathing Mollusca, in the Collection of the British Museum. Part I. By Dr. Louis Pfeiffer. Pp. iv., 192. Woodcuts. 1855, 12mo. 2s. 6d.

Catalogue of the Auriculidæ, Proserpinidæ, and Truncatellidæ in the Collection of the British Museum. By Dr. Louis Pfeiffer. Pp. iv., 150. Woodcuts. 1857, 12mo. 1s. 9d.

List of the Mollusca in the Collection of the British Museum. By John Edward Gray, Ph.D., F.R.S., &c.

Part II. Olividæ. Pp. 41. 1865, 12mo. 1s.

Catalogue of the Conchifera, or Bivalve Shells, in the Collection of the British Museum. By M. Deshayes:—

Part I. Veneridæ, Cyprinidæ, Glauconomidæ, and Petricoladæ. Pp. iv., 216. 1853, 12mo. 3s.

Part II. Petricoladæ (concluded); Corbiculadæ. Pp. 217–292. [With an Alphabetical Index to the two parts.] 1854, 12mo. 6d.

BRACHIOPODA.

Catalogue of Brachiopoda Ancylopoda or Lamp Shells in the Collection of the British Museum. [*Issued as* “Catalogue of the Mollusca, Part IV.”] Pp. iv., 128. 25 Woodcuts. [With an Alphabetical Index.] 1853, 12mo. 3s.

POLYZOA.

Catalogue of Marine Polyzoa in the Collection of the British Museum. Part III. Cyclostomata. By George Busk, F.R.S. Pp. viii., 39. 38 Plates. [With a Systematic Index.] 1875, 8vo. 5s.

CRUSTACEA.

Catalogue of the Specimens of Amphipodous Crustacea in the Collection of the British Museum. By C. Spence Bate, F.R.S., &c. Pp. iv., 399. 58 Plates. [With an Alphabetical Index.] 1862, 8vo. 1l. 5s.

ARACHNIDA.

Descriptive Catalogue of the Spiders of Burma, based upon the Collection made by Eugene W. Oates and preserved in the British Museum. By T. Thorell. Pp. xxxvi., 406. [With Systematic List and Alphabetical Index.] 1895, 8vo. 10s. 6d.

INSECTS.

Coleopterous Insects.

Nomenclature of Coleopterous Insects in the Collection of the British Museum :—

Part VI. Passalidæ. By Frederick Smith. Pp. iv., 23.
1 Plate. [With Index.] 1852, 12mo. 8*d*.

Part VII. Longicornia, I. By Adam White. Pp. iv., 174. 4 Plates. 1853, 12mo. 2*s*. 6*d*.

Part VIII. Longicornia, II. By Adam White. Pp. 237. 6 Plates. 1855, 12mo. 3*s*. 6*d*.

Part IX. Cassididæ. By Charles H. Boheman, Professor of Natural History, Stockholm. Pp. 225. [With Index.] 1856, 12mo. 3*s*.

Illustrations of Typical Specimens of Coleoptera in the Collection of the British Museum. Part I. Lycidæ. By Charles Owen Waterhouse. Pp. x., 83. 18 Coloured Plates. [With Systematic and Alphabetical Indexes.] 1879, 8vo. 16*s*.

Catalogue of the Coleopterous Insects of Madeira in the Collection of the British Museum. By T. Vernon Wollaston, M.A., F.L.S. Pp. xvi., 234 : 1 Plate. [With a Topographical Catalogue and an Alphabetical Index.] 1857, 8vo. 3*s*.

Catalogue of the Coleopterous Insects of the Canaries in the Collection of the British Museum. By T. Vernon Wollaston, M.A., F.L.S. Pp. xiii., 648. [With Topographical and Alphabetical Indexes.] 1864, 8vo. 10*s*. 6*d*.

Catalogue of Halticidæ in the Collection of the British Museum. By the Rev. Hamlet Clark, M.A., F.L.S. Physapodes and Œdipodes. Part I. Pp. xii., 301. Frontispiece and 9 Plates. 1860, 8vo. 7*s*.

Catalogue of Hispidæ in the Collection of the British Museum. By Joseph S. Baly, M.E.S., &c. Part I. Pp. x., 172. 9 Plates. [With an Alphabetical Index.] 1858, 8vo. 6*s*.

Hymenopterous Insects.

Catalogue of Hymenopterous Insects in the Collection of the British Museum. By Frederick Smith. 12mo. :—

Part I. Andrenidæ and Apidæ. Pp. 197. 6 Plates. 1853, 2*s*. 6*d*.

Part II. Apidæ. Pp. 199–465. 6 Plates. [With an Alphabetical Index.] 1854. 6*s*.

Catalogue of Hymenopterous Insects in the British Museum—*continued*.

Part III. Mutillidæ and Pompilidæ. Pp. 206. 6 Plates. 1855. 6s.

Part IV. Sphegidæ, Larridæ, and Crabronidæ. Pp. 207–497. 6 Plates. [With an Alphabetical Index.] 1856. 6s.

Part V. Vespidæ. Pp. 147. 6 Plates. [With an Alphabetical Index.] 1857. 6s.

Part VI. Formicidæ. Pp. 216. 14 Plates. [With an Alphabetical Index.] 1858. 6s.

Part VII. Dorylidæ and Thynnidæ. Pp. 76. 3 Plates. [With an Alphabetical Index.] 1859. 2s.

List of Hymenoptera, with descriptions and figures of the Typical Specimens in the British Museum. Vol. I., Tenthredinidæ and Siricidæ. By W. F. Kirby. Pp. xxviii., 450. 16 Coloured Plates. [With Systematic and Alphabetical Indexes.] 1882, 8vo. 1*l*. 18s.

Dipterous Insects.

List of the Specimens of Dipterous Insects in the Collection of the British Museum. By Francis Walker, F.L.S.

Part VII. Supplement III. Asilidæ. Pp. ii., 507–775. 1855, 12mo. 3s. 6*d*.

A Monograph of the Culicidæ, or Mosquitoes. Mainly compiled from the Collections received at the British Museum from various parts of the world in connection with the Investigation into the cause of Malaria conducted by the Colonial Office and the Royal Society. By Fred. V. Theobald, M.A., &c. :—

Vols. I., II. (pp. xviii., 424; viii., 391 : 318 woodcuts), and Atlas of 37 coloured and 5 collotype plates (pp. viii., with explanations of plates). 1901, 8vo. 3*l*. 3s.

Vol. III. Pp. xvii., 359 : 17 plates, 1 diagram, and 193 illustrations in text. 1903, 8vo. 1*l*. 1s.

A Monograph of the Tsetse-Flies (Genus *Glossina*, Westwood), based on the Collection in the British Museum. By Ernest Edward Austen. With a chapter on Mouth-parts by H. J. Hansen, Phil. Doc. Pp. ix., 319 : 9 plates (7 coloured), 16 woodcuts, 1 map. 1903, Roy. 8vo. 15s.

Lepidopterous Insects.

Catalogue of the Lepidoptera Phalænæ in the British Museum. By Sir George F. Hampson, Bart. :—

Vol. I. Catalogue of the Syntomidæ in the Collection of the British Museum. Pp. xxi., 559 : 285 Woodcuts. [With Systematic and Alphabetical Indexes.] 1898, 8vo. 15s.

—Atlas of 17 Coloured Plates, 8vo. 15s.

Vol. II. Catalogue of the Arctiadæ (Nolinæ, Lithosianæ) in the Collection of the British Museum. Pp. xx., 589 : 411 Woodcuts. [With Systematic and Alphabetical Indexes.] 1900, 8vo. 18s.

—Atlas of 18 Coloured Plates (xviii.—xxxv.), 8vo. 15s.

Vol. III. Catalogue of the Arctiadæ (Arctianæ) and Agaristidæ in the Collection of the British Museum. Pp. xix., 690 : 294 woodcuts. [With Systematic and Alphabetical Indexes.] 1901, 8vo. 15s.

—Atlas of 19 Coloured Plates (xxxvi.—liv.), 8vo. 16s.

Vol. IV. Catalogue of the Noctuidæ. Pp. xx., 689 : 125 woodcuts. [With Systematic and Alphabetical Indexes.] 1903, 8vo. 15s.

—Atlas of 23 Coloured Plates (lv.—lxxvii), 8vo. 16s.

Illustrations of Typical Specimens of Lepidoptera Heterocera in the Collection of the British Museum :—

Part V. By Arthur Gardiner Butler. Pp. xii., 74. 78–100 Coloured Plates. [With a Systematic Index.] 1881, 4to. 2l. 10s.

Part VI. By Arthur Gardiner Butler. Pp. xv., 89. 101–120 Coloured Plates. [With a Systematic Index.] 1886, 4to. 2l. 4s.

Part VII. By Arthur Gardiner Butler. Pp. iv., 124. 121–138 Coloured Plates. [With a Systematic List.] 1889, 4to. 2l.

Part VIII. The Lepidoptera Heterocera of the Nilgiri District. By George Francis Hampson. Pp. iv., 144. 139–156 Coloured Plates. [With a Systematic List.] 1891, 4to. 2l.

Part IX. The Macrolepidoptera Heterocera of Ceylon. By George Francis Hampson. Pp. v., 182. 157–176 Coloured Plates. [With a General Systematic List of Species collected in, or recorded from, Ceylon.] 1893. 4to. 2l. 2s.

Catalogue of the Collection of Palæarctic Butterflies formed by the late John Henry Leech, and presented to the Trustees of the British Museum by his Mother, Mrs. Eliza Leech. By Richard South, F.E.S. Pp. vi., 228. 2 Coloured Plates. With a Portrait and Biographical Memoir of Mr. Leech. 1902, 4to. 1l.

Catalogue of Diurnal Lepidoptera described by Fabricius in the Collection of the British Museum. By Arthur Gardiner Butler, F.L.S., &c. Pp. iv., 303. 3 Plates. 1869, 8vo. 7s. 6d.

Specimen of a Catalogue of Lycænidæ in the British Museum. By W. C. Hewitson. Pp. 15. 8 Coloured Plates. 1862, 4to. 1l. 1s.

List of the Specimens of Lepidopterous Insects in the Collection of the British Museum. By Francis Walker. 12mo. :—

Part XXII. Geometrites. Pp. 499–755. 1861, 3s. 6d.

Part XXIII. ————— Pp. 756–1020. 1861, 3s. 6d.

Part XXIV. ————— Pp. 1021–1280. 1862, 3s. 6d.

Part XXV. ————— Pp. 1281–1477. 1862, 3s.

Part XXVI. ————— Pp. 1478–1796. [With an Alphabetical Index to Parts XX.–XXVI.] 1862, 4s. 6d.

Part XXVII. Crambites and Tortricites. Pp. 1–286. 1863, 4s.

Part XXVIII. Tortricites and Tineites. Pp. 287–561. 1863, 4s.

Part XXIX. Tineites. Pp. 562–835. 1864, 4s.

Part XXX. ————— Pp. 836–1096. [With an Alphabetical Index to Parts XXVII.–XXX.] 1864, 4s.

Part XXXI. Supplement. Pp. 1–321. 1864, 5s.

Part XXXII. ————— Part 2. Pp. 322–706. 1865, 5s.

Part XXXIII. ————— Part 3. Pp. 707–1120. 1865, 6s.

Part XXXIV. ————— Part 4. Pp. 1121–1533. 1865, 5s. 6d.

Part XXXV. ————— Part 5. Pp. 1534–2040. [With an Alphabetical Index to Parts XXXI.–XXXV.] 1866, 7s.

Neuropterous Insects.

Catalogue of the Specimens of Neuropterous Insects in the Collection of the British Museum. By Francis Walker. 12mo. :—

Part II. Sialidæ—Nemopterides. Pp. ii., 193–476. 1853, 3s. 6d.

Part III. Termitidæ—Ephemeridæ. Pp. ii., 477–585. 1853, 1s. 6d.

Catalogue of the Specimens of Neuropterous Insects in the Collection of the British Museum. By Dr. H. Hagen. Part I. Termitina. Pp. 34. 1858, 12mo. 6d.

Orthopterous Insects.

Catalogue of Orthopterous Insects in the Collection of the British Museum. Part I. Phasmidæ. By John Obadiah Westwood, F.L.S., &c. Pp. 195. 48 Plates. [With an Alphabetical Index.] 1859, 4to. 3l.

Catalogue of the Specimens of Blattariæ in the Collection of the British Museum. By Francis Walker, F.L.S., &c. Pp. 239. [With an Alphabetical Index.] 1868, 8vo. 5s. 6d.

Catalogue of the Specimens of Dermaptera Saltatoria in the Collection of the British Museum. By Francis Walker, F.L.S., &c.:—

Part II. Locustidæ (continued). Pp. 225–423. [With an Alphabetical Index.] 1869, 8vo. 4s. 6d.

Part III. Locustidæ (continued).—Acrididæ. Pp. 425–604. [With an Alphabetical Index.] 1870, 8vo. 4s.

Part IV. Acrididæ (continued). Pp. 605–809. [With an Alphabetical Index.] 1870, 8vo. 6s.

Part V. Tettigidæ.—Supplement to the Catalogue of Blattariæ.—Supplement to the Catalogue of Dermaptera Saltatoria (with remarks on the Geographical Distribution of Dermaptera). Pp. 811–850; 43; 116. [With Alphabetical Indexes.] 1870, 8vo. 6s.

Synonymic Catalogue of Orthoptera. By W. F. Kirby. Vol. I. Orthoptera Euplexoptera, Cursoria, et Gressoria. (Forficulidæ, Hemimeridæ, Blattidæ, Mantidæ, Phasmidæ.) Pp. x., 501. [With Index.] 1904, 8vo. 10s.

Hemipterous Insects.

Catalogue of the Specimens of Heteropterous Hemiptera in the Collection of the British Museum. By Francis Walker, F.L.S., &c. 8vo. :—

Part I. Scutata. Pp. 240. 1867. 5s.

Part II. Scutata (continued). Pp. 241–417. 1867. 4s.

Part III. Pp. 418–599. [With an Alphabetical Index to Parts I., II., III., and a Summary of Geographical Distribution of the Species mentioned.] 1868. 4s. 6d.

Part IV. Pp. 211. [With Alphabetical Index.] 1871. 6s.

Part V. Pp. 202. [With Alphabetical Index.] 1872. 5s.

Part VI. Pp. 210. [With Alphabetical Index.] 1873. 5s.

Part VII. Pp. 213. [With Alphabetical Index.] 1873. 6s.

Part VIII. Pp. 220. [With Alphabetical Index.] 1873.
[6s. 6d.]

VERMES.

Catalogue of the Species of Entozoa, or Intestinal Worms, contained in the Collection of the British Museum. By Dr. Baird. Pp. iv., 132. 2 Plates. [With an Index of the Animals in which the Entozoa mentioned in the Catalogue are found, and an Index of Genera and Species.] 1853, 12mo. 2s.

ANTHOZOA.

Catalogue of Sea-pens or Pennatulariidæ in the Collection of the British Museum. By J. E. Gray, F.R.S., &c. Pp. iv., 40. 2 Woodcuts. 1870, 8vo. 1s. 6d.

Catalogue of Lithophytes or Stony Corals in the Collection of the British Museum. By J. E. Gray, F.R.S., &c. Pp. iv., 51. 14 Woodcuts. 1870, 8vo. 3s.

Catalogue of the Madreporarian Corals in the British Museum (Natural History) :—

Vol. I. The Genus *Madrepora*. By George Brook. Pp. xi., 212. 35 Collotype Plates. [With Systematic and Alphabetical Indexes, and Explanation of the Plates.] 1893, 4to. 1l. 4s.

Vol. II. The Genus *Turbinaria*; the Genus *Astræopora*. By Henry M. Bernard, M.A. Cantab., F.L.S., F.Z.S. Pp. iv., 106. 30 Collotype and 3 Lithographic Plates. [With Index of Generic and Specific Names, and Explanation of the Plates.] 1896, 4to. 18s.

Vol. III. The Genus *Montipora*; the Genus *Anacropora*. By Henry M. Bernard, M.A. Pp. vii., 192. 30 Collotype and 4 Lithographic Plates. [With Systematic Index, Index of Generic and Specific Names, and Explanation of the Plates.] 1897, 4to. 1l. 4s.

Vol. IV. The Family *Poritidæ*. I.—The Genus *Goniopora*. By Henry M. Bernard, M.A. Pp. viii., 206. 12 Collotype and 4 Lithographic Plates. [With Index of Generic and Specific Names, and Explanation of the Plates.] 1903, 4to. 1l.

BRITISH ANIMALS.

Catalogue of British Birds in the Collection of the British Museum. By George Robert Gray, F.L.S., F.Z.S., &c. Pp. xii., 248. [With a List of Species.] 1863, 8vo. 3s. 6d.

Catalogue of British Hymenoptera in the Collection of the British Museum. Second edition, Part I. *Andrenidæ* and *Apidæ*. By Frederick Smith, M.E.S. New Issue. Pp. xi., 236. 11 Plates. [With Systematic and Alphabetical Indexes.] 1891, 8vo. 6s.

Catalogue of British Fossorial Hymenoptera, Formicidæ, and Vespidæ in the Collection of the British Museum. By Frederick Smith, V.P.E.S. Pp. 236. 6 Plates. [With an Alphabetical Index.] 1858, 12mo. 6s.

A Catalogue of the British Non-parasitical Worms in the Collection of the British Museum. By George Johnston, M.D., Edin., F.R.C.L., Ed., LL.D., Marischal Coll., Aberdeen, &c. Pp. 365. Woodcuts and 24 Plates. [With an Alphabetical Index.] 1865, 8vo. 7s.

Catalogue of the British Echinoderms in the British Museum (Natural History). By F. Jeffrey Bell, M.A. Pp. xvii., 202. Woodcuts and 16 Plates (2 Coloured). [With Table of Contents, Tables of Distribution, Alphabetical Index, Description of the Plates, &c.] 1892, 8vo. 12s. 6d.

List of the Specimens of British Animals in the Collection of the British Museum: with Synonyma and References to figures. 12mo.:—

Part V. Lepidoptera. By J. F. Stephens. 2nd Edition. Revised by H. T. Stainton and E. Shepherd. Pp. iv., 224. 1856. 1s. 9d.

Part VI. Hymenoptera. By F. Smith. Pp. 134. 1851. 2s.

Part VII. Mollusca, Acephala and Brachiopoda. By Dr. J. E. Gray. Pp. iv., 167. 1851. 3s. 6d.

Part VIII. Fish. By Adam White. Pp. xxiii., 164. (With Index and List of Donors.) 1851. 3s. 6d.

Part IX. Eggs of British Birds. By George Robert Gray. Pp. 143. 1852. 2s. 6d.

Part XI. Anoplura, or Parasitic Insects. By H. Denny. Pp. iv., 51. 1852. 1s.

Part XII. Lepidoptera (continued). By James F. Stephens. Pp. iv., 54. 1852. 9d.

Part XIII. Nomenclature of Hymenoptera. By Frederick Smith. Pp. iv., 74. 1853. 1s. 4d.

Part XIV. Nomenclature of Neuroptera. By Adam White. Pp. iv., 16. 1853. 6d.

Part XV. Nomenclature of Diptera, I. By Adam White. Pp. iv., 42. 1853. 1s.

Part XVI. Lepidoptera (completed). By H. T. Stainton. Pp. 199. [With an Index.] 1854. 3s.

Part XVII. Nomenclature of Anoplura, Euplexoptera, and Orthoptera. By Adam White. Pp. iv., 17. 1855. 6d.

PLANTS.

Illustrations of Australian Plants collected in 1770 during Captain Cook's Voyage round the World in H.M.S. "Endeavour." By the Right Hon. Sir Joseph Banks, Bart., K.B., P.R.S., and Dr. Daniel Solander, F.R.S. [Being a series of lithographic reproductions of copper-plates engraved after paintings by F. P. Nodder, James Miller, J. F. Miller, and John Cleveley.] With Introduction and Determinations by James Britten, F.L.S., Senior Assistant, Department of Botany, British Museum :—

Part I.—101 Plates, with 31 pages of descriptive text. 1900, fol. 25s.

Part II.—142 Plates (pls. 101–243), with 41 pages of descriptive text (pp. 35–75). 1901, fol. 35s.

Part III.—77 Plates (pls. 244–318, 45A, and 122), with 26 pages of descriptive text, including Index to the whole work (pp. 77–102), and 3 maps. 1905, fol. 25s.

Catalogue of the African Plants collected by Dr. Friedrich Welwitsch in 1853–61 :—

Vol. I. Dicotyledons. By William Philip Hiern, M.A., F.L.S., &c. :—

Part I. [Ranunculaceæ to Rhizophoraceæ.] Pp. xxvi., 336. [With Portrait of Dr. Welwitsch. Introduction, Bibliography, and Index of Genera.] 1896, 8vo. 7s. 6d.

Part II. Combretaceæ to Rubiaceæ. Pp. 337–510. [With Index of Genera.] 1898, 8vo. 4s.

Part III. Dipsaceæ to Scrophulariaceæ. Pp. 511–784. [With Index of Genera.] 1898, 8vo. 5s.

Part IV. Lentibulariaceæ to Ceratophylleæ. Pp. 785–1035. [With Index.] 1900, 8vo. 5s.

Vol. II. Monocotyledons, Gymnosperms, and Cryptogams :—

Part I. Monocotyledons and Gymnosperms. By Alfred Barton Rendle, M.A., D.Sc. F.L.S., Assistant, Department of Botany. Pp. 260. [With Index of Genera.] 1899, 8vo. 6s.

Part II. Cryptogamia. Pp. 261–566. [With Table of Errata, and General Index to the whole work.] 1901, 8vo. 6s.

A Monograph of Lichens found in Britain : being a Descriptive Catalogue of the Species in the Herbarium of the British Museum. By the Rev. James M. Crombie, M.A., F.L.S., F.G.S., &c. Part I. Pp. viii., 519 : 74 Woodcuts. [With Glossary, Synopsis, Tabular Conspectus, and Index.] 1894, 8vo. 16s.

A Monograph of the Mycetozoa : being a Descriptive Catalogue of the Species in the Herbarium of the British Museum. By Arthur Lister, F.L.S. Pp. 224. 78 Plates and 51 Woodcuts. [With Synopsis of Genera and List of Species, and Index.] 1894, 8vo. 15s.

List of British Diatomaceæ in the Collection of the British Museum. By the Rev. W. Smith, F.L.S., &c. Pp. iv., 55. 1859, 12mo. 1s.

FOSSILS.

Catalogue of the Fossil Mammalia in the British Museum (Natural History). By Richard Lydekker, B.A., F.G.S. :—

Part I. Containing the Orders Primates, Chiroptera, Insectivora, Carnivora, and Rodentia. Pp. xxx., 268. 33 Woodcuts. [With Systematic and Alphabetical Indexes.] 1885, 8vo. 5s.

Part II. Containing the Order Ungulata, Suborder Artiodactyla. Pp. xxii., 324. 39 Woodcuts. [With Systematic and Alphabetical Indexes.] 1885, 8vo. 6s.

Part III. Containing the Order Ungulata, Suborders Perissodactyla, Toxodontia, Condylarthra, and Amblypoda. Pp. xvi., 186. 30 Woodcuts. [With Systematic Index, and Alphabetical Index of Genera and Species, including Synonyms.] 1886, 8vo. 4s.

Part IV. Containing the Order Ungulata, Suborder Proboscidea. Pp. xxiv., 235. 32 Woodcuts. [With Systematic Index, and Alphabetical Index of Genera and Species, including Synonyms.] 1886, 8vo. 5s.

Part V. Containing the Group Tillodontia, the Orders Sirenia, Cetacea, Edentata, Marsupialia, Monotremata, and Supplement. Pp. xxxv., 345. 55 Woodcuts. [With Systematic Index, and Alphabetical Index of Genera and Species, including Synonyms.] 1887, 8vo. 6s.

Catalogue of the Fossil Birds in the British Museum (Natural History). By Richard Lydekker, B.A. Pp. xxvii., 368. 75 Woodcuts. [With Systematic Index, and Alphabetical Index of Genera and Species, including Synonyms.] 1891, 8vo. 10s. 6d.

Catalogue of the Fossil Reptilia and Amphibia in the British Museum (Natural History). By Richard Lydekker, B.A., F.G.S. :—

Part I. Containing the Orders Ornithosauria, Crocodilia, Dinosauria, Squamata, Rhynchocephalia, and Proterosauria. Pp. xxviii., 309. 69 Woodcuts. [With Systematic Index, and Alphabetical Index of Genera and Species, including Synonyms.] 1888, 8vo. 7s. 6d.

Part II. Containing the Orders Ichthyopterygia and Sauropterygia. Pp. xxi., 307. 85 Woodcuts. [With Systematic Index, and Alphabetical Index of Genera and Species, including Synonyms.] 1889, 8vo. 7s. 6d.

Part III. Containing the Order Chelonina. Pp. xviii., 239. 53 Woodcuts. [With Systematic Index, and Alphabetical Index of Genera and Species, including Synonyms.] 1889, 8vo. 7s. 6d.

Part IV. Containing the Orders Anomodontia, Ecaudata, Caudata, and Labyrinthodontia; and Supplement. Pp. xxiii., 295. 66 Woodcuts. [With Systematic Index, Alphabetical Index of Genera and Species, including Synonyms, and Alphabetical Index of Genera and Species to the entire work.] 1890, 8vo. 7s. 6d.

Catalogue of the Fossil Fishes in the British Museum (Natural History). By Arthur Smith Woodward, LL.D., F.R.S., F.G.S., &c. :—

Part I. Containing the Elasmobranchii. Pp. xlvii., 474. 13 Woodcuts and 17 Plates. [With Alphabetical Index, and Systematic Index of Genera and Species.] 1889, 8vo. 21s.

Part II. Containing the Elasmobranchii (Acanthodii), Holocephali, Ichthyodorulites, Ostracodermi, Dipnoi, and Teleostomi (Crossopterygii and Chondrosteian Actinopterygii). Pp. xlv., 567. 58 Woodcuts and 16 Plates. [With Alphabetical Index, and Systematic Index of Genera and Species.] 1891, 8vo. 21s.

Part III. Containing the Actinopterygian Teleostomi of the Orders Chondrostei (concluded), Protospondyli, Aethespondyli, and Isospondyli (in part). Pp. xlii., 544. 45 Woodcuts and 18 Plates. [With Alphabetical Index, and Systematic Index of Genera and Species.] 1895, 8vo. 21s.

Part IV. Containing the Actinopterygian Teleostomi of the Suborders Isospondyli (in part), Ostariophysi, Apodes, Percesoces, Hemibranchii, Acanthopterygii, and Anacanthini. Pp. xxxix., 636. 22 Woodcuts and 19 Plates. [With Alphabetical Index, and Systematic Index of Genera and Species.] 1901, 8vo. 21s.

Systematic List of the Edwards Collection of British Oligocene and Eocene Mollusca in the British Museum (Natural History), with references to the type-specimens from similar horizons contained in other collections belonging to the Geological Department of the Museum. By Richard Bullen Newton, F.G.S. Pp. xxviii., 365. [With table of Families and Genera, Bibliography, Correlation-table, Appendix, and Alphabetical Index.] 1891, 8vo. 6s.

Catalogue of Tertiary Mollusca in the Department of Geology, British Museum (Natural History). Part I. The Australasian Tertiary Mollusca. By George F. Harris, F.G.S., &c. Pp. xxvi., 407. 8 Plates. [With Table of Families, Genera, and Sub-Genera, and Index.] 1897, 8vo. 10s.

Catalogue of the Fossil Cephalopoda in the British Museum (Natural History) :—

Part I. Containing part of the Suborder Nautiloidea, consisting of the families Orthoceratidæ, Endoceratidæ, Actinoceratidæ, Gomphoceratidæ, Ascoceratidæ, Poterioceratidæ, Cyrtoceratidæ, and Supplement. By Arthur H. Foord, F.G.S. Pp. xxxi., 344. 51 Woodcuts. [With Systematic Index, and Alphabetical Index of Genera and Species, including Synonyms.] 1888, 8vo. 10s. 6d.

Part II. Containing the remainder of the Suborder Nautiloidea, consisting of the families Lituitidæ, Trochoceratidæ, Nautilidæ, and Supplement. By Arthur H. Foord, F.G.S. Pp. xxviii., 407. 86 Woodcuts. [With Systematic Index, and Alphabetical Index of Genera and Species, including Synonyms.] 1891, 8vo. 15s.

Part III. Containing the Bactritidæ, and part of the Suborder Ammonoidea. By Arthur H. Foord, Ph.D., F.G.S., and George Charles Crick, A.R.S.M., F.G.S. Pp. xxxiii., 303. 146 Woodcuts. [With Systematic Index of Genera and Species, and Alphabetical Index.] 1897, 8vo. 12s. 6d.

List of the Types and Figured Specimens of Fossil Cephalopoda in the British Museum (Natural History). By G. C. Crick, F.G.S. Pp. 103. [With Index.] 1898, 8vo. 2s. 6d.

A Catalogue of British Fossil Crustacea, with their Synonyms and the Range in Time of each Genus and Order. By Henry Woodward, F.R.S. Pp. xii., 155. [With an Alphabetical Index.] 1877, 8vo. 5s.

Catalogue of the Fossil Bryozoa in the Department of Geology, British Museum (Natural History):—

The Jurassic Bryozoa. By J. W. Gregory, D.Sc., F.G.S., F.Z.S. Pp. [viii.], 239 : 22 Woodcuts and 11 Plates. [With List of Species and Distribution, Bibliography, Index, and Explanation of Plates.] 1896, 8vo. 10s.

The Cretaceous Bryozoa. Vol. I. By J. W. Gregory, D.Sc., F.G.S., F.Z.S. Pp. xiv., 457 : 64 Woodcuts and 17 Plates. [With Index and Explanation of Plates.] 1899, 8vo. 16s.

Catalogue of the Blastoidea in the Geological Department of the British Museum (Natural History), with an account of the morphology and systematic position of the group, and a revision of the genera and species. By Robert Etheridge, jun., of the Department of Geology, British Museum (Natural History), and P. Herbert Carpenter, D.Sc., F.R.S., F.L.S. (of Eton College). Pp. xv., 322. 20 Plates. [With Preface by Dr. H. Woodward, Table of Contents, General Index, Explanations of the Plates, &c.] 1886, 4to. 25s.

The Genera and Species of Blastoidea, with a List of the Specimens in the British Museum (Natural History). By F. A. Bather, M.A., F.G.S., of the Geological Department. Pp. x., 70. 1 Woodcut. 1899, 8vo. 3s.

Catalogue of the Palæozoic Plants in the Department of Geology and Palæontology, British Museum (Natural History). By Robert Kidston, F.G.S. Pp. viii., 288. [With a list of works quoted, and an Index.] 1886, 8vo. 5s.

Catalogue of the Mesozoic Plants in the Department of Geology, British Museum (Natural History). By A. C. Seward, M.A., F.R.S., F.G.S., University Lecturer in Botany and Fellow of Emanuel College, Cambridge :—

Part I. The Wealden Flora. Part I. Thallophyta—Pteridophyta. Pp. xxxviii., 179. 17 Woodcuts and 11 Plates. [With Alphabetical Index, Explanations of the Plates, &c.] 1894, 8vo. 10s.

Part II. The Wealden Flora. Part II. Gymnospermæ. Pp. viii., 259. 9 Woodcuts and 20 Plates. [With Alphabetical Index, Explanations of the Plates, &c.] 1895, 8vo. 15s.

Part III. The Jurassic Flora. Part I. The Yorkshire Coast. Pp. xii., 341. 53 Woodcuts and 21 Plates. [With Alphabetical Index, Explanations of the Plates, &c.] 1900, 8vo. 20s.

Part IV. The Jurassic Flora. Part II. Liassic and Oolitic Floras of England (excluding the Inferior Oolite Plants of the Yorkshire Coast). Pp. xv., 192. 20 Woodcuts and 13 Plates. [With Alphabetical Index, Explanations of the Plates, &c.] 1904, 8vo. 10s.

GUIDE-BOOKS, ETC.

A General Guide to the British Museum (Natural History), Cromwell Road, London, S.W. With 58 Woodcuts, 2 Plans, 2 views of the building, and an illustrated cover. Pp. 119. 1903, 8vo. 3*d*.

Guide to the Galleries of Mammalia in the Department of Zoology of the British Museum (Natural History). 7th Edition. Pp. 126. 65 Woodcuts and 4 Plans. Index. 1902, 8vo. 6*d*.

Guide to the Gallery of Birds in the Department of Zoology of the British Museum (Natural History), [By W. R. Ogilvie Grant.] Pp. iv., 228. 24 Plates, and 7 Illustrations in text. With Index. 1905, Roy. 8vo. 2*s*. 6*d*.

Guide to the Shell and Starfish Galleries (Mollusca, Polyzoa, Brachiopoda, Tunicata, Echinoderma, and Worms), Department of Zoology, British Museum (Natural History). New Edition. Pp. iv., 129. 125 Woodcuts, Plan and Indexes. 1905, 8vo. 6*d*.

Guide to the Coral Gallery (Protozoa, Porifera or Sponges, Hydrozoa, and Anthozoa) in the Department of Zoology, British Museum (Natural History). Pp. [iv.,] 73. 82 Illustrations, Plan, and Index. 1902, 8vo. 1*s*.

A Guide to the Fossil Mammals and Birds in the Department of Geology and Palæontology in the British Museum (Natural History). 8th Edition. [By A. S. Woodward, LL.D., F.R.S.] Pp. xvi., 100. 6 Plates, 88 Woodcuts. [With List of Illustrations, Table of Stratified Rocks, and Index.] 1904, 8vo. 6*d*.

A Guide to the Fossil Reptiles and Fishes in the Department of Geology and Palæontology in the British Museum (Natural History). [By Henry Woodward, LL.D., F.R.S.] Pp. xiv., 129 : 165 Woodcuts. [With List of Illustrations, Table of Stratified Rocks, and Index.] 1896, 8vo. 6*d*.

A Guide to the Fossil Invertebrates and Plants in the Department of Geology and Palæontology in the British Museum (Natural History). [By Henry Woodward, LL.D., F.R.S.]

Part I. Mollusca to Bryozoa. Pp. xii., 64. 107 Woodcuts. [With List of Illustrations, Table of Stratified Rocks, and Introduction.] 1897, 8vo. 6*d*.

Part II. Insecta to Plants, &c. Pp. ix., 64*-158. Woodcuts 108-182. [With List of Illustrations and Index to the two parts.] 1897, 8vo. 6*d*.

Guide to Sowerby's Models of British Fungi in the Department of Botany, British Museum (Natural History). By Worthington G. Smith, F.L.S. Pp. 82. 93 Woodcuts. With Table of Diagnostic Characters, and Index. [Second Edition.] 1898, 8vo. 4*d*.

Guide to the British Mycetozoa exhibited in the Department of Botany, British Museum (Natural History). By Arthur Lister, F.L.S. [Second Edition.] Pp. 42. 44 Woodcuts. Index. 1903, 8vo. 3*d*.

A Guide to the Mineral Gallery of the British Museum (Natural History). [By L. Fletcher, M.A., F.R.S.] Pp. 32. Plan. 1903, 8vo. 1*d*.

The Student's Index to the Collection of Minerals, British Museum (Natural History). [By L. Fletcher, M.A., F.R.S.] Pp. 32. With a Plan of the Mineral Gallery. 1903, 8vo. 2*d*.

An Introduction to the Study of Minerals, with a Guide to the Mineral Gallery of the British Museum (Natural History). By L. Fletcher, M.A., F.R.S. Pp. 123. 41 Woodcuts. With Plan of the Mineral Gallery and Index. 1903, 8vo. 6*d*.

An Introduction to the Study of Rocks. By L. Fletcher, M.A., F.R.S. Pp. 118. [With plan of the Mineral Gallery, Table of Contents, and Index.] 1898, 8vo. 6*d*.

An Introduction to the Study of Meteorites, with a List of the Meteorites represented in the Collection on January 1st, 1904. By L. Fletcher, M.A., F.R.S., &c. Pp. 109. [With a Plan of the Mineral Gallery, and an Index to the Meteorites represented in the Collection.] 1904, 8vo. 6*d*.

Handbook of Instructions for Collectors, issued by the British Museum (Natural History). With Illustrations. Second Edition. Pp. 138. Index. 1904, 8vo. 1*s*. 6*d*.

Hints on Removing and Preparing Skins of Mammals. Pp. 11. Text illust. [2nd Edition.] 1903, 8vo. 4*d*.

Instructions for the Preservation of Birds. Pp. 10. 5 figures in text. [3rd Edition.] 1904, 8vo. 3*d*.

Instructions for Collecting Reptiles, Batrachians, and Fishes. Pp. 12. [2nd Edition.] 1903, 8vo. 4*d*.

- Instructions for Collecting Insects. Pp. 10. Text illust. [3rd Edition.] 1903, 8vo. 4*d*.
- How to Collect Diptera (Two-winged Flies), with Notes on the Habits of the Perfect Insects and Larvæ. Pp. 16. Text illust. [2nd Edition.] 1903, 8vo. 4*d*.
- How to Collect Mosquitoes (Culicidæ). Pp. 8. 1 Plate, 1 figure in text. [3rd Edition.] 1904, 8vo. 3*d*.
- Blood-sucking Flies, Ticks, &c., and How to Collect them. By E. E. Austen. Pp. 21 : 13 figures in text. 1904, 8vo. 4*d*.
- Instructions for Collecting Arachnida, Myriopoda and Peripatus. Pp. 3. 1900, 8vo. 4*d*.
- Methods of Collecting and Preserving various Soft-bodied Invertebrate Animals; with Hints for Collecting and Preserving Shells of Molluscs. Pp. 15. [2nd Edition.] 1902, 8vo. 4*d*.
- Directions for Collecting and Preserving Plants. Pp. 8. 2 figures in text. [3rd Edition.] 1903, 8vo. 4*d*.
- Suggestions as to Collecting and Preserving Fossils and Minerals. Pp. 9. [2nd Edition.] 1903, 8vo. 4*d*.
